THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations.—This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils,—10 casks, assorted weights now in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co.'s C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft.

Cross Cut Saws.—Hoe & Co.'s C. S., Jackeroll's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet Also, 4 and 4½ feet Tennon Saws.

Axes.—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

For sale by TYLER DAVIDSON & CO.,
mr 3 140 and 142 Main street.

Sales of Stocks and Bonds at Auction,

THE UNDERSIGNED have adopted the mode for the conducting of Sales of

STOCKS AND BONDS AT AUCTION,

Similar to that now in use in the CITY OF CINCINNATI. They are convinced that, by pursuing a method which will satisfy the Public, that all Stocks and Bonds struck off by them at auction as sales, are bona fide such, a business honorable in its character and satisfactory to both buyer and seller, can be conducted, and which will not only meet with the approbation, but also with the support of the public. The undersigned pledge themselves strictly to adhere to the following plan in conducting their sales at auction of Stocks and Bonds:

The vendor will give his confidential instructions to the Auctioneers as to the lowest price at which he will allow his Stocks or Bonds to be sold. They will be offered by Catalogue, as heretofore, but instead of the seller being allowed to make, as they now do, small advance bids on bona fide bidders, the Auctioneers will reserve to themselves the right of making one bid for the protection of and on behalf of the seller, pledging themselves that but ONE BID shall be made; and in all cases where the Stocks or Bonds shall be struck down on their reserved bid, the fact will be publicly announced that no sale was made.

Reporters for the Press will by this method not only be enabled to report real sales, but also the prices offered for such as are not sold.

WINSLOW'S PATENT COMPOUND RAIL.

THIS RAIL ,which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are,—a saving in the wear and tear of Machinery—it saves to a great extent in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable. Being practically a continuous Rail for the entire length of the Road, without break at the ends of bars the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effect upon cars and machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at HANGING ROCK IRON WORKS, upon the Ohio River, and at MT. SAVAGE IRON WORKS, Maryland. Specimen of the Rail and patterns of same will be gladly shown, as well as all information in relation thereto, given by application to

MUSKINGUM WORKS,
ZANESVILLE, OHIO.

DOUGLASS, SMITH & CO.

WOULD respectfully call the attention of Railroad Companies to their establishment at Zanesville

They are prepared to execute orders, on short notice, for

Passenger Cars of the most superior description,

Second Class Passenger, Mail Express, and Baggage Cars; Freight, Cattle, four or eight wheeled Gravel Cars.

We manufacture a superior

CAR WHEEL,

Over 2500 of which are now running on the Central Ohio Railroad, and many of these have been in use on the road over two years, having in that time only three to crack, and two to be renewed in consequence of the wearing of the Chill. We have also commenced the manufacture of the celebrated

WASHBURN WHEEL,

And are prepared to furnish this wheel, with or without axles. Also, castings for Cars fitted to order at the shortest notice.

BOLLMAN'S PATENT IRON & WOOD BRIDGE.

We are also agents and builders of the above celebrated Bridge. Are now placing upon the piers an iron bridge on this plan over the Muskingum river at Zanesville. We are ready to contract with companies for the construction of this Bridge. All orders addressed

DOUGLASS, SMITH & CO.,
au4tf. Muskingum Works, Zanesville, O.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Resevoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

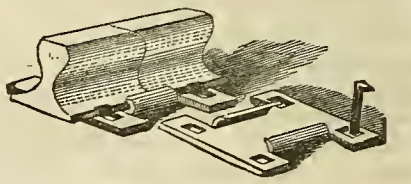
Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,
PRINCIPAL AGENT,
May 18.6* Office, No. 167 Broadway, New York.

Covington and Lexington Railroad Open to Falmouth.

ON and after Monday, the 7th of Nov., and until further notice, Cars will leave Covington daily (except Sundays) at 7 o'clock. A. M., for Falmouth,—stopping at DeCoursey, Culbertson, Grant's Beud, New Philadelphia, Canton Benton, Morning Side, Demossville, Butler and Irving.

Returning, will leave Falmouth at 1 P. M., stopping at all of the above stations.



☞ For freight and passage apply to C. CARPENTER, Freight Ageut, Covington Depot.

R. M. SHOEMAKER Superintendent.

Cincinnati, Wilmington and Zanesville Railroad.

OPEN TO CIRCLEVILLE.—Two daily Trains, (Sundays excepted) between Washington and Cincinnati, and one daily train between Circleville and Cincinnati. On and after Tuesday, March 14th, 1854, until further notice, trains will run as follows:

Upward train for Circleville, leaves Cincinnati 7:45 A. M., and arrives at Circleville, at 2:40 P. M.

Upward train for Washington, leaves Cincinnati at 3:10 P. M., and arrives at Washington at 8:05 P. M.

Downward train leaves Circleville at 12:15 P. M., and arrives at Cincinnati at 7:45 P. M.

Downward train from Washington, leaves at 6:30 A. M., and arrives at Cincinnati at 11:25 A. M.

Trains will stop for passengers as follows: At Williamsport, Four Corners, New Holland, Washington, Rattlesnake, Sahina, Cross Roads, Wilmington, Sligo, Clarksville and Morrow; and on the Little Miami Road at Deerfield, Butterworth's Water Station, Loveland, Miamiville, Milford and Plainville, and on proper signal by flag, or to the Conductor, at Branch Hill and Linwood, at Turnpike.

The downward Trains connect at Morrow with the Trains on the Little Miami Road for Columbus.

Lines of Omnibusses will run between Circleville, Chillicothe and Lancaster, connecting with the morning train from and evening train to Cincinnati.

Fare from Cincinnati to Washington.....$2 25
" " " " Circleville..... 3 00

For other information and Tickets, apply at Ticket office, corner of Broadway and Front sts, and at the Little Miami Depot, or to the Station Agents on the line.

E. W. WOODWARD,
Engineer and Superintendent.

☞ The Omnibus Line will call for and deliver passengers to and from the trains to any part of the City.

J. HOWELL, Conductor.

☞ The Company will not be responsible for baggage exceeding $50 in value, unless the same be returned to the Conductor or Agent, and freight paid at the rate of a passage for every $500 in value above that amount.

COLUMBUS PIQUA, AND INDIANA RAILROAD.

New route from Columbus, West and from Urbana, East.

On and after Monday September 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between COLUMBUS and URBANA. Will leave Columbus at 4.50 a.m., and 3.30 p.m.—arriving at Urbana at 8.12 a.m., and 6.14 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with the night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morning Cleveland and Znnesville trains can have a few hours at Columbus and leave by the 3.30 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton and Cincinnati.

The 9.15 a.m. train from Urbana connects with the morning train from Cincinnati and Dayton that arrives at Urbana 8.40 a.m.—arriving at Columbus at 12.05 p.m in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Sandusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibuses will connect with the trains at Urbana for the conveyence of passengers to and from Piqua and Greenville over a good Macadamized road.

FAIRBANKS' SCALES.

Railroad Track Scale---50 Tons.

DEPOT SCALES 12,000 LBS.

FAIRBANKS & CO'S

PLATFORM SCALES,

Long known—Severely tested—Always right—
The acknowledged standard—Adapted to
every required operation of weighing, as

Railroad Track and Depot Scales,

In use on nearly all the principal Railroads in the United States and Great Britain.

WAREHOUSE SCALES,
Dormant and Portable.

HEAVY PORTABLE SCALES,
On Wheels,
For Foundries, Rolling Mills, Iron Houses, &c.,

STORE SCALES,
Various Modifications.

COUNTER SCALES, &c.,

HAY & COAL DEALERS' SCALES,
Made entirely of Iron and Steel.

GENERAL AGENTS:

FAIRBANKS & CO., 89 Wator Street, Now York.

MANUFACTURERS

E & T. FAIRBANKS & CO.,

ST JOHNSBURY, VT.

TESTIMONIALS:

OFFICE OF THE G. & C. U. RAILROAD CO.,
CHICAGO, FEB. 20TH, 1854.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—All of the principal station buildings on this road are furnished with your Depot and Platform Scales, with the exceptions of two scales. Your Scales were adopted after trial with those of other makers, and I take pleasure in now saying, that after more than four years trial, they have given entire satisfaction to us, and the public doing business with the Company.

I am not aware of a dollar's expense being incurred from wear or defect of materials in any part of the scales. The Track Scale, with suspended platform, which you have recently put into our principal depot at this place, judging from present appearance and the use to which it has been put, will, I doubt not, answer the purpose desired, and be equally satisfactory.

JOHN B. TURNER,
Pres't and Sup't.

CENTRAL RAILROAD CO.,
SAVANNAH, JAN. 6TH, 1853.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.

DEAR SIRS:—Your Scales, which we have used for many years, gave so much satisfaction, that we ordered from your House, all the Scales necessary for our large new Warehouse. Your agent has just finished putting up twenty-two of your No. 1 and No. 2 Depot Scales and a large Road Scale, and I am pleased with the manner in which the job has been done. I trust and believe that this work will do credit to your establishment.

Respectfully, your obedient servant,
R. R. CUYLER, Pres't.

PORT RICHMOND, PA. MARCH 2D, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.,

GENTLEMEN:—There are now in the Richmond Wharves at the terminus of the Reading Railroad, Twenty-six of your ten ton Track Scales, which have been in constant use for more than six years. The least quantity of Coal weighed annually upon any one wharf has been 400,000 tons. The aggregate quantity weighed upon the twenty-six scales, has been more than one million two hundred thousand tons per annum.

During the time since they have been in use, they have always retained their adjustment without any expense for repairs. They have been tested every year by the Sealer of Weights for the county of Philadelphia, and always found correct, and at the present time their operation is apparently as perfect and as sensitive as when first built.

JOHN E. ROBERT,
Superintendent of Wharves.

STATE OF NEW YORK,
CANAL COMMISSIONERS OFFICE,
ALBANY, JUNE 21, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—Your favor of the 10th, asking my views of the Weigh Lock Scales, manufactured by you, and introduced upon the Erie Canal, is received.

I have no hesitation in saying, that they have fully answered your recommendation in every particular. Their capacity for strength is fully equal to sustain the required burthen. They are not liable to get out of adjustment or repair. The arrangement of the Weighing Beam is admirably adapted to obtain rapid results. I know of no Scale superior to them, in this or any other country.

In great haste, Yours truly,
JOHN C. MATHER,
Canal Commissioner.

PORTABLE SCALES.

The following Railroads have been furnished exclusively, or nearly so, with FAIRBANKS' SCALES:

Alahama & Tennessee.	Huron & Oxford.
Allegheny Valley.	Illinois Central.

RAILWAY FROM CINCINNATI TO LOUISVILLE, THROUGH INDIANA.

This week, at any rate the next, will inaugurate the first railway communication between Cincinnati and Louisville. We confess to some curiosity as to the results. Substantially, the railway communication between Cincinnati, St. Louis and Louisville, is parallel with that between New York, Philadelphia and Baltimore. We trust it will be much better managed than the Eastern lines are, and we have no doubt it will be more profitable.

It is true, the railway between Cincinnati and Louisville is not on a straight line, nor made expressly for that connection, but it will be as useful and nearly as expeditious as if it were. The connection between Cincinnati and Louisville will be formed thus:

Ohio and Mississippi Railroad	87 miles.
Jeffersonville Railroad	52 do
Total,	139 do

This will probably be run at first in *six* hours, but *may* be run in four. The rapidity and certainty with which the journey will be accomplished, by men of business will cause large numbers to take this route. Travelers coming up the Ohio will be glad also to be relieved from the tedium of the river, on arriving at Louisville. By starting early from Cincinnati or Louisville, one may arrive in either city in time for business, which cannot be accomplished in the boats.

There is another view of this topic, which is interesting, socially and financially. We had, heretofore, nothing like the intercommunication with the people south of us, which ought to have existed. There was no communication at all tolerable, except that of the river, and that is slow and tedious. Now, however, as railways begin to connect us with the southern interior, a great change will take place. Ten-fold the number of persons will cross the borders, and railways will not only facilitate, but *center* business in that direction, beyond the most extravagant anticipations. Aside from this, the places themselves have now taken their place in the first class of American cities. Looking to the last census and the known increase since, and including the suburbs and adjacent towns, we estimate their population as follows:

Cincinnati, including Fulton, Spencer, Storrs, Newport and Covington	200,000
Louisville, Portland, Jeffersonville and New Albany	80,000
Aggregate	280,000

This immense civic population, engaged in a vast commercial business, must have a continual traffic and intercourse with each other. The habits of the Western people also make them locomotive in an eminent degree. The movement between Cincinnati and Louisville will soon be much greater, than that between Philadelphia and Baltimore. Indeed, it is so now. Six splendid steamers run daily between these places, besides the great number of boats plying between Cincinnati and New Orleans, and way boats to every point of the Ohio and Mississippi. From 600 to 800 passengers daily now move between Cincinnati and Louisville. The number is constantly increasing, and the Louisville Packets never run so full as in this season.

The fare by railroad will be something higher than by steamboat, and of course this will influence the poorer class of persons.—But the speed, by which half a day is saved, will induce the great body of business men to go by rail.

The completion of the Ohio and Mississippi Railway to the Jeffersonville Railroad, is an era of great importance to the former company. It will test speedily the correctness of the views and estimates made of its anticipated profits, and furnish an indication of its final result. At present, there is a prospect, that the great work which is to connect the metropolis of Ohio, with that of Missouri, will fulfill in its results, all that its friends anticipated. When it shall be completed to St. Louis, the three great cities of Cincinnati, Louisville and St. Louis, will all be united by one magnificent chain, which, though iron in its fabric, will be golden in its fruits.

Distance, in the West, is fast disappearing, and the very confines of states, which in former times would have been great Empires, are reached in a single day, and states, people and distances seem all blending and centering together into one vast homogeneous whole.

PROGRESS OF OHIO RAILWAYS.

The Dayton *Journal* complains that we did not notice in our article of the above title, the Xenia and Belpre. True, and we did not name half a dozen others in progress. At that time no part of it was finished, and we were not posted as to the progress of the part under contract. We have since, however, in our last number, (June 8th,) noticed the completion of the road between Dayton and Xenia, as well as that of other roads to the amount of 229 miles this spring. Our friends must not be disturbed if we are not very prompt to notice their progress, when they are not very prompt to give us information.

Since the publication of our table of Ohio completed Railroads, we find that there were some omissions, and some parts of roads finished since the article was written. We complete the table, therefore, with the following corrections:

	Miles.
Complete Ohio Railways, (per former table)	1,707½
Cincinnati and Marietta	22
Dayton and Belpre	16
Cleveland, Zanesville and Cincinnati	54
Ohio and Indiana	20
Aggregate	1,819½

The Dayton *Journal* states that 44 miles of the Dayton and Belpre Railroad are under contract and progressing. It also states that the "Broad Gauge Railway," from Dayton to the Pennsylvania Line, is all under contract, and a full force employed upon it. We are glad to hear it, though we are not informed *where* they are at work, or *what* are the prospects of the road. We claim to see a reasonable distance through a mill-stone, but not entirely through without some light. The railways in progress would do themselves no injury by posting us up, as to their condition and progress.

Railroads.

PITTSBURGH, MAYSVILLE & CINCINNATI RAILROAD.

A large and enthusiastic meeting of the citizens of Morgan county, favorable to an early extension of operations upon the line of the Pittsburgh, Maysville and Cincinnati Railroad west of the Muskingum river, convened at "Peugh's Hall" in the town of Malta, May 31, 1854, pursuant to public notice.

T. W. Peacock, Esq., the President of the company, being called upon made an interesting statement of the past operations of the company, and gave a flattering account of its present and future prospects. He informed the meeting that the original local subscription east of the Muskingum, had been increased from six thousand to ten thousand dollars per mile; inereasing the local basis, and materially adding to the eredit and ability of the company to carry on their work to completion.—At the same time by cheapening some of the heavy work and the advantage of favorable contracts, the company would secure the running of the cars for a very considerable decrease of the original estimates. The cash outlay of the company being over $200,000 less than at first contemplated.

Mr. P. stated that the board of Directors were now ready to undertake the prosecution of the work west of the Muskingum river, as soon as a local subscription of six thousand dollars per mile could be obtained for that purpose, and a favorable line for the road and right of way could be secured. The company intended to apply the means already subscribed to the early opening of the road from Muskingum river to the Central Ohio Railroad, thus opening the line to the Eastern markets. That the company would not be justified in undertaking the work west without first securing the local aid required. The credit and character of the company required such subscription, and without which the company could not undertake the work the present year.

Several other speeches were made when resolutions commendatory of the course pursued by the Board of Directors in the management of the affairs of the company were adopted. A committee of five persons was appointed to eanvass the county on hoth sides of the Muskingum for subscriptions to the stock of the company, to enable the road to be early constructed from McConnelsville to the Hocking River.

The meeting then adjourned.

PENNSLYVANIA CENTRAL RAILROAD.

An adjourned meeting of the stockholders of the Pennsylvania Railroad Company was held on the 5th inst., at Sansom Street Hall, Philadelphia, for the purpose of receiving the report of the committee relative to the purchase of the main line of the State Works.

The report was as follows:

That they have considered the subject committed to them as fully as the nature of the question involved, and their limited time have permitted. Under a strong impression of its importance they carried discussions covering the whole ground of their inquiry through several meetings; they also delegated to a subcommittee the duty of seeking additional information; which committee, after several sessions reported in some detail.

Having regard to the rivalry encountered by the main lines of transportation from Philadelphia westward, in other states north and south of Pennsylvania, the committee were very desirous of finding grounds upon which they could safely recommend the contemplated purchase, Their investigation has, however, forced upon them the unanimous conclusion not to advise the purchase upon the terms fixed in the recent act of the Legislature authorizing the sale.

Important as it undoubtedly is to the interests of the state and this city, that these parallel and proximate lines of transportation should be consolidated and made as efficient as judicious joint management, and watchful though favoring legislation can make them, the committee regard the conditions and restrictions imposed by the act of the Legislatnre, to be such as the Pennsylvania Railroad Company ought not to accept.

The committee do not hesitate to express their regret that this long delayed offer to sell has been encumbered with such terms as effectually preclude the Pennsylvania Railroad Company from being a competitor at the sale; and in view of the importance of the subject, respectfully submit to the stockholders the propriety of appointing a committee of their number who, in conjunction with the President and Directors, shall determine on such future action as shall be deemed best.

After much animated debate as to the expedieucy of purchasing the Columbia Railroad at the price put upon it by the Legislature, or of building a new road entire, at a cost of $4,000,000, the committee were discharged without any definite aetion upon the report.

CLEVELAND & PITTSBURGH RAILROAD.

It was expected by those familiar with the growing business of the Cleveland and Pittsburgh Railroad,that the receipts for May,1854, would show something of an increase over those of May 1853, but we presume none save the actual managers of this admirably conducted road, expected the increase to be as great as the figures demonstrate. The following is official:

The Earnings of the C. & P. RR. for May, 1854, were	$51,283 10
May, 1853	35,364 44
Increase	$15,918 66

We have been permitted to make further examination, by which a most gratifying result is shown, inasmuch as the greatest increase, by far, is in the item of freight, as will be seen by the figures below, which we get from the books:

Earnings for May, 1854, for passengers	$22,127 98
Do do 1853, do	18,731 82
Increase on passengers	$3,396 16
Earnings for May, 1854, for freight, etc.	$29,155 12
Do do 1853, do do	16,632 62
Increase on freight	$12,522 50

These figures show that the increase of earnings for May of this year, over May of last year, is a fraction above 45 per cent. It will be remembered too, that during May of '53, the Cincinnati and Pittsburgh passengers passed through Cleveland, but since that time the opening of the Pennsylvania and Ohio road to Crestline has diverted that travel.—Notwithstanding all this, the business of the road has increased in every department. It is well known that passenger business is fickle, easily diverted, and constantly changing.—Freight, however, when it finds its current, runs steadily, and its increasing flow demonstrates unmistakably the growing resources of the country through which the road runs.

In the case of the Cleveland and Pittsburgh road, under the unrivalled management of its judicious and active superintendent, Mr. Durand, and with new fields of wealth opening along the line of the main track, and the continuation of the C. Z. & C. road into the Muskingum valley, an increase of business heretofore unknown, can be confidently relied upon. What this road gains is merely by the growth of the country, and its future local trade cannot be estimated.—*Cleveland Herald*.

ROUTE TO CHICAGO & ST. LOUIS.—There is now an immense amount of traffic between this city and St. Louis, via Indianapolis, Lafayette, Michigan City and Chicago. Time, about 35 hours; fare $17 00

Between this city and Indianapolis there are three lines, candidates for public favor, viz: 1st, via Hamilton, Richmond and the Central Indiana road; 2d, via the Ohio and Mississippi road to Lawrenceburg, thence via the Indianapolis and Cincinnati road, and 3d, via the river to Madison, and thence via the Madison and Indianapolis road. From Indianapolis to Chicago all of these three lines take the same route. The amount of travel over these roads is immense and is daily increasing.

JEFFERSONVILLE RAILROAD.—John Zulauff, Esq., has been elected President of this company in place of Wm. Armstrong,Esq., resigned.

PROVIDENCE & RIO GRANDE RAILROAD; TEXAS.—*The American Flag* of 2d April, contains the act of incorporation of this company, by which it is empowered to construct a railroad from some suitable point on the Laguna Madre, Brazos Santiago, Brazos or Clark's Island, and thence by such course and to such points on the Rio Grande, and up and down said river, and by the way of Sal del Rey, as the company may determine.

The capital stock consists of 4,000 shares of $100 each.

The Commissioners have met and opened books for subscription to the capital stock, and when a sufficient amount shall have been subscribed, Directors will be chosen and the company fully organized.

The amount of freight between Brownsville and Brazos Santiago during the last year, transported by steam, has been 66,666 lbs.

By waggons, - - - - - -	45,417 "
Total, - - - - - - -	112,083 "
This at 40 c. per 100 lbs. is	$44,833 29
$2,000,000 in specie at 1 50 per thousand, - - - - - - -	3,000 00
Hides, wool and stock, - -	2,500 00
Passengers, - - - - - - -	5,000 00
	$55,333 29

Quite a business for a portion of the country but recently settled.

The road will undoubtedly be built, having *State aid* in the way of Government lands, to the amount of 16 sections to the mile, making 256,600 acres.

NEW THROUGH ROUTE TO NEW YORK.—By an advertisement in our columns it will be seen that passengers are carried through from Cincinnati to New York, over the Cincinnati, Hamilton & Dayton and Mad River roads to Forrest City, thence to Crestline, thence to Pittsburgh, thence to Philadelphia, thence to New York City, with the privilege of lying over at any point on the road, and resuming at pleasure. Fare only $16; time, 34 hours.

This is a pleasant route to travelers under any circumstances, and to business men in particular, inasmuch as it affords them an opportunity of visiting Philadelphia without loss of time or additional expense. The roads over which this route passes are surpassed by none in the way of completeness. The connections are complete twice daily from Cincinnati. Tickets can be had of the General Agent, W. A. Latham, at the Spencer House, or the Ticket Agent, Jno. W. Shipley, No. 169 Walnut street, next to the Gibson House.

By the way, the establishment of this Central Office for the sale of tickets is a great accommodation to the public.

NEW ORLEANS & OHIO RAILROAD.—At a recent election for directors of this company the former board were unanimously re-elected, as was also L. S. Trimble, Esq., the President.

ILLINOIS BANKS.—The Alton Courier has received from Thos. H. Campbell, Esq., Auditor, a full statement of the condition of the banks of the state of Illinois, on Monday, April 3d, 1854. The following are the aggregates of resources and liabilities—

RESOURCES:

Public Stocks at the rate at which they were received by the Auditor	$2,475,741 62
Amount paid for stocks over the value at which they were received by the Auditor	196,162 13
Real Estate	31,158 22
Notes of other banks on hand	385,339 45
Amount of debts owing to the association, other than loans and discounts	1,368,203 68
Suspended debt	
Specie on hand	563,152 04
Loans and discounts	316 874 76
Deposited with other banks	878,612 58
Expense account	24,874 97
Checks, drafts and other cash items	63,692 41
Total resources	$6,305,978 86

LIABILITIES:

Capital stock paid in and invested according to law	$2,513,790 17
Amount of debts owing by the association, other than for deposits	294,034 50
Amount due to depositors	1,286,102 25
Notes or bills in circulation	2,283,526 00
Profit and loss account	71,787 00
Total liabilities	$6,449,239 92

FORT WAYNE & CHICAGO RAILROAD.—We understand that the directors of this road have thought it prudent under existing circumstances, to change the plan of operations, and instead of working as heretofore along its whole length, with a view to a simultaneous opening, to concentrate the forces mainly on the eastern portion reaching to Columbia, Whitley county, in order that the road may be completed in divisions connecting with the finished roads from the East. At an early date in September next it is designed to commence track laying from the Summit City to the West, and to open twenty miles by November to run in connection with the Ohio & Indiana.

In the mean time the heaviest sections on the Western Division, requiring the longest time, will continue to progress.

The iron for the whole road to Chicago has been purchased, and its delivery is soon to be commenced.

A large portion of the cross ties has already been delivered for the western as well as the eastern division, and a fair portion of the grading done.—*Fort Wayne Times.*

IOWA CATTLE IN NEW YORK CITY.—Since the opening of the Chicago and Rock Island Road the drovers are bringing cattle to the New York market by rail from the state of Iowa. A single drover delivered 600 at the Bull's Head market a few days ago in nine days from the western bank of the Mississippi. in Iowa, by means of the Rock Island, Michigan Central, and New York Central roads, and the Lake Erie and Hudson River boats, and received therefor an average of $85 each. A friend who communicates this fact, says in a note, that it forcibly illustrates the changes brought about by the wonderful working agency of railroads, and it certainly does.—*New York Times.*

At the present reported price of beef in the New York and Philadelphia markets, 20 and 25 cents per pound for steaks, it would pay well to carry cattle there from almost any point of the compass.

PASS MANCHAC BRIDGE, ON THE GREAT NORTHERN RAILROAD, LOUISIANA.

The Pass—leading from Lake Maurepas to Pontchartrain—is a deep, narrow stream, surrounded by low marshes heavily wooded with cypress, at the point where the bridge of the Great Northern Railroad Company spans it, about eigh ten miles from Lake Pontchartrain.

The soft, yie ding character of the swamp, which for many miles, envelops this Pass and the Lake that disembogues through it, the depth of the water in the Pass, the strength of the current, and other peculiarities, induced even engineers to surround the undertaking of bridging it with many difficulties. The result has dissipated all these apprehensions. The Company have built across the Pass a bridge of over two thousand feet, which is one of the most substantial wooden structures in the United States. The plan of this bridge is no less simple than ingenious. The superstructure, which rises six or eight feet above the water-mark, rests upon six head piles, placed at distances of ten fect apart, and these are further sustained by two bracing timbers on each side, which are not sunk perpendicularly, but aterally, at an angle of thirty degrees, so as to give, not only strength to the structure, but to prevent its being shaken by the current, or other causes. The average depth of the Pass is nineteen fect, and the trusses or posts are driven eleven feet into the bottom, which is composed of hard blue clay. It is impossible to conceive of anything which can be erected of timber more substantial or permanent. Its strength has been fully tested by placing upon it an enormous amount of railroad iron, which did not move the structure the hundreth part of an inch. The constructor of this bridge, Mr. Carwin, deserves great credit for the ingenuity and the substantial character of the work.

The Pass Manchac is a navigable stream. Hence the Great Northern Company were under the necessity of constructing a draw bridge through which the vessels might pass. This work was assigned to those enterprising bridge contractors Maxwell, Briggs & Co., and a beautiful structure has been completed. This draw is on the plan of Howe's Patent Truss bridge, and is swung on a central scaffold work, moving circularly on wheels, like those of a railroad car. One man working a crank in the center, can swing around the whole structure, which is 143 feet in length. Thc width of the passage for vessels is sixty feet.—*Daily Delta.*

Batavia, Perintown & Milforn Railroad.—This is a newly proposed route by which our friends of Clermont county purpose reaching this city, via Milford on the Little Miami road. The books for subscription to the capital stock will be opened at several points in the early part of the ensuing month.

Grann Rapids & Indiana Railroad Company.—The following are the officers and directors of this newly organized Company: Joseph Lomax, President; Wm. H. Campbell, Secretary; Sylvester R. Shelton, Treasurer; Josiah D. Cook, Chief Engineer; Geo. Walker, Resident Engineer.

Josiah D. Cook, Joseph Lomax, of Marion, Indiana; Joseph G. Van Horn, of Grant Co.; Ambroze W. Henley, Andrew J Neff, Amos M. Hackney, Lewis Bailey, J. E. B. Rose, Abraham Stahl, N. D. Clouser, George S. Howell, Sylvester R. Shelton, and William Henley, of Hartford City, Directors.

This Company was organized January 18th 1854, with a subscription of 2200 shares at $25 each, We have spoken of it previously under the name of Indiana, Kalamazoo and Grand Rapids Railroad Company. Though the name at the head of this article is the name under which the Company was chartered; the office of the Company is at Hartford City, Blackford county, Indiana.

Correction.—We are indebted by way of an apology to E. W. Serrell, Esq., for some typographical errors which crept into his article upon "Bridges of great spans for Railroads," in our last issue but one, which mar the sense of the article, and make him say what he never intended.

In the fourth paragraph, of the second column, page 211, for "has yet been *contemplated* in any part of the world," read "*constructed.*"

On page 212, second column, fifth paragraph, third line, for "*alterations*" read *alternations.*

We regret sincerely to have such errors occur, but they seem almost unavoidable.

Cincinnati, Lebanon and Xenia Railroad.—We are pleased to learn that after a temporary suspension, consequent upon the inability of the original contractors to comply with the terms of their contracts, the work upon this line has been resumed under the direction of Messrs. Degraff & Co., as contractors, who will put a strong force at work immediately, and should the Company's finances warrant it, will complete the road from Sha.on to Xenia by January 1856.

☞ The New York Central Railroad Company, on the 1st inst, established a new and important regulation—the recording of every check given for baggage, the destination, number, etc.

Peoria & Oquawka Railroad.—The western division of this road is progressing rapidly; seven miles of the Mississippi Bottom division are completed; Knoxville will be reached in the course of this or next month; rails have been contracted for sufficient to reach Monmouth.

Passage of the Railroad Consolidation Ordinance.—The First Branch of the City Council yesterday afternoon passed the ordinance to aid in the consolidation and completion of a continuous line of railroad from Sunbury, Pennsylvania, to tide water at Baltimore. The ordinance provides for the conveyance in perpetuity to the consolidated Northern Central Railway company, of all the interest now held by the city in the Baltimore and Susquehanna Railroad; the transfer not to be made until the consolidated railroad shall be completed and opened for the transportation of passengers and merchandise from Sunbury in Pennsylvania, to tide water in the city of Baltimore, by the route designated in the ordinance authorizing the Baltimore and Susquehanna Railroad company to extend their road to tide water. The ordinance passed the Branch by a vote of fifteen to five, and had previously passed the Second Branch by a vote of eight to two; a three-fourths vote in both in both cases. This result places the important benefits which our city will reap from the consolidatien and completion of this line of railroad beyond almost the possibility of further postponement.—*Balt. Amer.*

Richmond, Fredericksburg & Potomac Railroad.—From the report for the year ending 31st March last, it appears the revenue of the road during the past year, reached the sum of $263,447 89; and the expenses for the same period amounted to $133,-921 01—leaving a balance applicable to the payment of the regular dividend and interest, of $129,526 88. With the deduction of these two items, which for the past year amounted to $90,715 96, a surplus of net increase appears of $38,800 92, which is the excess of the contingent fund of the company, over the amount stated in the last annual report, less the sum of $7,087 08 allowed the Washington and Fredericksburg Steamboat company, at the last annual meeting of stockholders.

Aurora Extension Railroad, Ills.—We learn that the old strap rail of this road has been nearly all removed between the Junction and Aurora, and replaced by the "Compound" or "Continuous" rail. The difference in time made, and the comfort of the passengers must be great.

This same company have completed 25 miles of fencing along the line of the road, and the remaining 65 miles will be shortly finished, the lumber being all on hands for the purpose.

This is a praiseworthy undertaking, adding much to the safety of the road. Every railroad in the country should be compelled to fence and otherwise protect the line of their roads.

Ohio & Mississippi Railroad.—The following officers were elected on Tuesday, 6th inst.: President. James C. Hall; Vice President, Charles D. Coffin; Secretary, H. H. Goodman; Treasurer, Ohio Life and Trust Company; Solicitor, Thomas G. Whitehall.

BANK CAPITAL OF CITIES.

List of Cities where there are $1,000,000 of Banking Capital employed, with the number of Banks in each.

CITIES.	No. of Banks.	Capital.
New York	57	47,454,400
Boston	37	30,160,000
New Orleans	8	12,267,120
Providence*	31	11,923,300
Philadelphia	15	10,618,000
Charleston	8	10,256,735

Bangor	11	1,100,000
Wilmington, N. C	3	1,050,000
Bridgeport, Ct.*	5	1,049,500

*Manufacturing Towns.

The cities that are remarkably deficient in Bank Capital, when their large business is considered, are St. Louis and Cincinnati. In both cases this want is remedied by the large capital employed by private banking houses. Philadelphia, Cincinnati, Baltimore, Buffalo, and Pittsburgh have less bank capital now, than they had fifteen or twenty years ago, while Providence, Hartford, Brooklyn, N. Y., Syracuse, and a few others have been rapidly increasing.

In addition to the banks above enumerated, there are in process of organization, three new banks in Providence, one in Syracuse, one in Buffalo, one in Lowell, ono in Worcester, one in Augusta, Ga.

In various cities the bank capital is nearly one million of dollars, viz: Norfolk, Va., $291,000; Fall River, $950,000; Detroit, $812,000; Lancaster, Pa., $982,000; Wilmington, Del., $848,000; Maysville, Ky., $850,000.

In Maine, no Bank has a larger capital than $500,000; New Hampshire, $200,000; Vermont, $150,000. The largest capital employed by any one bank, is that of the Bank of Commerce, New York, $5,000,000; the next, the Merchants' Bank, Boston, $4,000,000; Bank of Charleston, $3,160,000; Bank of Louisiana, N. O., $3,933,000; New Orleans Canal and Banking Company, $3,164,000.—With these exceptions, there are none beyond $2,100,000.—*Merchants' and Bankers' Almanac.*

Dayton & Western Railroad.—At a meeting of the Board, held on Monday, 5th inst., the Dayton Journal says, Simon Gebhart and W. DeGraff, presented their resignation as Directors, and E. F. Drake resigned the office of President of this company,—Messrs. John H. Achey and Joseph Clegg were elected Directors to fill the vacancies in the Board, and Joseph Clegg was elected President of the Board. Mr. Clegg is an efficient, industrious and capable business man, and we think, will render the company real service, in the position in which he has been placed.

Buffalo & Brantford Railroad.—Hon. James Wadsworth, President of the Buffalo and Brantford Railroad, returned from England in the *Asia*, where he has been on business connected with the road. We understand he was eminently successful in the objects of his voyage—the negotiation of the bonds of the company and the purchase of iron for the balance of the road—and that its completion to Goderich will be prosecuted with all practicable despatch.—*Buff. Com.*

Columbia & Hamburg Railroad.—We learn that Mr. J. G. Gibbes, the Engineer in charge, has reached Hamburg by the lower route, and finds it quite practicable and a good line. The country it passes through beyond General Quattlebaum's is a rich one and thickly settled. Much anxiety prevails on the route for the road, and we have no doubt a good subscription will be taken up. The corps has commenced the survey from Hamburg by what is called the ridge route, and it is expected they will get back to Columbia by the 20th of June, when the comparative merit of each will be known. There is some difficulty in getting from Hamburg to the ridge, and the first ten miles will probably occupy a week; the rest of the line will be easily run.

As at present advised, the two routes will differ only about five miles, and the cost of the lower route which is the shorter, will be the greater per mile, while the difference in the distance of the ridge line will about equal the expenditure required for the road. The competition for the route will be one of interest, and a fair subject for a stir. The road must be built, and we expect our Georgia friends will aid us, as they have a deep interest in it. *South Carolinian.*

New York Central Railroad.—The circular of the directors to the stockholders of the New York Central Railroad presents an elaborate and clear exhibit of the financial condition of the company. It will be seen that the receipts of the year to end in July, are estimated at $5,500,000.

The improvements contemplated and in progress are indispensible to the efficiency of the road. When completed they will render it the most perfect thoroughfare in the world. It is questionable, however, whether, in five years, even a double track, 200 locomotives, 225 passenger and 2,500 freight cars, will be sufficient to meet the demands of the rapidly increasing business.

The management of the road, in its several departments, is in the hands of practical prudent men, whose sagacity in the past affords abundant guarantee of the wisdom of their arrangement for the future.—*Alb. Eve. Jour.*

Ohio & Indiana Railroad.—This road is now completed to Delphos, on the Miami Canal, and daily trains are in operation over it, in connection with the Ohio and Pennsylvania Road at Crestline.

Erie once more.—The besotted inhabitants of this place are once more plotting mischief; not content with going unscathed in the matter of damages, for their lawless conduct heretofore, they are only emboldened thereby to re-commence the riotous scenes enacted there last winter. An order has passed the town council to tear up the track and burn the bridges. A freak of gauge and peanut tribute they swear they shall have. The Mayor has not yet signed the declaration of war, but has the matter under advisement.

Had justice been meted out to them, or had Government authorities been as prompt to support the U. S. Marshall in the discharge of his duties last wintsr in this town, as they have been on a recent occasion elsewhere, no threatenings and mutterings of discontent would have been heard. There is but one course remaining to put an end to this disgraceful conduct, and that is to compel the town of Erie to pay for damages already perpetrated. They will find this fool's play rather expensive then, and would feel very little inclination to renew it at the same cost.

Cincinnati, Wilmington & Zanesville Railroad.—We take the following items of this road from the Cincinnati Commercial of the 8th inst.:

Its entire length from Morrow to Zanesville is 113½ miles; to the city of Cincinnati, 167 miles.

There are but four curves with a less radius than 1910 feet—eighty-eight per cent. of the road is straight, and seventy-seven per cent of the grades are less than thirty feet to the mile. Eastward from Wilmington the line is a direct tangent for twenty-one miles. The section between Lancaster and Zanesville is now in course of construction, work having been done thereon to the amount of $400,000, and will be completed to the west bank of Muskingum at Zanesville, in December of this year. The largest pieces of masonry, and the tunnel, are already completed. The receipts of the company to May 1st, were $2,335,674. Expenditures, $2,326,460.

The Lexington & Frankfort Railroad Company have succeeded in negotiating the entire loan recently advertised by them.—The amount of bonds sold was $130,000, at prices averaging about 87 per cent. for the whole issue—the bonds having 15 years to run.

This will be good news to the stockholders, as the entire debt is now funded and the company in a position to commence the declaration of cash dividends.

☞ We would call the attention of our readers having business at Buffalo, to the card of Mr. James W. Hooker, late of Lafayette, Indiana. Mr. H. has established himself at Buffalo as a Commission Merchant, and dealer in Machinery, Agricultural Implements, etc. He will pay prompt attention to all orders entrusted to him, and doubtless give general satisfaction.

Report of the Railroad Commissioners of the State of Connecticut.

We take the following *resume* from the Hartford *Courant*:

The General Railroad Commissioners for the state have made their annual report to the Legislature. They represent our roads as being generally in a good condition. They specify, however, several particulars in some roads that may lead to danger. Some of the railways of the state have been damaged by the extraordinary freshets of the past year, but all have been promptly repaired and are now in good running order. The law with regard to stoppage in crossing bridges and other railways, has been observed, except where the Commissioners have given liberty to do otherwise.

The Commissioners give a list of twenty accidents which have been reported to them since the rising of the last General Assembly; fifteen of these accidents were occasioned by want of ordinary care upon the part of the sufferers; five were produced by causes beyond the control of the sufferers. Twenty-one persons were killed by these accidents and fifteen seriously injured. Sixteen were killed by passenger trains, generally running at high rates of speed; three were killed by gravel trains. Thirteen were killed by their own want of prudence; twelve of whom were walking or standing upon the track. The other seven were railroad operatives, engaged in the discharge of their duties. Only one of the number killed was a passenger. No persons were killed or injured on the Danbury and Norwalk or Hartford, Providence and Fishkill Roads, the past year. There were about ninety deaths occasioned by railroads the year before.

The total number of miles of railroad in operation in the state is 553; in process of construction, 136. The whole capital stock is $25,605,000, of which $16,902,897 have been paid in. The cost of roads has been $25,441,733; gross earnings, $3,283,354; expenditures for working, $1,723,867; net earnings, $1,106,052; dividends, $653,111; debt, $8,037,823; number of miles run by all the trains, 2,092,045; number of passengers 3,202,090; tons of merchandize transported, 670,741; average whole cost of operating the roads for each mile, 82 cents; average earnings per mile for each mile run, $1,57.

One person has been killed for every 104,602 miles run by trains; one person for every 67,132 miles run by passenger trains; one for every 160,124 passengers carried in the cars; one person for every 4,732,000, passengers carried one mile; one passenger only has been killed out of 94,640,000 passengers carried one mile.

The Commissioners recommend a law, requiring a lantern, furnished with a reflector of not less than ten inches in diameter, to be placed in front of all night trains. Likewise, that conductors, baggage-men and brakemen should wear some badge by which they can be distinguished. Likewise, some law enforcing the fencing of railways. Some laws are needed, the Commissioners think, to regulate the exchange of freight from one road to another; and to enable companies to purchase at a proper rate, such buildings or trees as prevent the road from being seen near curves.

They recommend to the roads, to send hand cars over every road before business commences in the morning; that the Company supply the conductors with watches; that new running gear for all pasaenger trains should be supplied, every year; that uniformity in the color of signals should be observed throughout the state; and that the use of strong drink should be prohibited to all the operatives on every road, as is now only done on the New Haven and New London road.

The Commissioners think, that the act passed in 1853 for the better regulation of railways has been very useful.

The N. H., Hartford and Springfield and the N. H. and N. Y. roads, are the only roads that have built double tracks. The former has 55 out of 62 miles; the latter, 56 out of 61½. The most expensive road is New Haven and New York, which cost $83,445 per mile. Of the dividends paid, the N. H., Hartford and Springfield have given $352,500, much more than half of all paid in the state.

Blue Ridge Tunnel.—We were, during the past week, favored with a visit from Engineer Johnston, of the Blue Ridge Road, whose section embraces the Tunnel. Among other items of interest, he informed us that specimens of Gold had been taken from one of the shafts of the Tunnel, at the depth of fifty or sixty feet, which were very rich. The mineral is encased in a flinty quartz. Should the operators encounter such strata as this in their progress through the mountain, we are of the opinion there may be contractors procured who will drill the Tunnel for the fun of the thing, not to say anything of the ramifications that may be necessary. Who knows what may turn up in the bowels of the earth?

Mr. Lythgoe is at present in Tennessee, finishing the location of the road. Many of the contractors are progressing rapidly with their work, and by fall will have "made their mark" upon the line.—*Courier*.

The Blue Ridge Tunnel.—The Staunton, Va., *Messenger*, alluding to the progress of the tunnel says: New and unanticipated difficulties have to be encountered at the western side of the Ridge. Great seams through which water, in great showers, descends, have been met with and the rocks though loose, are in large fragments such as need the most costly and heavy timbers, to uphold them, while the earth is being removed from beneath. It is hoped, however, that this new difficulty will not last long, as it is anticipated that they will soon strike the solid rock that forms the comb of the mountain through which they can make greater headway.

Chicago & Rock Island Railroad Celebration.—We find in some of our Chicago exchanges, notices of the party invited to visit the Falls of St. Anthony in commemoration of the opening of this great thoroughfare, by which the Mississippi has been united to the Lakes.

At Rock Island five steamers were in waiting to receive the company, all of which were filled to their utmost. When last heard from the party had reached Galena, where they stopped for a time to visit the lead mines.

This is magnificent as well as costly manner of celebrating this event, and one that will not soon be forgotton by those who participated in it.

Covington & Lexington Railroad Celebration.—On Thursday, the 8th, a very large number of the citizens of Harrison, Bourbon, and adjacent counties of Ky., and numerous citizens of Cincinnati, visited Cynthiana for the purpose of celebrating the completion of the Covington and Lexington road to that place, some 68 miles. The citizens of Harrison county had made ample arrangements in the way of a barbacue and other "fixins" for the occasion. Everything passed off in the happiest manner, without an accident to mar the festivities of the occasion.

Chicago & Milwaukee Railroad.—The work on this road is progressing very rapidly. The first sixteen miles north of Chicago are already graded, and the ties are all on the ground. Ten miles north of Waukegan are also graded, and in Wisconsin it is all in a state of forwardness, and will be completed as fast as the iron and superstructure are ready.

The iron is all purchased and the rolling stock for the entire line is also under contract All the arrangements of the company are made with reference to the completion of the road by close of navigation.

Penosacla & North Alabama Road.—The Montgomery Mail says, "We are informed that an engineer has been sent out by a company of English and Boston capitalists to examine the surveys of the Pensacola Railroad company, and that he is now actively engaged upon the line. It is understood that if this gentleman, after a thorough examination of the route in all its bearings, decides that the proposed line possesses the advantages claimed for it by the corporators, his principals will immediately advance to the company, two millions of dollars for its construction. What other arrangements have been entered into, if any, for pushing the work to rapid completion, we have not learned.

Telegraphs in the U. S.—From the April number of Schaffner's Telegraph Companion, a very useful monthly periodical, published by Pudney & Russel, No. 79 John St., New York, we learn that the length of telegraphs in the United States, at the present time, is 41,392, and that the capital stock of the companies operating them amounts to $6,671,800.

MONETARY.

At the East we have to note a general activity in the Money Market for the past week, with rates tending toward an advance. Money was in demand, though but comparatively small amounts of number one paper were offered.

The general business was dull. Foreign Exchange was fluctuating, though best names ranged at 109½@109¾. The shipment of specie is principally in gold bars; the amount has been heavy.

In the Stock Market there has been but little activity; speculative feeling seems to have been checked, leaving but slight disposition to invest, and then only in paying securities. The sales, as far as reported, are as follows:

By A. H. Nicolay, June 5th—

$6000	Tol. and Cleve. RR. Bonds, 7s, '63		$79 50
250	do do do		79 00
10,000	Gr. West. Ill. RR. Co. 10s. 1868		90 00

8,000	Lyons, Iowa, Cen. B'ds, 1st m. 7s, '73	9 00
10.000	do do do do	12 00

By Simeon Draper, June 9th—

$5,000	Sand. & Mansfield, 7s	$65 00
2,000	Nor. Ind, 7s, mor. on Goshen Branch,	87 00
20	Shares Third Av. RR. Co	55 50

The market has been much excited by the discovery of alleged frauds in the issue of "Parker Vein Coal Stock,"—the charter authorizing the issue of 30,000, while rumor has it that upwards of 40,000 shares have been issued. The company has been enjoined, and its affairs are undergoing a thorough investigation.

At the West, the past week has been one of active demand for money, with an increased stringency, though to no serious extent. "Number one" paper, of which there is little offering, rates at 1@1½ per cent. per month. Railroad securities are difficult of negotiation at 2 per cent per month.

Eastern Exchange has advanced to 1@1¼ per cent. premium.

The Stock Market is quiet, with but few transactions and those only in the best class of stocks.

NEW ALBANY, LOUISVILLE & SANDUSKY JUNCTION RAILROAD.—We learn that this line from New Albany to the Ohio State Line, 105 miles, was put under contract on the 3d inst. to Messrs. C. & J. Howard, embracing the entire completion and equipment of the road. This leaves only some 12 miles, between the Indiana State line and Eaton, uncontracted for; this portion will be let as soon as ready.

SUBSCRIPTION DECLINED.—The Memphis and Tennessee Railroad company decline accepting the subscription of $100,000 voted to them by the city of Memphis on the 25th ult., upon the grounds that the conditions imposed (the removal of their depot site within the limits of the city) cannot be complied with by a due regard of the interests of the stockholders.

Pittsburg, Philadelphia, Baltimore and New York!

FARE REDUCED! New route opened to New York, all the way by Railroad, via Cincinnati, Hamilton and Dayton Railroad!

Dangers and annoyances of the Lake Shore route at Erie and Harbor Creek avoided.

The quickest, cheapest and most pleasant route to Pittsburg, Philadelphia, Baltimore and New York. Depot in the west end of the city.

Only route via Pittsburg and Philadelphia by which through tickets can be obtained from Cincinnati to New York.

One less change of cars than any other route.

Passengers leaving Cincinnati on 6 o'clock Morning Train of Cincinnati, Hamilton and Dayton Railroad, go through to Crestline without change of cars, and after having thirty minutes for dinner, proceed by Ohio and Pennsylvania Railroad, arriving in Pittsburg at 8 o'clock P. M. Leave Pittsburg via Pennsylvania Central Railroad, at 9 o'clock P. M., and arrive in Baltimore and Philadelphia at 12 o'clock and 30 minutes (noon) next day; and from theuce via Kensington and Jersey City, or Camden and Amboy Railroads, arriving in New York at 4 P. M.

Second Train—Leaves Cincinnati, Hamilton and Dayton Railroad at 8 o'clock and 20 minutes every morning; arrives at Crestline at 4.20 P. M., and Pittsburg at 12 o'clock and 30 minutes, midnight; and after a comfortable night's rest, resume by 7 o'clock A. M. Train, arriving in Philadelphia and Baltimore at 12 o'clock and 30 minutes, midnight.

The only offices in Cincinnati at which through tickets can be purchased from Cincinnati to New York via Pittsburg and Philadelphia, are under the Spencer House, and one door below the Gibson House on Walnut street.

FARE.

For through tickets and information, please apply at Cincinnati, Hamilton and Dayton Railroad Office, north west corner of Broadway and Front streets, under the Spencer House, or to J. W. SHIPLEY, at Railroad Office on Walnut street, between Fourth and Fifth streets, one door south of the Gibson House, or at Sixth street Depot.

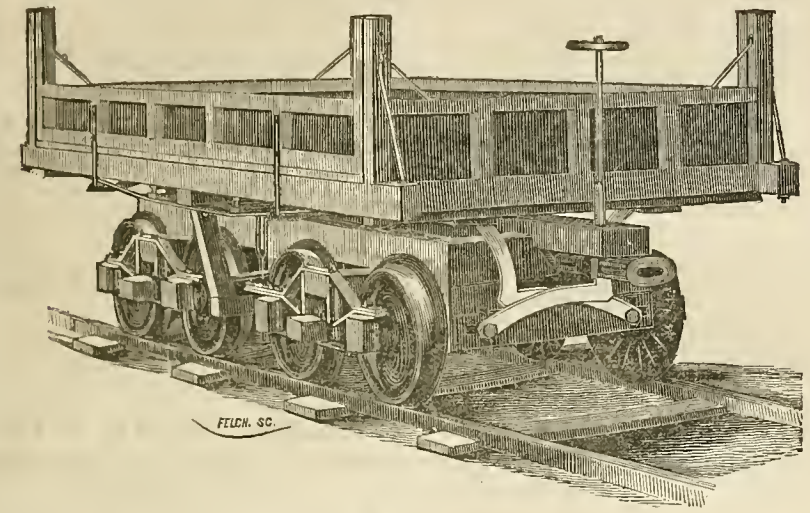
H. O. AMES, Superintendent.
W. A. LATHAM, Agent.

The Omnibus Line will call for passengers by leaving their orders at the offices.

je15-tf WM. H. SMITH, Conductor.

BAILEY'S PATENT DUMPING CAR.

Fig. 1.



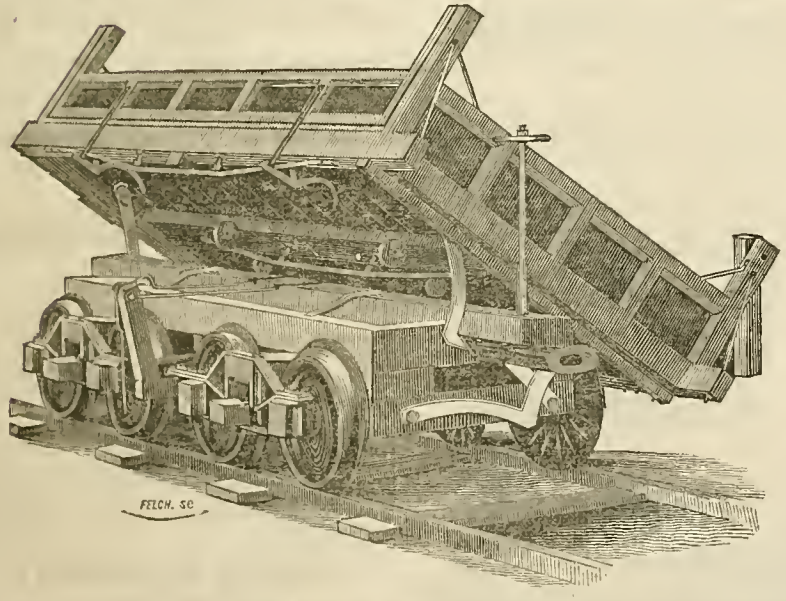


Fig 2.

The above engravings are views of a most important improvement in Railroad Dumping Cars. A patent was granted to C. P. Bailey for the improvement, January 24th, 1851.

Fig. 1 is a view of the car ready to receive the load.

Fig. 2 when dumped, or the load discharged.

This improvement has been in use on the Central Ohio Railroad for several months; also, on the Cincinnati, Hamilton & Dayton; Cleveland, Zanesville & Cincinnati; Cleveland & Columbus; and other Railroads in this state. Also upon the Illinois Central, in Illinois.

The improvement consists mainly, in the adoption of the Wrought Iron Transverse Bars, instead of the Cast Iron Rockers, generally in use. There are, however, other details of importance.

The box or body of the car rests on the ends of the Transverse Bars, whose other and lower ends are attached to the frame of the truck; two of the (wrought iron) bars are used at each end of the cars, to support and operate as guides in dumping the car. This improvement can be applied equally as well to the four-wheeled as to the eight-wheeled car.

One man will dump this car with ease when loaded, in less time than ten men can dump the rocker car, (the long or eight wheeled car is alluded to.) Contractors who have been using it, state that in graveling roads, **it is a saving of two cents per yard,** over the rocker car—that it is a much safer and easier car to manage, preferring it to any other car now in use for similar purposes.

Its liability to get out of repair is not one-tenth that of the Rocker Car. It is also well calculated for carrying and unloading Coal, Lime, Plaster, and all such materials as are carried in Dumping Cars—giving greater inclination in dumping, and discharging the load with greater facility than any other car.

The attention of Railroad Companies wanting Gravel Cars, as well as Coal Cars, is respectfully solicited to this improvement. The cost of this car does not exceed that of the Rocker Car,

To Railroad Companies and Car Builders who wish to purchase Rights, or wish information on the subject, letters addressed to me at Columbus, Ohio, will receive immediate attention.

GEO. L. CHASE.

Columbus, Ohio, June, 1851. Sole Agent for the United States.

TESTIMONIALS.

Engineer's Office, C.O. R. R.
Zanesville, Ohio, Nov. 21st, 1853.

Charles P. Bailey, Esq.,

Dear Sir:—At your request, some two months since, I caused to be placed on this road two of your newly invented Gravel or Dumping Cars. From what I have seen of their work I am clearly of the opinion that they will soon supercede all others of the kind now in use.

We have had the long car filled to its utmost capacity with the various kinds of excavation, and placed it in every position, and one man would dump it with ease in ten seconds, whereas, with the ordinary Rocker Car, it takes ten men one minute to perform the same labor.

The Car is simple in construction—not liable to get out of repair, as there is but little cast-iron about it. It tips to a greater angle than the ordinary car, therefore leaving its load in a better shape. I have no hesitation in saying that when more cars of the kind are wanted on this road they will be built after your model.

Wishing you every success in your undertaking, I remain, with great respect,

Yours, &c.,
GEO. T. CLARKE,
Chief Engineer.

I have purchased for the use of this company, two Gravel Cars, built after the plan of Mr. Bailey, and fully agree in the opinion above expressed.

HENRY O. AMES,
Sup't Cin., Ham. & Dayton Railroad.

I fully agree in the statement made by the gentlemen in this letter, and may also state that they are the best Gravel Cars ever built, in my opinion.

DANIEL McLAREN.
Mast. Machinist Cin., Ham. & Dayton Railroad.

Zanesville, Dec. 21, 1853.

Charles P. Bailey, Esq.,

Dear Sir:—From an experience in using your Improved Dumping Car, we have no hesitation in saying that two cents per yard is saved, (in labor and time) by using your car instead of the present Rocker Car.

That the repairs incidental to your car are not one-tenth of what they are on the Rocker Car.

That it is much the most profitable car for contractors as well as the safest one for laborers to use, being easier to handle.

We consider it superior, in every reapect, to all other cars of the kind now in use.

Yours, truly,
E. NEWCOMB,
C. BARRET.
Cont'rs for grav. East. Div. C. O. Railroad.

I have seen the car above referred to at work upon the Eastern Division Central Ohio Railroad, and fully concur with the opinion of Messrs. Newcomb & Barret

E. B. DUVAL,
Mast. Machinist, Central Ohio Railroad.
Zanesville, December 21, 1853.

Zanesville, Dec. 22, 1853.

Mr. C. P. Bailey,

Dear Sir:—As you desire my opinion of your Improved Dump or Gravel Car, that has been in use for the last three months on the Central Ohio Railroad, I do not hesitate to recommend it as being the best plan for a Gravel or Dump Car I have ever seen. The bills for repairing Dump Cars, such as are now in general use, it is well known, constitute a serious item of expense. On this account alone, your plan deserves a preference over all others, as there is but little liability about your car to any such accidents as are constantly occurring to the others. It dumps to a greater angle, and one or two men can dump it in less time, and with greater ease than the ordinary Rocker is dumped by ten or twelve men.

It will give me pleasure to recommend it as superior to any improvement of the kind in use.

ROBERT MACLEOD.
Chief Engineer, P. M. & C. R. R.

At a meeting of the Ohio Association of Railroad Superintendents, held at Cincinnati, March 8, 1854, the Committee appointed to examine Bailey's Patent Dumping Car,

REPORT,

That they have examined the Car, and consider the improvement a valuable one; and would recommend to any members of the Association who may need Gravel Cars, to examine and test this Car, before purchasing elsewhere.

W. H. CLEMENT,
For the Committee.

Clev Col. & Cin. and Clev. & Erie R. R.
Supt.'s Office, Cleveland, O., Apr. 24, 1854.

Mr. Charles P. Bailey,

Dear Sir:—Two of your Patent Dumping Gravel Cars have been used on the Cleveland, Columbus & Cincinnati Railroad for several weeks, and I am so well satisfied that they are better than any others, that I have just ordered thirty more of the same sort,

Respectfully,
L TILTON,
Sup't

KENTUCKY LOCOMOTIVE WORKS.

CORNER OF KENTUCKY AND TENTH STS.

LOUISVILLE, KY.

THE Proprietors of the Kentucky Locomotive Works would respectfully inform Railroad Companies and the public generally that, having completed their establisbment, they are now prepared to receive and execute orders with fidelity and dispatch.

To Railroad Contractors, Quarry Men, &c.

THE attention of those interested is called to ASH'S IMPROVED HORSE POWER ROCK DRILL, for Railroad Excavation, Stone Quarrying, Well Boring &c.

This Drill is worked by HORSE POWER, requiring but one horse and one man, to keep it constantly at work, with great ease and velocity, performing 60 strokes per minute. It is cheap of construction and repair. The AUGER weights from 300 to 500 pounds, will drill a perpendicular or inclined hole FOUR INCHES IN DIAMETER, at the rate of from 8 to 16 feet per day in ordinary lime stone. It has drilled 2 feet in one hour.

For rights to use for Counties or States, apply to the Patentee. WILLIAM F. ASH,

May 20, 3* Springfield, Ohio.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York,

And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

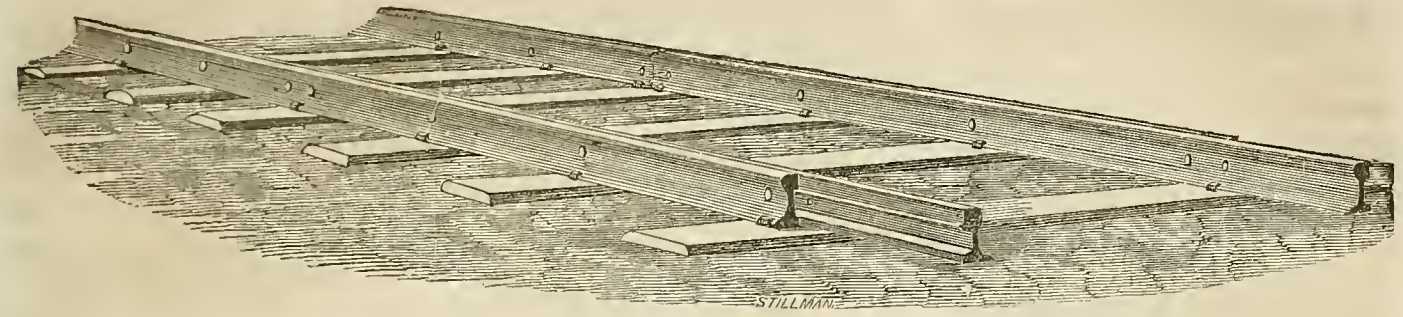
"GARDNER'S ROCK DRILL."



DESIGNED for Mining, Tunneling, Quarry Use, and Rock Excavations of all descriptions, by the use of which a saving of 50 to 75 per cent. is made. This drill can be operated by hand, horse, or steam power. A Machine is now in operation at the Crystal Palace.

Applications for Territorial Rights and Machines must be made to the Patentee.

G. ARTHUR GARDNER,

nov17† Trinity Building, New York

WINSLOW'S PATENT COMPOUND RAIL.

THIS RAIL ,which is represented by tho above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are,—a saving in the wear and tear of Machinery—it saves to a great extent in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable. Being practically a continuous Rail for tho entire length of the Road, without break at the ends of bars the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effect upon cars and machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at HANGING ROCK IRON WORKS, upon the Ohio River, and at MT. SAVAGE IRON WORKS, Maryland. Specimen of the Rail and patterns of same will be gladly shown, as well as all information in relation thereto, given by application to

I AM manufacturing Locomotive Lanterns of the most approved form, with true parabolic Silver-plated reflectors, Copper Cases, and in every way equal to the best manufactured in the country. Orders from Railroad Companies in the West are solicited.

A. S. WINSLOW,
†mr24] 9 and 11 West Second St., Cincinnati

Norris' Locomotive Works,
PHILADELPHIA.

ENGAGED for many years in manufacturing Locomotives, offer to Railroad Companies to construct of any plan or size,

LOCOMOTIVES OF SUPERIOR QUALITY.

Our facilities for doing work have been largely increased this year, and orders can be executed with despatch.

Jy7 RICHARD NORRIS & SON.

ASHCROFT'S METALIC STEAM GAUGE.
(BOURDEN'S PATENT.)

THE subscribers offer for sale this valuable Steam Gauge. It is adapted to Locomotive and other steam boilers, indicating with accuracy the continual variations of steam within the boiler, enabling the engineer to maintain a uniform and safe pressure. Any of the Eastern Railroads may be referred to for proof of its importance and value.

MUSKINGUM WORKS,

ZANESVILLE, OHIO.

DOUGLASS, SMITH & CO.

WOULD respectfully call the attention of Railroad Companies to their establishment at Zanesville

They are prepared to execute orders, on short notice, for

Passenger Cars of the most superior description,

Second Class Passenger, Mail Express, and Baggage Cars; Freight, Cattle, four or eight wheeled Gravel Cars.

We manufacture a superior

CAR WHEEL,

Over 2500 of which are now running on the Central Ohio Railroad, and many of these have been in use on the road over two years, having in that time only three to crack, and two to be renewed in consequence of the wearing of the Chill. We have also commenced the manufacture of the celebrated

WASHBURN WHEEL,

And are prepared to furnish this wheel. with or without axles. Also, castings for Cars fitted to order at the shortest notice.

BOLLMAN'S PATENT IRON & WOOD BRIDGE.

We are also agents and builders of the above celebrated Bridge. Are now placing upon the piers an iron bridge on this plan over the Muskingum river at Zanesville. We are ready to contract with companies for the construction of this Bridge. All orders addressed

DOUGLASS. SMITH & CO.,
au4tf. Muskingum Works, Zanesville, O.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to.this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Reservoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals. while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

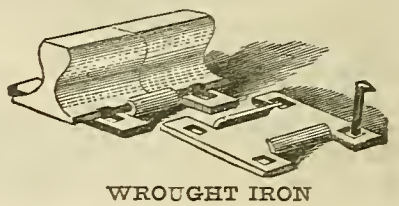
Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,
PRINCIPAL AGENT,
May 18.6* Office, No. 167 Broadway, New York.

Covington and Lexington Railroad Open to Falmouth.

ON and after Monday, the 7th of Nov., and until further notice, Cars will leave Covington daily (except Sundays) at 7 o'clock. A. M., for Falmouth,—stopping at DeCoursey, Culbertson, Grant's Bend, New Philadelphia, Canton Benton, Morning Side, Demossville, Butler and Irving.

Returning, will leave Falmouth at 1 P. M., stopping at all of the above stations.



☞ For freight and passage apply to C. CARPENTER, Freight Agent, Covington Depot.

R. M. SHOEMAKER Superintendent.

Office Cov. and Lex. R. R. Co., Nov. 5th.

TESTIMONIALS:

OFFICE OF THE G. & C. U. RAILROAD CO.,
CHICAGO, FEB. 20TH, 1854.

MESSRS. E. & T. FAIRBANKS & Co.,

GENTLEMEN:—All of the principal station buildings on this road are furnished with your Depot and Platform Scales, with the exceptions of two scales. Your Scales were adopted after trial with those of other makers, and I take pleasure in now saying, that after more than four years trial, they have given entire satisfaction to us, and the public doing business with the Company.

I am not aware of a dollar's expense being incurred from wear or defect of materials in any part of the scales. The Track Scale, with suspended platform, which you have recently put into our principal depot at this place, judging from present appearance and the use to which it has been put, will, I doubt not, answer the purpose desired, and be equally satisfactory.

JOHN B. TURNER,
Pres't and Sup't.

CENTRAL RAILROAD CO.
SAVANNAH, JAN. 6TH, 1853.

MESSRS. E. & T. FAIRBANKS & Co.,
St. Johnsbury, Vt.

DEAR SIRS:—Your Scales, which we have used for many years, gave so much satisfaction, that we ordered from your House, all the Scales necessary for our large new Warehouse. Your agent has just finished putting up twenty-two of your No. 1 and No. 2 Depot Scales and a large Road Scale, and I am pleased with the manner in which the job has been done. I trust and believe that this work will do credit to your establishment.

Respectfully, your obedient servant,
R. R. CUYLER, Pres't.

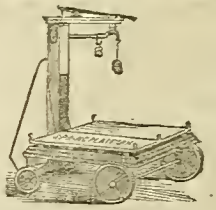
PORT RICHMOND, PA. MARCH 2D, 1852.

MESSRS. E. & T. FAIRBANKS & Co.,
St. Johnsbury, Vt.,

GENTLEMEN:—There are now in the Richmond Wharves at the terminus of the Reading Railroad, Twenty-six of your ten ton Track Scales, which have been in constant use for more than six years. The least quantity of Coal weighed annually upon any one wharf has been 400,000 tons. The aggregate quantity weighed upon the twenty-six scales, has been more than one million two hundred thousand tons per annum.

During the time since they have been in use, they have always retained their adjustment without any expense for repairs. They have been tested every year by the Sealer of Weights for the county of Philadelphia, and always found correct, and at the present time their operation is apparently as perfect and as sensitive as when first built.

JOHN E. HOBERT,
Superintendent of Wharves.



STATE OF NEW YORK,
CANAL COMMISSIONERS OFFICE,
ALBANY, JUNE 21, 1852.

MESSRS. E. & T. FAIRBANKS & Co.,

GENTLEMEN:—Your favor of the 10th, asking my views of the Weigh Lock Scales, manufactured by you, and introduced upon the Erie Canal, is received.

I have no hesitation in saying, that they have fully answered your recommendation in every particular. Their capacity for strength is fully equal to sustain the required burthen. They are not liable to get out of adjustment or repair. The arrangement of the Weighing Beam is admirably adapted to obtain rapid results. I know of no Scale superior to them, in this or any other country.

In great haste, Yours truly,
JOHN C. MATHER,
Canal Commissionor.

OUR RAILROAD MAP---NEW EDITION.

We have now ready a new and revised edition of our Railroad Map, containing corrections and additions from reliable sources, making it as reliable as it is possible to make such a map.

We are prepared to print maps for Railroad Companies to illustrate their reports, either from the stone as it now is, or make any alterations to suit parties. Railroad Companies will find this much more economical than getting up maps especially for their roads.

Price of maps as follows:

Plain, sized,	40 cents.
Colored in outline,	50 "
Colored in States,	75 "

A liberal discount where a number are taken.

THE WHEAT CROP OF OHIO, AND THE WHEAT PRODUCTION AND EXPORTATION OF THE UNITED STATES.

Intimately connected with the railways of the country, is the great subject of BREAD.—Breadstuffs not only make a large item for transportation, but they are the principal element of food which sustains the laborer in constructing Public Works. If the price of a bushel of wheat doubles, the price of a day's labor will very nearly double. This again will increase the cost of grading a mile of railway nearly double, for the same amount of work. In time, nearly all branches of labor will be regulated, in wages, by the price of wheat. It is doubted, by political economists, whether gold is as near a standard of value, as a bushel of wheat. In fact, as men *must* have bread, and the "*must*" scarcely extends to anything else; so *that* is to be regarded as the real standard of value. Now, it must be remarked, that a pound of bread has not borne so high a value in fifteen years, if ever. One reason of this, and the great one here, is that railways have equalized prices, so that at Cincinnati, flour bears nearly the same price as in New York. But, aside from this, the price has been very high throughout the whole country. The great cause of that, we took occasion to point out six months since in the RECORD. This is, that the United States really *has not a great surplus of wheat.* It was not in the country, and consequently a foreign demand beyond the usual average, would at once raise prices. It did so, and prices are much higher than we anticipated. The question now arises what are the prospects ahead! Will bread be much cheaper! That it will not come down soon to the former low prices, we feel convinced. But let us judge of this by the best lights—the statistics of production. We begin with the state of Ohio, which usually raises about *one-fifth* of all the wheat raised in the United States.—The laws of Ohio require the Assessors to ascertain annually, the precise breadth (in acres) of wheat and corn planted, and the quantity produced. After making an allowance for these, or from counties omitted in the returns, we have the following amounts of wheat raised in three successive years, almost exactly:

	Acres planted.	Bushels produced.
In 1850.....	1,818,196	31,119,139
In 1851.....	1,657,252	25,309,225
In 1852.....	1,724,715	22,962,774

Average per acre in 1850		17 bushels.
" " " 1851		15 "
" " " 1852		14 "

It will be seen from this return, that not only the aggregate amount, but the average per acre, declined in Ohio during these three years. The result of last year's crop has not yet been published; but we know enough of its general character, to set it down as an average crop, probably equal to 24,000,000.—The aggregate of the above three years is 80,000,000 and the average, 26,660,000. Accounts have been received from most of the counties in this state, and we may safely say (on the hypothesis that the crop is safely ripened and secured), that there will not be more than an average crop, and hardly that. There is nothing, therefore, in this state, nor, we think, in the United States, upon which to base an expectation that the markets will be suddenly filled, by the surplus crop. If the amount of wheat sown in the country has not been very greatly increased, the surplus for exportaton will not be very large.—The granaries of the West have been pretty thoroughly drained, by the export demand of the past fall and winter. On the supposition that the crop of Ohio is 25,000,000, there will be 14,000,000 bushels for exportation, and the export of the United States, in wheat and flour, cannot be made double that, without raising the price enormously.—The export of wheat from Ohio, in 1853, (last year) was about as follows:

Port of Cleveland	5,000,000	bushels.
" Toledo	3,000,000	"
" Sandusky	2,500,000	"
" Harmar	400,000	"
" Portsmouth	100,000	"
" Cincinnati	1,750,000	"
Miscellaneous	250,000	"
Via Pittsburgh	300,000	"
Aggregate	13,300,000	"

This is very nearly the exact amount of wheat and flour (rendered to bushels,) exported from Ohio in 1853. A minute examination would probably increase it.

Now let us look at the production and exportation in the United States.

In 1849 U. S. crop of Wheat	100,485,944 bush.
In 1850 " " "	143,000,000 "

The crop of 1849 was in many states, especially in Ohio and Indiana, a bad one. Looking, however, to any possible increase, we cannot anticipate the crop of 1854 to be above *one hundred and fifty millions.* Now, the average consumption of wheat, in families using wheat-bread, and occasionally some corn meal and buckwheat, is six bushels per individual, including all classes. Our population is now about 26,000,000, of whom twenty millions are wheat bread consumers. They will consume 120,000,000 bushels, and we shall not have (on the hypothesis of 150,000,000 crop) more than *thirty millions of bushels for export!* In fact, we never have had, in one year, more than that.

Now let us look at the actual *exportation.* The exports of the United States in wheat and flour, reduced to bushels, in 1851 and 1852, were as follows:

	Crop.	Export.
In 1851	101,000,000 bush.	12,038,380 bush.
In 1852	143,000,000 "	16,551,902 "

It will be seen that the proportion was very nearly the same, viz: 12 per cent. of the crop. In a crop of 150,000,000—the same proportion will give 18,000,000 bushels for exportation. But as the price was then low, we must allow for an increased export, under high prices. *Thirty millions,* however, is the very utmost which we can export, without changing the use of wheat flour to that of corn. But how many people will do that?—Such is the ease of living in the United States, that we undertake to say that no considerable number of people will change their habits, in this respect, for anything short of famine prices. It is very evident then, that if the war in Europe continues, deranging, as it does, the sources of supply and the market for breadstuffs, that the prices for breadstuffs, in this country, will continue to range much above the ordinary average.

There is a popular error, as to the production of wheat in the United States, which pervades the commercial circles, as well as the newspapers. It arises from confounding the *capacity* to produce, with the *actual production.* Men look round on the fertile, grain-growing soil of the United States, and say, "we can feed all Europe." Very true, we *can,* but we *do not.* The countries on the Baltic, and the Black Sea, send vastly greater surplusses to market than we do, and always will unless prices rule higher in the United States. The fact is, that on the average prices paid for wheat, the American farmer has no great temptation to indulge in that crop. Notwithstanding all the boasts made of wheat culture on the prairie plains of Wisconsin, Michigan and Illinois, they have as yet made no advance on the wheat culture of Ohio.—The fact is, that the grass and corn which go into cattle and hogs are the most profitable crops. Under *present prices,* it is true the farmer will produce as much wheat as he can; but he had no such prices till after the fall planting was made. The agriculture of a country cannot be changed in one year, or two. At one dollar per bushel the farmer will be glad to cultivate wheat; but he seldom has that temptation, and the great irregularity of prices is one of the drawbacks on that crop.

We conclude then, even if Ohio produces more than an average crop, yet there will be no excessive surplus of grain in this country. If we need heavy surplusses, we must have another year of cultivation to produce them.

BERWICK'S BAY RAILROAD.—We learn of a gentleman just from New Orleans that the Berwick's Bay Railroad is completed forty-one miles, and graded nearly all the rest of the distance, which is forty miles, and the iron obtained. It is expected that the whole road will be completed by the 1st of December next.—*Houston Telegraph.*

Railroads.

CINCINNATI, PERU & CHICAGO RAILROAD.

We have before us "The Exhibit, by the President and Board of Directors" of this Company, from which we gather the following items:

The Company was organized under the General Railroad Law of Indiana, in June, 1853. In January, 1854, a consolidation was effected with the "Union and Peru Company" by which arrangement the original line of this company was abandoned, and that via Marion adopted instead. The line will now commence at Marion, on the south, running northwardly through Peru, Rochester and Plymouth, and unite with the Michigan Southern road at Laporte, and thence, over that line to Chicago.

The connection southwardly from Marion, will be made over the Cincinnati, Cambridge and Chicago, the Cincinnati, New Castle and Michigan, and Cincinnati Western companies, all three of which have been consolidated into one line under the title of Cincinnati and Chicago Line.

The length of the Cincinnati, Peru and Chicago line proper, is 97 miles, being but 3¾ miles longer than an air-line; of this distance, 23 miles are level; 39 miles between 10 and 20 feet per mile; 25 miles between 20 and 30 feet, and 8 miles of 40 feet, being the maximum. The minimum curvature is 4584 feet, and exists only at Laporte and Peru, the other curves are 5730 and 11,460 feet. The gauge is uniform from Cincinnati to Chicago, a distance of 275 miles; also between Peru and Columbus, O, and Indianapolis.

The local subscriptions have reached $70,000. The right of way has been secured for nearly two-thirds of the way, at a cost not exceeding $80 per mile.

Messrs. French, Tyner & Co. are the contractors; they furnish rolling stock to the amount of $125,000, and expect to have the road in running order, by August, 1855.

The report contains estimates of prospective business, population, resources, etc., of the country along the line, by which it appears that this cannot but be a paying road.

The Engineer's report, accompanying the exhibit, gives the items of the elements of the line, cost, grades, etc., from which we gather that the estimated cost of the road completed will be $2,215,431. Or per mile, $22,840.

MILWAUKEE & MISSISSIPPI, AND SOUTHERN WISCONSIN RAILROADS.—We learn from the last Milwaukee News that arrangements have been made whereby these two companies have been consolidated. The particulars of the arrangement have not yet been made public.

CRAWFORDSVILLE, FRANKFORT, KOKOMO, & FORT WAYNE RAILROAD.

About a year since we gave a short notice of this company since when we have not heard anything of it, until we received a copy of the First Annual Report of the President and Engineer, from which we learn that the work has been going on quietly yet effectively.

The Board met at Frankfort on the 8th inst., when the report was read, and the following Board and officers elected, viz:

A. M. Puett, Rockville; A. Thompson, Crawfordsville; S. Kenworthy, Darlington; John Majors, J. Douglas, R. Frazier, N. Bell, M. Burton, Clinton county; J. McClure, Grant county; J. D. Pulse, Huntington county; Hon. Sam'l Hanna and J. L. Williams, Fort Wayne; A. M. Puett was elected President; John W. Blake, of Frankfort, Vice President; Jackson Douglas, Secretary; Wm. P. Dunn, Treasurer.

The entire line was put under contract some six months since, to Messrs. Brown, Bagg, Jackson & Co., and a large amount of work has already been done upon the southwestern end of the line, between Russiaville and Crawfordsville, where it will unite with the Evansville and Crawfordsville road, a large portion of which is now running. By the terms of the contract the entire line is to be completed in 1856, at $23,000 per mile.

The means of the company, reported as available are—

Subscriptions, - - - - -		$490,000
Of which there is cash,	$163,000	
N. A. & Salem RR. Co. -	35,000	
		$198,000

Total length of the road is 51 miles, of which 40.52 are a straight line. The maximum grade is 40 feet per mile, and nearly one half of the entire distance is level.

This line has numerous and valuable connections and intersections with other lines thrnughout the Wabash Valley. It will also form a very direct line between Fort Wayne and St. Louis, by way of Terre Haute and the Atlantic and Mississippi, or Brough's Road.

The work upon the line is being pressed vigorously by the Executive Committee and will doubtless be completed within the contract time.

JACKSONVILLE & CARROLLTON RAILROAD.

ENGINEER'S REPORT.

We are indebted to the Alton Telegraph for an abridgment of this report, from which we condense the following:

The survey extends from Jacksonville to Alton, about 60 miles, via Manchester, Whitehall, Carrollton, and Jerseyville. The estimated cost is $1,200,000. At Jacksonville it connects with the Great Western, Illinois, road to Springfield, on the east, and the Illinois river at Naples, on the west. A large portion of the line is prairie, and extremely favorable for railroad construction.

The report also contains estimates of receipts founded upon the products of the counties through which the road passes, which give the annual income of the road when completed, at $240,000, or about 20 per cent. upon the cost.

GREAT WESTERN, CANADA, RAILROAD.

We take the following from the Detroit Tribune:

The annual meeting of the stockholders of this railway was held at Hamilton last Monday.

Mr. Robert W. Harris, President, presented the annual report, which we condense, retaining all its material facts and statements.

The total amount expended on the road up to April 30, 1854 was £2,705,264, eight shillings and sixpence, or $10,821,056, (Canada currency) 13,093,477 76 sterling, (we do not know which currency the report states its pounds in.)

A recommendation is made that the revenue account be made up to the 31st of January and July each year.

If this is adopted, another meeting of the stockholders will be held in September next for the purpose of auditing accounts and declaring dividends.

The directors have entered into contracts to place upon the line the followtng stock, which they anticipate will be actually necessary to acommodate traffic of next winter, viz:

48 Locomotive Engines, for passenger and trains.
8 Ballast trains.
45 1st Class Passenger cars.
40 2d " " Emigrant cars.
20 Baggage, Express and Post Office Cars.
100 Platform Cars.
900 House Freight Cars.
60 Cattle and Sheep Cars.
400 Gravel Cars.

The question of purchasing the Erie and Ontario Railroad, which has formed the subject of a special report from the Board, will be taken into consideration at the adjourned special general meeting, to be held on the 19th of June.

Since the last annual meeting, the Directors have concluded an advantageous contract for the lease by this company, of the railway portion of the Suspension Bridge across the Niagara River. By the terms of that contract, every risk of the soundness and stability of the structure rests entirely with the Suspension Bridge Company, the Great Western Company being totally relieved of all responsibility in the event of non-success of the principle upon which the Bridge is constructed.

A contract for the construction of the Sarnia line haa been entered into. By the terms of this cnntract, the line is to bo completed within twelve months of the giving of a notice to the contractors to commence operations. The directors feeling the great importance of the Sarnia line, as effecting the permanent interests and security of the company, in December last gave notice to the contractor to purchase and clear the right of way, so as to be in a position to carry forward the works at an early day.

The Directors also hope to open the Galt branch to the public in in a few weeks.

The Directors have given notice of an application to Parliament for power to construct a brauch of about twenty-eight miles from the main line to Malden, immediately opposite the point to which a brarch of the Southern Michigan line is to be brought; and they have also given notice of application for a line of seven miles, to connect Brantford with the main line.

Two first class steamers are in process of construction to run between Hamilton and Oswego.

Mr. Cameron proposed a resolution to the effect of voting the sum of $5000 to Sir Allen MacNab, as a testimonial to that gentleman in consideration for the numerous services which he has rendered to the company since they obtained their charter, which having been seconded by Mr. Buchanan, was carried unanimously and with applause.

The following Board of Directors were chosen for the ensuing year.

R. W. Harris, Wm. Longsdon, Col. Gourlay, E. Corning, J. M. Forbes, R. Judson, H. McKinstry, Wm. Dickson, J. B. Smith, J. W. Brooks, C. J. Brydges.

St. Charles Air-Line Railroad.

The Ogle County, Illinois, Reporter, says: "On account of the closeness of the Eastern money market, and the almost unprecedented demand for money, the contractors of this road have been unable to make such arrangements as to enable them to place any considerable portion of the line in process of construction during the present season, as they intended. We learn, however, that the present force of about three hundred men, now employed on the first division, will be retained; and as soon as the work is completed to St. Charles, they will commence the second division, and finish the road westward as fast as possible. By this it will be seen that the cherished hope of our citizens, of seeing the steam horse upon Rock River the present year, will not be realized; but we have reason to believe that both the Contractors and Board of Directors have done everything in their power to meet the expectations of the people along the line, and the work will still be carried forward as rapidly as the money can be procured for the purpose."

SUBMARINE TELEGRAPH ACROSS THE ATLANTIC.

LETTER BY LIEUT. MAURY.

In one of our recent issues we mentioned the fact of the bottom of the sea between New Foundland and the English Coast having been explored, and its fitness for telegraphic purposes amply demonstrated. We now give Lieut. Maury's able letter upon the subject; and trust that his suggestions will be acted upon without delay.

SIR :—The United States Brig Dolphin, Lieutenant Commanding O. H. Berryman, was employed last summer upon special service connected with the researches that are carried on at this office concerning the winds and currents of the sea.

Her observations were confined principally to that part of the ocean which the merchantmen, as they pass to and fro upon the business of trade between Europe and the United States, use as their great thoroughfare.

Lieutenant Berryman availed himself of this opportunity to carry along also a line of deep sea soundings from the shores of Newfoundland to those of Ireland.

The result is highly interesting, in so far as the bottom of the sea is concerned, upon the question of a submarine telegraph across the Atlantic, and I therefore beg leave to make it the subject of a special report.

This line of deep-sea soundings seems to be decisive of the question as to the practicability of a submarine telegraph between the two continents, in so far as the bottom of the deep sea is concerned.

From Newfoundland to Ireland the distance between the nearest points is about 1,600 miles; and the bottom of the sea between the two places is a plateau, which seems to have been placed there especially for the purpose of holding the wires of a submarine telegraph and of keeping them out of harm's way. It is neither too deep nor too shallow ; yet it is so deep, that the wires, but once landed, will remain forever beyond the reach of vessels' anchors, icebergs, and drifts of any kind; and so shallow that the wires may be readily lodged upon the bottom.

The depth of this plateau is quite regular, gradually increasing from the shores of Newfoundland to the depth of from 1,500 to 2,000 fathoms as you approach the other side.

The distance between Ireland and Cape St. Charles, or Cape St. Lewis, in Labrador, is somewhat less than the distance from any point of Ireland to the nearest point of Newfoundland.

But whether it would be better to lead the wires from Newfoundland or Labrador is not not now the question; nor do I pretend to consider the question as to the possibility of finding a time calm enough, the sea smooth enough, a wire long enough, a ship big enough to lay a coil of wire sixteen hundred miles in length; though I have no fear but that the enterprise and ingenuity of the age, whenever called on with these problems, will be ready with a satisfactory and practical solution of them.

I simply address myself at this time to the question in so far as the bottom of the sea is concerned, and as far as that the greatest practical difficulties will, I apprehend, be found after reaching soundings at either end of the line, and not in the deep sea.

I submit herewith a chart showing the depth of the Atlantic according to the deep sea soundings, made from time to time on board of vessels of the navy, by authority of the department, and according to instructions issued by the Chief of the Bureau of Ordnance and Hydrography. This chart is Plate XIV. of the sixth edition of Maury's Sailing Directions.

By an examination of it, it will be perceived that we have acquired by these simple means a pretty good idea as to the depression below the sea-level of the solid crust of our planet which underlies the Atlantic Ocean and constitutes the basin that holds its waters.

A wire laid across from either of the above named places on this side, will pass to the north of the Grand Banks, and rest on that beautiful plateau to which I have alluded, and where the waters of the sea appear to be as quiet and as completely at rest as it is at the bottom of a mill-pond.

It is proper that the reasons should be stated for the inference that there are no perceptible currents, and no abrading agents at work at the bottom of the sea upon this telegraphic plateau.

I derive this inference from a study of a physical fact which I little deemed, when I sought it, had any such bearings.

It is unnecessary to speak on this occasion of the germs which physical facts, even apparently the most trifling, are often found to contain.

Lieut. Berryman brought up with Mr. Brooks' deep-sea sounding apparatus specimens of the bottom from this plateau.

I sent them to Prof. Bailey, of West Point, for examination under his microscope. This he kindly gave, and that eminent microscopist was quite as much surprised, as I was to learn, that all these specimens of deep-sea soundings are filled with microscopic shells ; to use his own words, "not a particle of sand or gravel exists in them."

These little shells, therefore, suggest the fact that there are no currents at the bottom of the sea whence they came—that Brooks' lead found them where they were deposited in their burial place after having lived and died on the surface, and by gradually sinking were lodged on the bottom.

Had there been currents at the bottom, these would have swept and abraded, and mingled up with these microscopic remains the debris of the bottom of the sea, such as ooze, sand, gravel, and other matter; but not a particle of sand or gravel was found among them. Hence the inference that these depths of the sea are not disturbed either by waves or currents.

Consequently, a telegraphic wire once laid there, there it would remain, as completely beyond the reach of accident as it would be if buried in air-tight cases. Therefore, so far as the bottom of the deep sea between Newfoundland, or the North Cape, at the mouth of the St. Lawrence, and Ireland, is concerned, the practicability of a submarine telegraph across the Atlantic is proved.

The present state of Europe invests the subject of a line of telegraphic wires across the Atlantic with a high degree of interest to the government and people of the United States. A general European war seems now almost inevitable; the attitude which this government will assume with regard to all the belligerent powers that may be involved in that war is that of strict, impartial neutrality.

The better to enable this government to maintain that position, and the people of the United States to avail themselves of all the advantages of such a position, a line of daily telegraphic communication with Europe would be of incalculable service.

In this view of the subject, and for the purpose of hastening the completion of such a line, I take the liberty of suggesting for your consideration the propriety of an offer from the proper source, of a prize to the company through whose telegraphic wire the first message shall be passed across the Atlantic.

I have the honor to be, respectfully, &c.,

M. F. MAURY,
Lieut. U. S. Navy.

GREAT BRITAIN AND FRANCE.

In the course of a speech made in Congress, by Mr. Merrill, he furnished some interesting statistics, in relation to France and Great Britain. The latter, he said, has an area of 120,000 square miles, France an area of 200,000 square miles; Great Britain a population of 24,000,000, France a population of 32,000,000. First. Agricultural productions. I select the single article of grain, as this is the staff of life, for rich and poor. Grain—bushels per given average—Great Britain 414,000,000, round numbers. France 369,000,000. Manufactures—annual product of Great Britain, $2.365,000,000. France $360,000,000. (Mark this).

The comparative commercial and manufacturing power of Great Britain and France:

	France. Men power.	G. Britain. Men Power.
Animate power	6,303,019	7,275,497
Inanimate power viz:		
Mills and hydraulic engines	1,500,000	1,200,000
Windmills	253,333	240,000
Wind and navigation	3,000,000	12,000,000
Steam engines	480,000	6,400,000
Totals	11,536,352	27,115,497

Thus, the total inanimate power applied to the arts in France scarcely exceeds the fourth of that applied in the United Kingdom of Great Britain; and the whole animate and inanimate power of the latter applied to manufactures and commerce is nearly treble the amount of that of the former. This is not all; see the comparative consumption in the two countries of two of the most pleasant and essential articles of human subsistence. Total consumption of sugar in all Europe, per year, average calculation, 500,000 tons, of which 180 tons are consumed in Great Britain and 90 tons in France. Annual consumption of coffee:—Total consumption of Europe and the United States, 138,500 tons, nearly one-fourth of the whole consumed in the United States and Great Britain. In the latter, the consumption is about one pound per head; in the former it is upwards of three pounds.—*Bicknell's Reporter.*

BINGHAMPTON RAILROAD.—The following named gentlemen were elected officers of this Company: Henry Stephens, President: Dan'l S. Dickinson, Vice-President; Clinton F. Page, Secretary; T. B. Fitch, Treasurer; Engineer and Superintendent, H. B. Gilbert. Eight miles of track are laid, and the whole will be completed in September.

☞ The Canton Company of Baltimore, have published their annual report to their stockholders. It is highly stimulative to speculation on the stock, which it shows to be worth nearly three times the present market value.

KENTUCKY LOCOMOTIVE WORKS.

We would call attention of railroad men to the advertisement of Messrs. Olmsted, Tennys & Peek, of the Kentucky Locomotive Works, Louisville. They have a very extensive establishment, and are fully prepared to do all kinds of railroad work, including castings, etc. We condense the following from a detailed description of these works, in the Louisville Courier:

First, the Foundry, a brick building 20 by 60 feet, in which are all the tools, etc., necessary for carrying on a most extensive business. The iron is melted by a cupola and large air-furnace, and is calculated to melt fifteen tons of pig iron daily, or about two hundred and twenty-five thousand dollars worth per annum.

We next come to the Car Forge, 30 by 70 feet, for the forging of the wrought iron bars and bolts used in the construction of cars.—There are eight forges in this shop, all supplied with wind from a blower run by steam, thus doing away with the extra labor of the helper in keeping up the fires.

A door from the Car Forges leads into the machine shop fronting eighty feet, and two hundred and fifty feet deep. The roof is constructed on a new principle; not a post is seen in the whole length of this room. About one third of the way from the entrance is the door to the engine room in which is placed the beautiful engine of 120 horse power, driving all the machinery of the establishment.

Passing down one side of this great shop and up the other, we see every variety of machinery and tools for the working of iron.—We would gladly describe many of the tools here employed did our limits permit, but our readers must go and see for themselves. We must, however notice the beautiful parts of unfinished work for Locomotives which we saw throughout the shop, and we are confident it cannot be surpassed anywhere.

We next come to the Locomotive Forge Shop, where is done all the forging of frames, bolts, etc., for the engines. This building is 60 by 100. Eighteen large forges and a powerful tilt hammer are needed to do this portion of the work of the establishment, and an addition of one hundred feet in length by sixty feet in width, is to be erected immediately for the same purpose.

In leaving the locomotive forge, we pass through the setting up shop into the boiler shop, a brick building 40 by 50 feet, in which are made the boilers and tanks. We noticed here a pair of shears for cutting iron and a punch made at the establishment.

We next meet the erecting shop, where a large number of men are busily employed in setting up locomotives.

Passing again through the machine shop, we ascend a flight of steps to a large gallery, of which there are two in this shop, one of which is devoted to tin and copper work, and the other to brass finishing. From this gallery we proceed to the third story of the carpenters' shop, used as a pattern room. Descending thence to the second and first stories of this building, each 90 by 45 feet, we found both rooms filled with all kind of tools for the working of wood.

Adjoining the carpenters' shop, is a two story brick car shop 114 by 56 feet, for finishing and setting up cars.

Coming again into the open air, we cross a lane of 60 feet, which brings us to the paint shop, a frame two story building, 150 by 45 feet, in the second story of which are the finishing and upholstering rooms.

We can barely notice their immense coal and lumber yards enclosed, and also extending on the west side of Tenth street, one whole square, where are situated the extensive stables and sheds of the Company. On this lot they have a large frame warehouse, filled with iron and steel, and supplies of all kinds necessary to carry on the business, and are now erecting a brass foundry large enough to meet their wants.

Take it altogether, it is the most complete establishment of the kind we have seen, and one which our citizens should prize highly and pride themselves justly upon.

ON THE USE OF ANTHRACITE COAL IN LOCOMOTIVES.

Extract from a letter from A. Pardee, Esq., to Edward Miller, Esq., Chief Engineer of the North Pennsylvania Railroad.

"The use of anthracite coal as fuel, was commenced on the Beaver Meadow Railroad, in 1836, in engines built by Eastwick & Harrison, and has been continued to the present time in a portion of their engines.

"On the Hazleton road we commenced its use in 1838, in the 'Lehigh' engine, built by Eastwick & Harrison, and in 1839 in the 'Hercules,' by same makers. Both engines have been in constant use during the season of navigation, say eight months per year, up to and including 1852, when the 'Lehigh' was taken into the shop to be rebuilt. The 'Hercules' is still in use.

"Both engines had originally copper flues, which were replaced by iron ones after about two years' use, the copper having been worn out at the end next to the fire box, by the particles of coal drawn in by the draft.

"Both engines have now the same fire boxes with which they were turned out of the maker's shop, excepting about one foot of the lower part which has been once renewed.—The iron flues now in use are those put in to replace the copper—never having been renewed either in whole or in part. Altogether, we have in use on this road eight locomotive engines, three built by Eastwick & Harrison, one by M. W. Baldwin, and four in our shops at Hazleton.

"We have never used other fuel than anthracite coal, excepting for the purpose of kindling fires. The engines have been in use during the season of navigation from two years ago, (when the last were built,) up to the time of the oldest engines named above, and we have never renewed a fire box or set of flues, except the repairs to the two engines named. As far, therefore, as our experience goes, anthracite coal for fuel is not so destructive to fire boxes and flues as has been generally argued and supposed. We wear out about two sets of grate bars in the season's use of an engine.

"*As to the character of the Road.*—In starting from the Lehigh at Penn Haven, we had, while using a part of the Beaver Meadow road, an ascending grade averaging 80 feet per mile for 5 miles; then 140 feet per mile for 1¾ miles; then 60 feet for 3½ miles, and then a grade of 12 feet per mile for 3½ miles, to the intersection of the various branches leading to the mines. In descending as you will perceive, mostly by gravity, the coal fire remained entirely inactive, having no artificial draft by fans or otherwise, except that caused by the exhaust steam; while in ascending with a load of empty cars, equal to the whole power of the engine, the fire to generate the necessary steam must be stimulated to the most intense activity; thus making, apparently, a far more unfavorable state of things for the use of coal than on a road where the grades are more uniform, and in consequence the fire acted upon by a more uniform draft.

"I am aware that it has been said that coal might do for short roads, but that on long roads the continuous intense action of the heat would destroy the fire box and flues.

"Now, it strikes me as absurd to suppose that on a road of any length a fire need be made more intensely hot, or that any part of the boiler could be more heated, than is necessary to drive an engine and full train up ten miles of such grades as are specified above, or that a continuous equable heat for eight or ten hours can be worse than continuing the same heat for an hour, then a moderate fire for an hour, and so on alternately, with the consequent expansion and contraction, and this continued day after day for eight months annually during 15 years.

"I have entered into this subject, perhaps, to a somewhat tedious length, my object being to satisfy yourself and others, that anthracite coal has been used successfully for a series of years in this region as fuel for locomotive engines not differing materially from the ordinary mode of construction."—*Jour. Franklin Inst.*

CLINTON LINE RAILROAD.

It is with much pleasure that we give place to the following letter from H. N. Day, Esq., to the Clevelaud Herald. We gave the notice as we found it but expressed our doubts as to its correctness. We are happy to have our opinion verified.

Office C. L. & C. L. Extension Railroads,
Hudson, 8th June, 1854.

Gents:—My attention was called, while in New York last week, to an article purporting to be taken from your issue of Monday, stating that "one of the contractors on the Clinton Railroad, east of Hudson, had paid off and discharged the men is his employment, for the reason that the company had failed to make and pay the estimates necessary for the continuation of the work." I find on my return home that all the estimates on the Clinton Line Railroad have been regularly and fully made from month to month, without failure, from the commencement of the work; that no contractor has withdrawn, or materially, if at all, reduced his force, with the exception of a single party on one section of a mile, now about two-thirds completed, and the whole force discharged by him was less than fifteen men; that this contractor has been promptly paid on every estimate in full, as his receipts now on file in the office show; and that the only reason assigned at the time for the discharge of the men, was the wish of the contractor to sub-lease the work.

Permit me to add that the republication of the article in question, representing information to have been received "that within a few days work will be suspended on several other roads in this vicinity," caused much apprehension in railroad circles at the East, and has occasioned much anxiety to know which of the few Companies in the vicinity of Cleveland, now engaged in railroad construction, make up the "several" which are about to suspend their work.

Very respectfully, your ob't serv't.

H. N. DAY,
Pres't C. L. RR. Co.

IRON SUSPENSION BRIDGES.

The Buffalo Democracy has no faith in Iron bridges, and for the following, among other reasons:

"There is an inherent and latent defect in iron that will forever make it an unreliable material for bridge structures of the suspension form. It suffers a gradual loss of tenacity under use. The very best brands of iron, and the most carefully made, are not exempt from this defect. When constantly subjected to concussion, tension and vibration, the metal granulates. It loses in a greater or less degree that peculiar relation and arrangement of its constituent particles, which gave to it the quality of tenacity. So that an iron suspension bridge which, when new, would sustain an almost unlimited weight, will at length probably become unsafe—though not a trace of weakness would be discovered in any of its piers or ground fastenings.

"It is within the recollection of most of our readers that the vibration produced by the marching of a part of a regiment of infantry under arms across a French suspension bridge in the neighborhood of Paris caused it to break down at one end. The soldiers sank in the river by platoons—a monster calamity! So of the suspension bridge at Broughton, near Manchester, in the year 1831. It was broken down by the march of a single company of sixty soldiers. The whole of them were precipitated into the river. More than one-third of the suspension rods of the celebrated Menai Bridge were broken by a storm of the 7th January, 1839. Both of its carriage-ways were rendered impassable—some 200 feet of them being torn out. The chain bridge in Morpeth, Northumberland, fell down in 1830, under the vibration produced by the crossing, in a dense body, of a crowd returning from the exhibition of mountebanks. The well-known chain pier in Brighton, England, had several of its suspending rods broken in a storm in October, 1853, and a considerable portion of its roadway in two of the divisions carried away. Last week, May 18, during a storm of wind and rain, the suspension bridge across the Ohio river at Wheeling was completely blown down and flung a wreck into the water bottom side upward. Its massive cables were twisted off and its abutments injured. The bridge was considered in this country to be a model of architecture, and among the very best of the suspension class in the world."

The Great Western Railroad is to be connected with the New York Central line by an iron suspension bridge at Lewiston, now nearly completed under the direction of Mr. Roebling.

Among other journals, the Rochester American contains a reply to the above, in which was the following letter, which we give for the benefit of our scientific readers:

EDITOR OF AMERICAN—DEAR SIR:—Permit me to make a few remarks in reply to the Buffalo Democracy, on the subject of iron bridges, at the same time asking your opinion upon the following probabilities, as to the causes of accidents to iron structures, mentioned by that paper:

1. The heat in summer, and cold in winter, sensibly affect large bodies of iron; and Mr. Stephenson being aware of the fact when repairing the Menia Straits Bridge, allowed for the same. The entire length of the tube is 1832 feet 8 inches, and the extent of the motion hitherto observed in each half is 3-16ths of an inch. By a simple contrivance, a daily self-acting record is given of the amount of its contraction and expansion.

As you are aware, lamentable accidents have occurred by the iron beams of buildings, contracting from cold, and thus bringing down the whole structure to a mass of ruins, while in some buildings a bulging wall is brought back to its position, or saved from falling, by inserting pieces of hot iron, and in that state screwing them tightly up. When the iron cools it contracts, and either restores the straightness of the wall or binds it up.

2. May not magnetism have something to do with it? It is known to many that the iron bars of windows—much used in England to prevent thieves from entering—which have stood a long time in an erect position, grow permanently magnetic, the lower end being the north pole, and the upper end the south pole. Iron tongs, pokers, etc., from being heated and set to cool again, in an upright position, gain a magnetic property. Sometimes iron bars, by long standing in a perpendicular position, have acquired the magnetic virtue in a surprising degree.

A gentleman in England writes thus: "I remember a friend hanging up two pieces of rod iron, one in the direction of the magnetic dip and the other horizontal. After a lapse of three years they were examined; the one that had been hung in the direction of the dip snapped with great facility, while the horizontally hung piece could be twisted into a knot." This is a subject deserving, it seems to me, the consideration of scientific men who construct iron structures.

Note, again, the accidents upon railroads. Do not a greater amount of accidents on the lines lying east and west take place in the axles of the carriages and wheels, and those north and south from the rails snapping!

Yours, truly,
JOSEPH FITZPATRICK.

PITTSBURGH, MAYSVILLE, AND CINCINNATI RAILROAD.

The Morgan *Herald*, from which we copied an article in last week's issue about this road, and accidentally omitted the credit, has the following additional:

CHEERING NEWS FOR OUR ROAD.—We learn from a reliable source that the Pittsburgh, Maysville and Cincinnati Railroad Company has secured, from the commissioners of Guernsey county, the sum of $100,000 by a sale of the stock held by said county in the Central Ohio Railroad Company. This sum is to be applied to the construction of our road (the Pittsburgh, Maysville, and Cincinnati) east of the Muskingum river. We learn further that the whole amount has been placed at the disposal of our company, the stock being duly transferred.

This transaction is really worth much more than the above sum to the company. It adds to the reputation of our road and will beget for it confidence among capitalists and railroad men at a distance. A neighboring county has $100,000 stock in a road almost completed, safe and solvent investment, yet their commissioners at the request of their people, unconditionally transfer their stock to our road. That is a home transaction, where the condition and prospects of both roads are well understood, and it will tell for the interests of our road abroad.

This fact speaks well for those having charge of our road. To their discreet and prudent management may in a great measure be attributed our present favorable position. Quietly and unobtrusively have they pushed forward the work, and now they have the proud satisfaction of knowing that ours stands second to no project in Ohio.

THE ATLANTIC AND PACIFIC RAILROAD COMPANY.

The New Orleans Daily Delta, in speaking of the Texas portion of this line, says:

"We had the pleasure of a visit, yesterday from Col. Mills, of Texas, who furnished us with some very interesting and valuable information, in regard to the present condition of this enterprise and its future prospects.—The Atlantic and Pacific Company will commence the construction of this great work at the town of Marshall, a distance of about fifty miles from the state line, and work both east and west—east, till the road reaches the state line. Sixty-five miles of the road have already been placed under contract, and bonds have been given which will secure the completion of this distance within eighteen months. This contract includes a branch of the work that will connect with Lake Caddo, near the growing town of Jefferson, a distance of fifteen miles. It will be completed by the 1st of April next, and will eventually form a portion of the line running in a northeasterly direction to connect with Fulton in Arkansas.

Major Blanch, the chief engineer, and four assistants, are now at the St. Charles Hotel, on their way to Texas, where, on their arrival, they will commence the surveys of this road, and on the 1st day of July the contractors are to have four hundred hands at work.

There cannot be the least doubt of the prompt completion of this Texas road. The liberality of the Legislature has placed it—so far as pecuniary matters are concerned—on a footing superior to any other railroad enterprise in the country. The large grant of land will not only be sufficient to construct the work, but it is confidently asserted will leave a surplus of a million or two in the treasury of the company. This company has acquired four distinct charters for a road from the eastern boundary of Texas to the Rio Grande, to each of which the Legislature has granted 10,240 acres of land for every mile of road to be built, making an aggregate for the whole of these charters, now owned by the company of 32,000,000 acres—more ground than we should care to walk over in a day; besides which, they have the state charter, containing a grant of 12,800 acres for every mile of road to be built, amounting in all to about 11,000,000; and added to the previous charters owned by the company, gives a grand aggregate of 43,000,000 acres.

The officers of the Atlantic and Pacific Company are R. J. Walker, President; F. M. Dimond, Vice President; Samuel Jandon, Secretary, and A. T. Smith, Treasurer. Their office is at No. 63 Beaver street, New York.

CHARTERS VALLEY RAILROAD.—The Wheeling (Va.) Times say the work has fairly commenced on the line of this improvement.—Ground has been broken at various points along the route, and the determination appears to be to push the work as vigorously as possible. It is confidently expected that the entire road will be completed and in running order, within a year from this date.

CINCINNATI STOCK SALES.

AT THE STOCK BOARD.

MERCHANTS' EXCHANGE

And at Private Sale.

BY HEWSON & HOLMES.

For the week ending Wednesday, June 21, 1854

Up to the time of going to press no report had been received.

MONETARY.

The state of monetary affairs at the East is very heavy. Money is in demand among the Brokers, and advanced rates of interest are readily obtained.

Foreign Exchange is plenty and dull, nevertheless the drain of specie is pretty heavy. Notwithstanding the apparent panic, there seems to be no grounds for fearing any monetary crisis, inasmuch as business generally never was more sound. The trade of the country is healthy, and possesses every necessary element of prosperity, except confidence in the future.

The depression of the Money Market has had its necessary effect upon Stocks, the market for which has been very much depressed, with little hopes of any permanent rally for some time. Nevertheless our roads are doing a largely increased business over the same months of last year.

The following, among other sales of Stocks have been made—

By A. H. Nicolay, June 12th:

$5,000 Gr. West. Ill. RR. Co. 10s. 1868	89 50
5,000 " do. do. do. do.	89 00
8,000 Tol. Nor. and Cleve. RR. Bonds, 7s, '63	88 00

5,000 " do do do	69 50
5,000 " do do do	68 00
5,000 Scioto and Hocking Valley R. R. Co., 7s, 1865	69 00
5,000 Lyons, Iowa, Cen., 7s, '74	9 00
5,000 " do do	10 25
1,000 " do do	10 50
1,000 " do do	11 25
2,000 " do do	12 00
1,000 " do do	12 25

On the 15th—

2,000 Cleve. and Pitts. 7s. conv. '73	79 25
5,000 " do do	79 00
13,000 Great Western, Ill. 1st mort 10s '68	88 75
5,000 " do do do	88 50
4,000 Sandusky, Mans. & New'k, 1st mor. 7s, '74	70 00
100 Shares Atlantic & Pacific RR; on which $1 per share has been paid in	90 00
$1,015 Interest coupons of Miss. & Rock River Junction, 1st mort. Bonds, lot	300 00

By the same, June 16th—

$3,000 Sand. Mans. & Newark RR. Co	61 00
100 Shares N. Y. Central Road	101 75
150 Shares N. Y. and Erie RR	66 50
200 Shares Long Island RR	26 00
50 Shares Mad. and Indianapolis RR	38 00
300 Shares Cleveland and Toledo RR	88 12½
100 Shares Cleve., Col. and Cin. RR	116 50

At the West the Money Market has continued stringent for the past week, though the demand has not been very active. We have nothing like a panic to note, or any great pressure in the market "Number one" paper finds ready purchasers at 1 per cent; but less known is closely scrutinized at 1½@2 per cent. per month. There is great caution exercised in the market, awaiting further developments.

The Stock Market is quite inactive and sales are made only by compulsion. The recent dividend declared by the Little Miami road being payable in stock, together with the heavy reduction in fares, consequent upon the recently commenced opposition to the Cincinnati, Hamilton and Dayton Company, have tended to depreciate the stock in the market. This reduction of fare will benefit the traveling community, but wherein the contending companies hope or expect to reap any benefit from the present, to them, ruinous prices, we cannot discover.

MOBILE AND OHIO RAILROAD.—The sixth division of this work consists of the main line in Kentucky, forty miles in length, and the Paducah and Columbus branches, respectively fifty-nine and five miles long; making a total length of the division, main road and branches, one hundred and four miles; of which seventy-two and five eighths are in progress. The Paducah branch is all in the hands of one efficient company, who have now fifteen miles at the Paducah end nearly ready for the tracks, and can complete the whole by the 1st of December next. Thirteen miles and a half in Hickman county, Kentucky, including the Columbus branch, has made some progress to the amount of $5,000, but will be urged rapidly on as soon as the remaining thirty-one and a half miles in Fulton and Ballard counties can be put under contract.—Iron rails have been ordered to Paducah in moderate quantity, that the track-laying may be commenced as early as practicable. With a continued supply of rails at Paducah, the tracks may reach Jackson, Tenn., by the 1st Oct., 1855.

RAILROAD BRIDGE AT ROCK ISLAND: INJUNCTION.—We understand that a bill has been presented to Hon. Judge Dyer, U. S. District Judge, for the District of Iowa, against the railroad companies and the contractors, praying an injunction against them, enjoining the building of the bridge, and the 12th of June fixed upon as the time, and Iowa City as the place, for hearing the application.

COVINGTON AND OHIO RAILROAD.—A meet was held at Kanawha Court house, on the 26th ult., for the purpose of considering the ways and means for prosecuting the work upon the Covington and Ohio road, the sum granted by the state being exhausted. Appropriate resolutions were adopted for holding a grand convention of the friends of the road at White Sulphur Springs on the first Monday in August prox. Delegates from all the counties interested in Railway improvements are invited.

CENTRAL OHIO RAILROAD.—The laying of the iron of this road westward from the Ohio river has been commenced. Thus rendering the prompt completion of the road certain.

OFFICE CINCINNATI WESTERN RR. CO. }
Cincinnati, June 13, 1854. }

THE Stockholders of the Cincinnati Western Railroad Co., are hereby notified that the third instalment of five dollars per share, due the 20th July next, and the fourth instalment of five dollars per share, due the 20th August next, are called for, payable at the office of the Company, No. 33 west Third street.

By order of the Board. CALEB B. SMITH,
je21 President.

Pittsburg, Philadelphia, Baltimore and New York!

FARE REDUCED! New route opened to New York, all the way by Railroad, via Cincinnati, Hamilton and Dayton Railroad!

Dangers and annoyances of the Lake Shore route at Erie and Harbor Creek avoided.

The quickest, cheapest and most pleasant route to Pittsburg, Philadelphia, Baltimore and New York. Depot in the west end of the city.

Only route via Pittsburg and Philadelphia by which through tickets can be obtained from Cincinnati to New York.

One less change of cars than any other route.

Passengers leaving Cincinnati on 6 o'clock Morning Train of Cincinnati, Hamilton and Dayton Railroad, go through to Crestline without change of cars, and after having thirty minutes for dinner, proceed by Ohio and Pennsylvania Railroad, arriving in Pittsburg at 8 o'clock P. M. Leave Pittsburg via Pennsylvania Central Railroad, at 9 o'clock P. M., and arrive in Baltimore and Philadelphia at 12 o'clock and 30 minutes (noon) next day; and from thence via Kensington and Jersey City, or Camden and Amboy Railroads, arriving in New York at 4 P. M.

Second Train—Leaves Cincinnati, Hamilton and Dayton Railroad at 8 o'clock and 20 minutes every morning: arrives at Crestline at 4.20 P. M., and Pittsburg at 12 o'clock and 30 minutes, midnight: and after a comfortable night's rest, resume by 7 o'clock A. M. Train, arriving in Philadelphia and Baltimore at 12 o'clock and 30 minutes, midnight.

The only offices in Cincinnati at which through tickets can be purchased from Cincinnati to New York via Pittsburg and Philadelphia, are under the Spencer House, and one door below the Gibson House on Walnut street,

FARE.

To Railroad Contractors, Quarry Men, &c.

THE attention of those interested is called to ASH'S IMPROVED HORSE POWER ROCK DRILL, for Railroad Excavation, Stone Quarrying, Well Boring &c.

This Drill is worked by HORSE POWER, requiring but one horse and one man, to keep it constantly at work, with great ease and velocity, performing 60 strokes per minute. It is cheap of construction and repair. The AUGER weights from 300 to 500 pounds, will drill a perpendicular or inclined hole FOUR INCHES IN DIAMETER, at the rate of from 8 to 16 feet per day in ordinary lime stone. It has drilled 2 feet in one hour.

For rights to use for Counties or States, apply to the Patentee. WILLIAM F. ASH,
May 20, 3* Springfield, Ohio.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to
WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transport, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York,

And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

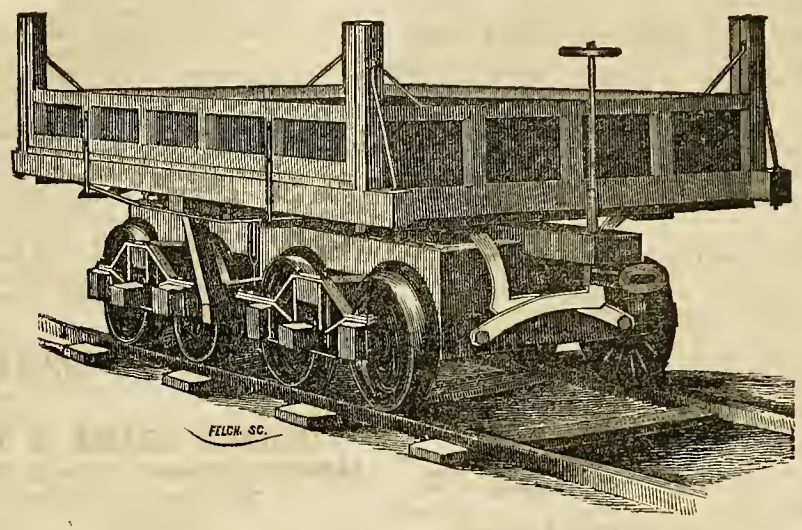
BAILEY'S PATENT DUMPING CAR.

Fig. 1.



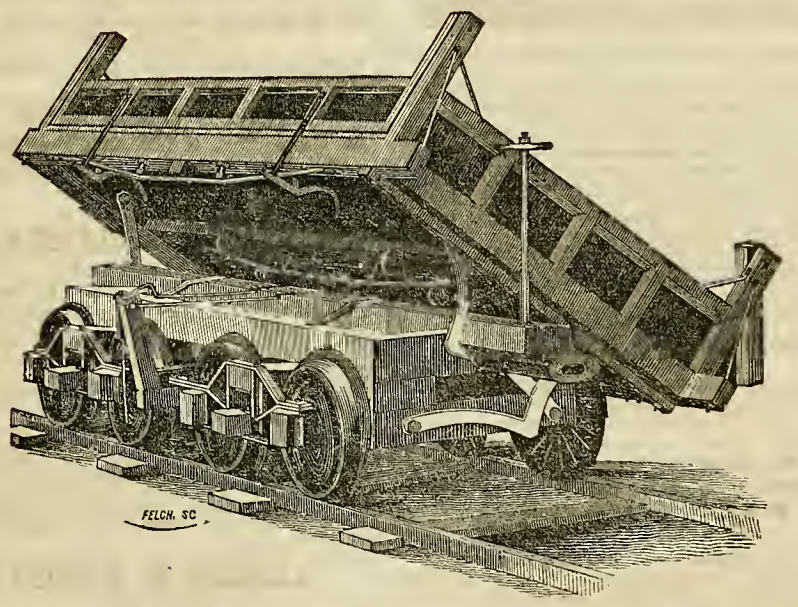


Fig 2.

The above engravings are views of a most important improvement in Railroad Dumping Cars. A patent was granted to C. P. Bailey for the improvement, January 24th, 1854.

Fig. 1 is a view of the car ready to receive the load.

Fig. 2 when dumped, or the load discharged.

This improvement has been in use on the Central Ohio Railroad for several months; also, on the Cincinnati, Hamilton & Dayton; Cleveland, Zanesville & Cincinnati; Cleveland & Columbus; and other Railroads in this state. Also upon the Illinois Central, in Illinois.

The improvement consists mainly, in the adoption of the Wrought Iron Transverse Bars, instead of the Cast Iron Rockers, generally in use. There are, however, other details of importance.

The box or body of the car rests on the ends of the Transverse Bars, whose other and lower ends are attached to the frame of the truck; two of the (wrought iron) bars are used at each end of the cars, to support and operate as guides in dumping the car. This improvement can be applied equally as well to the four-wheeled as to the eight-wheeled car.

One man will dump this car with ease when loaded, in less time than ten men can dump the rocker car, (the long or eight wheeled car is alluded to.) Contractors who have been using it, state that in graveling roads, **it is a saving of two cents per yard,** over the rocker car—that it is a much safer and easier car to manage, preferring it to any other car now in use for similar purposes.

Its liability to get out of repair is not one-tenth that of the Rocker Car. It is also well calculated for carrying and unloading Coal, Lime, Plaster, and all such materials as are carried in Dumping Cars—giving greater inclination in dumping, and discharging the load with greater facility than any other car.

The attention of Railroad Companies wanting Gravel Cars, as well as Coal Cars, is respectfully solicited to this improvement. The cost of this car does not exceed that of the Rocker Car,

To Railroad Companies and Car Builders who wish to purchase Rights, or wish information on the subject, letters addressed to me at Columbus, Ohio, will receive immediate attention.

GEO. L. CHASE.

Columbus, Ohio, June, 1854. Sole Agent for the United States.

TESTIMONIALS.

Engineer's Office, C. O. R. R.
Zanesville, Ohio, Nov. 21st, 1853.

Charles P. Bailey, Esq.,

Dear Sir:—At your request, some two months since, I caused to be placed on this road two of your newly invented Gravel or Dumping Cars. From what I have seen of their work I am clearly of the opinion that they will soon supercede all others of the kind now in use.

We have had the long car filled to its utmost capacity with the various kinds of excavation, and placed it in every position and one man would dump it with ease in ten seconds, while eas. with the ordinary Rocker Car, it takes a person one minute to perform the same labor.

The Car is simple in construction—not liable to get out of repair, as there is but little cast-iron about it. It tips to a greater angle than the ordinary car, therefore leaving its load in a better shape. I have no hesitation in saying that when more cars of the kind are wanted on this road they will be built after your model.

Wishing you every success in your undertaking, I remain, with great respect,

Yours, &c.,
GEO. T. CLARKE,
Chief Engineer.

I have purchased for the use of this company, two Gravel Cars, built after the plan of Mr. Bailey, and fully agree in the opinion above expressed.

HENRY O. AMES,
Sup't Cin., Ham. & Dayton Railroad.

I fully agree in the statement made by the gentlemen in this letter, and may also state that they are the best Gravel Cars ever built, in my opinion.

DANIEL McLAREN.
Mast. Macninist Cin., Ham. & Dayton Railroad.

Zanesville, Dec. 21, 1853.

Charles P. Bailey, Esq.,

Dear Sir:—From an experience in using your Improved Dumping Car, we have no hesitation in saying that two cents per yard is saved, (in labor and time) by using your car instead of the present Rocker Car.

That the repairs incidental to your car are not one-tenth of what they are on the Rocker Car.

That it is much the most profitable car for contractors as well as the safest one for laborers to use, being easier to handle.

We consider it superior, in every respect, to all other cars of the kind now in use.

Yours, truly,
E. NEWCOMB,
C. BARRET.
Cont'rs for grav. East. Div. C. O. Railroad.

I have seen the car above referred to at work, upon the Eastern Division Central Ohio Railroad, and fully concur with the opinion of Messrs. Newcomb & Barret

E. B. DUVAL,
Mast. Machinist, Central Ohio Railroad.
Zanesville, December 21, 1853.

Zanesville, Dec. 22, 1853.

Mr. C. P. Bailey,

Dear Sir:—As you desire my opinion of your Improved Dump or Gravel Car, that has been in use for the last three months on the Central Ohio Railroad, I do not hesitate to recommend it as being the best plan for a Gravel or Dump Car I have ever seen. The bills for repairing Dump Cars, such as are now in general use, it is well known, constitute a serious item of expense. On this account alone, your plan deserves a preference over all others, as there is but little liability about your car to any such accidents as are constantly occurring to the others. It dumps to a greater angle, and one or two men can dump it in less time, and with greater ease than the ordinary Rocker is dumped by ten or twelve men.

It will give me pleasure to recommend it as superior to any improvement of the kind in use.

ROBERT MACLEOD.
Chief Engineer, P. M. & C. R. R.

At a meeting of the Ohio Association of Railroad Superintendents, held at Cincinnati, March 8, 1854, the Committee appointed to examine Bailey's Patent Dumping Car,

REPORT,

That they have examined the Car, and consider the improvement a valuable one; and would recommend to any members of the Association who may need Gravel Cars, to examine and test this Car, before purchasing elsewhere.

W. H. CLEMENT,
For the Committee.

Clev. Col. & Cin. and Clev. & Erie R. R.
Supt.'s Office, Cleveland, O., Apr. 24, 1854.

Mr. Charles P. Bailey,

Dear Sir:—Two of your Patent Dumping Gravel Cars have been used on the Cleveland, Columbus & Cincinnati Railroad for several weeks, and I am so well satisfied that they are better than any others, that I have just ordered thirty more of the same sort,

Respectfully,
L. TILTON,
Sup't

May 25-1* Cincinnati.

TYLER DAVIDSON & CO.,
Agents for the
BOSTON BELTING COMPANY.

India Rubber Machine Belting in any quantity, from 2 to 20 inches.

India Rubber Steam Packing;
Mixed do do 1-32 to ¼ inch thick.
Plain do do 1-32 to 1 inch thick.
Pure do do
Pipe and Manhole Rings, all sizes;
Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agents of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.
2d, They are a great deal cheaper.
3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations.—This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the coLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils,—10 casks, assorted weights n w in store.

Allen's Revolvers and Self-Cocking Fistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

WINSLOW'S PATENT COMPOUND RAIL.

THIS RAIL ,which is represented by the ubove, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are,—a saving in the wear and tear of Machinery—it saves to a great extent in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable. Being practically a continuous Rail for the entire length of the Road, without break at the ends of bars the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effect upon cars and machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at HANGING ROCK IRON WORKS, upon the Ohio River, and at MT. SAVAGE IRON WORKS, Maryland. Specimen of the Rail and patterns of same will be gladly shown, as well as all information in relation thereto, given by application to

MUSKINGUM WORKS,
ZANESVILLE, OHIO.

DOUGLASS, SMITH & CO.

WOULD respectfully call the attention of Railroad Companies to their establishment at Zanesville

They are prepared to execute orders, on short notice, for

Passenger Cars of the most superior description,

Second Class Passenger, Mail Express, and Baggage Cars; Freight, Cattle, four or eight wheeled Gravel Cars.

We manufacture a superior

CAR WHEEL,

Over 2500 of which are now running on the Central Ohio Railroad, and many of these have been in use on the road over two years, having in that time only three to crack, and two to be renewed in consequence of the wearing of the Chill. We have also commenced the manufacture of the celebrated

WASHBURN WHEEL,

And are prepared to furnish this wheel, with or without axles. Also, castings for Cars fitted to order at the shortest notice.

BOLLMAN'S PATENT IRON & WOOD BRIDGE.

We are also agents and builders of the above celebrated Bridge. Are now placing upon the piers an iron bridge on this plan over the Muskingum river at Zanesville. We are ready to contract with companies for the construction of this Bridge. All orders addressed

DOUGLASS, SMITH & CO.,
au4tf. Muskingum Works, Zanesville, O.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Resevoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,
PRINCIPAL AGENT,

At 3.30 P. M., for Hamilton, Richmond, Indianapolis, Terre Haute, Lafayette and Chicago.

Sixth Train

At 5 P. M., for Dayton, Troy and Piqua, and intermediate stations.

Seventh Train

At 6.30 P. M., for Hamilton and intermediate stations.

The 1st Train, Express,

Will stop only at Hamilton and Middletown.

2d, 3d, 4th, 5th and 6th Trains,

Will stop at all regular stations.

The Seventh Train

Will stop at all way and flag stations.

The 1st Train

Will connect at Crestline at 1 P. M., with the Ohio and Pennsylvania Train for Pittsburgh, Philadelphia, Baltimore, etc., forming a direct and continuous line for each of these cities. Cars run through to Crestline without change. Baggage checked to Pittsburgh.

2d Train

Will connect at Richmond at 9.05 A. M., with Train of Indiana Central Road for Indianapolis; arrive at that place at 12 M., thence to Terre Haute, Lafayette, or Chicago without detention. Time as short as by any other route.

3d Train

Will connect at Dayton at 10.45 A. M., with Mad River Train to Sandusky; thence by Toledo and Cleveland Road to Cleveland; thence, a. 7 P. M., with splendid steamers **St. Lawrence** and **Mississippi**, to Buffalo; thence at 7.30 A. M., with Buffalo and N. Y. City Road, to New York; arriving at that place at 10 P. M., also at Crestline 4.20 P. M., with Ohio and Penna. Train for Pittsburgh, Philadelphia, Baltimore and Washington.

The Same Train

Will also connect at Clyde with Cleveland and Toledo Train to Toledo, Chicago and intermediate points; and at Sandusky at 5 P. M., with steamer **Bay City**, for Detroit.

Fifth Train

Will connect at Richmond at 6.40 P. M., with Indiana Central Train for Indianapolis, Terre Haute, Lafayette, etc.

Sixth Train

Will connect at Dayton with Dayton and Michigan Railroad to Troy, Piqua, etc.

ST JOHNSBURY, VT.

TESTIMONIALS:

OFFICE OF THE G. & C. U. RAILROAD CO.,
CHICAGO, FEB. 20TH, 1854.

MESSRS. E. & T. FAIRBANKS & Co.,

GENTLEMEN:—All of the principal station buildings on this road are furnished with your Depot and Platform Scales, with the exceptions of two scales. Your Scales were adopted after trial with those of other makers, and I take pleasure in now saying, that after more than four years trial, they have given entire satisfaction to us, and the public doing business with the Company.

I am not aware of a dollar's expense being incurred from wear or defect of materials in any part of the scales. The Track Scale, with suspended platform, which you have recently put into our principal depot at this place, judging from present appearance and the use to which it has been put, will, I doubt not, answer the purpose desired, and be equally satisfactory.

JOHN B. TURNER,
Pres't and Sup't.

CENTRAL RAILROAD CO.,
SAVANNAH, JAN. 6TH, 1853.

MESSRS. E. & T. FAIRBANKS & Co.,
St. Johnsbury, Vt.

DEAR SIRS:—Your Scales, which we have used for many years, gave so much satisfaction, that we ordered from your House, all the Scales necessary for our large new Warehouse. Your agent has just finished putting up twenty-two of your No. 1 and No. 2 Depot Scales and a large Road Scale, and I am pleased with the manner in which the job has been done. I trust and believe that this work will do credit to your establishment.

Respectfully, your obedient servant,
R. R. CUYLER, Pres't.

PORT RICHMOND, PA. MARCH 2D, 1852.

MESSRS. E. & T. FAIRBANKS & Co.,
St. Johnsbury, Vt.,

GENTLEMEN:—There are now in the Richmond Wharves at the terminus of the Reading Railroad, Twenty-six of your ten ton Track Scales, which have been in constant use for more than six years. The least quantity of Coal weighed annually upon any one wharf has been 400,000 tons. The aggregate quantity weighed upon the twenty-six scales, has been more than one million two hundred thousand tons per annum.

During the time since they have been in use, they have always retained their adjustment without any expense for repairs. They have been tested every year by the Sealer of Weights for the county of Philadelphia, and always found correct, and at the present time their operation is apparently as perfect and as sensitive as when first built.

JOHN E. HOBERT,
Superintendent of Wharves.

STATE OF NEW YORK,
CANAL COMMISSIONERS OFFICE,
ALBANY, JUNE 21, 1852.

MESSRS. E. & T. FAIRBANKS & Co.,

GENTLEMEN:—Your favor of the 10th, asking my views of the Weigh Lock Scales, manufactured by you, and introduced upon the Erie Canal, is received.

I have no hesitation in saying, that they have fully answered your recommendation in every particular. Their capacity for strength is fully equal to sustain the required burthen. They are not liable to get out of adjustment or repair. The arrangement of the Weighing Beam is admirably adapted to obtain rapid results. I know of no Scale superior to them, in this or any other country.

In great haste, Yours truly,
JOHN C. MATHER,
Canal Commissioner.

PORTABLE SCALES.

The following Railroads have been furnished exclusively, or nearly so, with FAIRBANKS' SCALES:

OUR RAILROAD MAP---NEW EDITION.

We have now ready a new and revised edition of our Railroad Map, containing corrections and additions from reliable sources, making it as reliable as it is possible to make such a map.

We are prepared to print maps for Railroad Companies to illustrate their reports, either from the stone as it now is, or make any alterations to suit parties. Railroad Companies will find this much more economical than getting up maps especially for their roads.

Price of maps as follows:

Plain, sized,	40 cents.
Colored in outline,	50 "
Colored in States,	75 "

A liberal discount where a number are taken.

RAILROAD EARNINGS FOR THE MONTHS OF MAY, 1853-4, COMPARED.

It has been our custom for some time past to give regular monthly statements of the earnings of all the railroads of the United States, as far as we could procure them. We consider these tables very valuable, giving, as they do, a true index to the business of the roads, if not of their profits; and at the same time showing the influence of railroads in developing the commerce of the country, the more especially in the West, where portions of country heretofore doing but a limited business, and that dependent upon uncertain and tedious wagon transportation, have now become heavy shipping communities, freighting car-load after car-load of produce for distant markets; and nowhere, in the statistics of the country, can this change be more readily traced than in the regular monthly returns of Earnings of the various railroads.

Notwithstanding the long continued pressure in the money market, and the recent extreme difficulty in negotiating railroad securities, the exhibit of Railroad Earnings for May, 1354, as compared with those of the same month of 1853, shows a very heavy increase, amounting, in the aggregate, to 79.9 per cent. per mile upon the roads enumerated; and this amount, large as it is, would have been still further augmented, could we have obtained returns from several other of our prominent Western roads, whose operations for the last month have been very heavy.

From the table herewith given, we find that—

Nine Eastern roads, 1896 miles, have increased over last year	332.16	per cent
Or, per mile	17. 5	" "
Twelve Western roads, 1843 miles, have increased over last year	1150.24	" "
Or, per mile,	62.4	" "

Being an increase of business upon the Western roads of 44.9 per cent. per mile greater than upon the Eastern roads.

In comparing this table with those for February, March and April last, as found in the Record, we note the gratifying fact that there is a continued and steady augmentation of the rate per cent. of the annual increase of Earnings upon Eastern, as well as Western roads, an indisputable indication of the growing prosperity of the railroad interests of the country.

Some of the Western roads show a very heavy increase, which, unless explained, would lead to erroneous conclusions. Thus the in-

crease upon the Chicago and Rock Island road is accounted for by the fact that in May, 1853, it was open and running only to Lasalle, 40 miles.

The Galena and Chicago Union, in the same month, was open only 92 miles.

The Milwaukee and Mississippi road in May, 1853, was open only to Janesville, 70 miles.

The Cleveland and Toledo road had but one of its divisions, the Southern, open 112 miles.

But, this heavy increase upon the completion or extension of these several lines is a still stronger evidence of the business that will concentrate upon them when completed, and making the necessary connections.

We were struck by the fact that there had been but little, or no increase in the Earnings of the New York city street railroad, from which, it would seem, not that they do not pay, but rather that they had reached the maximum of their business, for the present, at least.

From the table, as a whole, we feel that the railroad community has no reason to be discouraged, though some of the contemplated undertakings have been temporarily suspended. While railroads can show such monthly receipts, and constantly increasing, there is little fear that they will be abandoned by capitalists. The money is in the country and can be had. The plan adopted by many of the new roads of *home* subscriptions to an amount at least sufficient to grade and complete them ready for the iron and rolling stock, is a good one, and will eventually be adopted by every new line. This is as it should be; the lands along the line of the road are more benefitted by it than anything else, and should pay for its construction.

Boston, Concord & Montreal,	93	20,748 30	14,513 11	6,235 19	42.27

North Carolina Railroad.—Sufficient stock, it is stated, has been subscribed, under the act incorporating the North Carolina Railroad, to secure the charter. The sum of $501,300 has been subscribed in the books at Newbern, and 5 per cent. in eash paid in. The magistrates of the county of Craven, have authorized a subscription of $150,000.

Louisville & Nashville Railroad.—The stockholders of this road have been in session several days, discussing the affairs of the company. The Board of Directors and President have tendered their resignations, which had not been acted upon at last reports; the convention then being in its fourth day, and still continuing.

Railroads.

FRANKLIN AND WARREN RAILROAD.

This line is sometimes called the "Dayton Broad Gauge," though why so called we can not see, inasmuch as the Directors have not yet decided what the gauge is to be, leaving that to be decided by circumstances, such as connections, and the best lights of experience.

The work upon the line is progressing finely; notwithstanding the hard times in the money market the usual number of hands are kept at work, the available means of the Company coming from *local* subscriptions entirely.—There is already a cash subscription to the amount of $10,000 per mile, suffieient to grade and bridge the entire line, some 240 miles. The work is rapidly progressing throughout the entire line, exeept at the extreme eastern end. From Warren to the Pennsylvania state line, the route is not yet located. A new survey is being made between Warren, O., and Franklin, Pa., via Greenville, in the latter state. Should this new survey be adopted, the Meadville branch, and the Venango road will both intersect this line at or near Greenville. The best line, in its conneetions, will be adopted.

In one of our recent numbers we gave the route of this line. We are now pleased to be able to announce that the road will progress to completion despite the pressure in the money market, the means having been secured beforehand. We would that we could say the same of numerous other reeent undertakings, some of which, by depending upon the sale of bonds, have been compelled to suspend operations. This Company has not yet issued any bonds.

Under the efficient management of Mr. Kent, the President, and Mr. Kneass, the Engineer-in-Chief, it will be pushed to an early completion.

Independence, Va., Railroad.—This line of road is intended to connect Marietta, Ohio, with some point on the Northwestern Railroad, in Virginia, between Parkersburgh and its junction with the Baltimore & Ohio road, avoiding Parkersburgh entirely. The explorations have been carried on by a competent eorps of engineers under charge of W. W. Graves, as chief. The office of the Company is at Williamstown, in Va., directly opposite Marietta. The Marietta *Intelligencer* says:

"We learn that by one of the lines surveyed the Northwestern Virginia Railroad may be reached in 19 miles from Marietta. But the line which we understand the engineers consider the most direct connecting link between the East and West, strikes the Northwestern road at Williamson's 28 miles from Marietta. The interseeting point 39 1-6 miles from Parkersburgh. Beside the saving of 11 1-6 miles in distance, we understand

the grades and curves are highly favorable, and that there are six tunnels less between here and Williamson's than between Parkersburgh and Williamson's."

CENTRAL OHIO RAILROAD.

From the Baltimore American we take the following report of Mr. Bollman, who was selected by the Baltimore and Ohio Railroad Company, at the request of Mr. Sullivan, President of the Central Ohio road, to examine its present state, and its prospect of completion, etc. From the report it will be seen that the road is being rapidly completed; and that by September next, will be in full connection with the Baltimore and Ohio route.

Mr. Bollman says:

Of the unfinished portion of the road between the Ohio river and Cambridge, a large part of the road bed, in detatched sections is now ready for the track. The tunnels, of which there are four, are all completed, well formed and in good condition, except the one at Cambridge, which, although in use, is not entirely finished.

All the tunnels, all the bridge masonry, and a large portion of the grading between Cambridge and the Ohio river, a distance of 51 miles, are made for a double track.

Sections 47 and 63, expected to be the last finished, can be done by the latter part of August next. Sections 48, 51 and 59 would require about two months' labor. Besides these there are twelve other sections that would require from three to five weeks' work to complete. The remainder of the 51 miles is now ready for the track, and the track layers are placing about a half a mile per day from Cambridge east He understands that the laying of the track was also begun at the Ohio river end of the line on the 6th inst.

The engineering characteristics of the line are reported very favorable for the economical transport of freights, and high speed of passenger trains, the gradients and curvature being much lighter than most of the great lines of the country. A speed of 35 miles an hour can be readily maintained by express trains with safety and regularity.

"The work upon the whole line of the road between Columbus and the Ohio river is of excellent character. Upon the finished part, between Columbus and Zanesville, the condition of the track can not be improved. The masonry upon the whole line is of very uniform excellence, and not surpassed by that of any road. The Muskingum river is crossed by a double-track iron bridge, 528 feet long—four spans. The bridge across Salt Creek is also an iron one. The remainder of the bridges, built and building, are Howe's Patent, and show good materials and good workmanship. The rail being used the heavy T. pattern, laid on large crossties, which are placed 30 inches apart, measuring between centers; and laid on gravel ballast of 18 inches depth. In fact the whole work, of every nature, is of a substantial character, of excellent materials, and will compare favorably with that of any of the first-class roads of the country."

"A very important feature for the safety of travel, and such as will admit of great regularity and speed of trains, is the fact that nearly the whole line of the road is already fenced up, and provision is gradually being made for fencing the balance. Indeed, with occasional exceptions, the road runs through a succession of enclosed farms in a high state of cultivation."

For a distance of 80 miles, bituminous coal is found at convenient intervals along the line. At Bellevue, on the Ohio river, within a few yards of the site for the Company's engine-houses, the coal mines are now being successfully worked. From this point, for ten miles west, the coal crops out continuously, on the hillsides along the line of the road, and can be conveniently and cheaply mined. Three miles west of Brownsville, again, a rich vein is cut through by excavation for the road-bed. Near Cambridge, also, the very best quality of coal for cooking is found immediately on the line of the road; and at Zanesville, where almost the only kind of fuel used for domestic purposes, is coal dug from the surrounding hills, mines are now being worked for railroad transport to Columbus and the towns and cities west. With the exception, therefore, of having to transport to Columbus what may be needed for the engines fitting out at that station, this road possesses advantages over all others in regard to the quantity and quality of the coal beds through which the line passes, and the exceedingly low price at which the Company can obtain it delivered at any point on their line of road; cost in no case exceeding 75 cents to $1 per ton."

The equipment of the road, (one-third of which is already in use) will be 36 large engines and about 875 cars, costing about $840,000—equal to $6,176 per mile, or more than the average upon the leading roads of the United States. The capacity of this machinery to move freights and passengers will be, daily, as follows:

Freight	2640 tons.
Passengers	800 "

The crossing of the Ohio will be by a steam ferry-boat built with sufficient capacity to carry across a whole passenger train, or half a freight train, reaching the river by a grade that will admit of the using of locomotive power, and avoiding stationary machinery entirely. At the point selected for crossing no difficulty will occur to prevent its use at any stage of water, except extreme floods—the plan admitting of a range from the lowest stage to 36 feet rise.

"In conclusion, therefore," Mr. Bollman remarks, "as the result of diligent inquiry and close observation, my decided opinion is, that if the Company can command means as fast as required, and the work yet to be done, be prosecuted with the vigor that marks the present endeavors of those engaged upon it, the road can not fail to be completed and ready for business by the first week of September next; and I am convinced that there is a spirit of determination on all hands to have it finished by that time. In its engineering, workmanship, materials and equipment, the Central Ohio road is unsurpassed; and when complete it can not fail to accomplish all that has ever been claimed for it by its most sanguine friends."

WARSAW & ROCKFORD RAILROAD.—P. A. Whittaker has been elected Secretary, and Lemuel Andrews Treasurer of this Company. Both gentlemen are residents of Rock Island, to which place their several offices have been removed. The office of the Engineer still remains at Warsaw.

FORT WAYNE & SOUTHERN RAILROAD.

We have received a copy of the "Exhibit," etc., of this company, from which we make the following resume:

The officers of the company are—W. J. Holman, President; D. T. Harris, Secretary; W. F. Jones, Treasurer.

Directors—Wm. Rockhill, Jno. Studibaker, Jacob Brugh, Charles Carter, E. T. Hickman, Jos. Holman, J. L. Robison, J. K. T. Gibson, Brannock Philips, E. G. English, Sam'l McCampbell, James G. Reed, W. J. Holman.

The line seems to be divided into three divisions. The first from Fort Wayne to Muncie; the second, from Muncie to Tripton, (late North Vernon); the third, from Tripton to Jeffersonville.

The estimates of the first division, 64.21 miles, are as follows:

Road complete			$747,514 24
Or, per mile			11,641 71
Gradients, as follows:			
Level	15 miles	2,900	feet.
10 feet per mile	7 "	1,740	"
10 to 20 feet per mile	16 "	3,770	"
20 to 23½ feet per mile, maximum	24 "	3,830	"
Total curvature	6 "	1,150	"
Minimum radius		5,730	"
Maximum radius		9,375	"
Second Division—			
Length Surveyed	23 miles	1,960	feet.
Switches	3 "		
Straight Line	80 "	4,920	"
Curved	2 "	2,320	"
Total cost			$1,091,198 07
Or, per mile			13,244 68
Maximum grade		40 feet to the mile.	
Third, or Southern Division—			
Length			51.42 miles.
Side Track		2	"
Total cost			$957,724 00
Or, per mile			18,270 00
Straight Line		44.18	miles.
Grade, maximum		40	feet.

The proposed connection with Louisville is by Tunnel, under the Ohio River, estimated to cost, $1,073,817. Total cost of road, tunnel, equipments, &c., complete, $5,500.000 00, or, for 202½ miles, per mile, $27,161 00.—Stock has been subscribed to the amount of $1,324,715 00.

Large subscriptions have been made in Real Estate, which has been mortgaged by the company as a basis for the issue of bonds.

The exhibit contains a large amount of other matter relating to the company, which we have not room for.

CORRECTION—CINCINNATI, PERU AND CHICAGO RAILROAD.—In our notice of this road, in our last issue, a typographical error in regard to the amount of local subscription to the stock of this company, made us say seventy thousand instead of $700,000—quite a difference.

STEUBENVILLE & INDIANA RAILROAD.—On Monday, 12th inst., this road was opened from Steubenville to Cadiz, on which occasion there was a grand celebration at the latter place.

☞ The Galena and Chicago Union Railroad Company have just purchased, in the latter city, wharfage on the lake, with a front of a thousand feet, for which they paid the sum of $300,000.

Communications.

THE PUBLIC WORKS OF NORTH CAROLINA.

We are indebted to E. W. Serrell, Civil Engineer, for the following communication upon the Public Works of the state of North Carolina. We are pleased to learn that this state which has remained so long quiescent, is now awakening to a proper appreciation of its position among the states of the Union, and is availing itself of the means of developing its productions by connecting its inland country with the sea coast and the neighboring states by means of railroads.

We trust that this is no mere spasmodic effort to be arrested at the first financial check, but rather the commencement of a series of Internal Improvements within its borders which will be continued until its heretofore dormant wealth, shall be fully developed, and North Carolina shall rank second to but few of its sister states in commercial prosperity.

We shall be much obliged to Mr. Serrell for the information spoken of in his letter, when ready.

For the Railroad Record.

North Carolina is rousing in earnest to the importance of her position, a strong and permanent desire has taken root in the minds of the people of this state in favor of internal improvements, which nothing now can check.

A system of railroads has been planned which, when complete, will place the state again in its former proud position, relatively to its sisters in the great constellation.

The energies of North Carolina have for many years slumbered; in fact they have been almost dormant—but within a recent period a change has taken place which bids fair to rival the strides of the most favored portions of the West.

Within the last two years some three hundred and fifty miles of railroad have been commenced upon, and ample provision is being made to prosecute these undertakings to completion.

Among the most prominent lines of railway now claiming public attention, is that from the coal fields on Deep River to Fayetteville, thence to Beaufort Harbor, known as the North Carolina Western Railroad and Branch, and the Atlantic Railroad, which is to run from the present terminus of the North Carolina Central Railroad at Goldsboro to Beaufort Harbor.

These railroads will collectively be about two hundred miles in length.

The first, extending from the coal fields to Fayetteville, thence, via Onslow to Beaufort Harbor, is already under contract and the contractors are vigorously at work on the portion west of Fayetteville.

The line from Goldsboro to Beaufort Harbor is in the hands of a company who have their hooks of subscription opened by Commissioners, and have received such encouragement in the way of subscriptions, that they have determined to organize the company on the 15th July next.

Another important line has been suggested and measures are now on foot to determine its desireableness, namely, from Fayetteville to Charleston, South Carolina.

This line is for the purpose of reaching the Great bituminous Coal Basin of the Deep River, and by the Western Railroad, now being built, to place Charleston in a better position as a Naval depot.

By reference to the reports of the superintendent of the Coast Survey, it will be seen that it is there stated, that Beaufort is the best harbor on the coast south of Norfolk, and north of Rio de Janeiro. At this time North Carolina has no harbor within the state connected with the interior of over ten feet depth of water.

Wilmington, at the mouth of the Cape Fear river, has only ten feet of water at the bar. The general Government has spent vast sums here for deepening and improving, but with little or no effect.

The commerce of the world (since the great improvements in ocean navigation, made within the past ten years,) requires harbors of greater depth than formerly. Beaufort has twenty-four feet on the bar and is accessible at all times, hence its importance. Heretofore unconnected with the interior it has not been of much use; no navigable rivers lead from it into the rich country surrounding it, but time will soon substitute the iron road.—Already a town has been laid out on a more favorable site than that occupied by the fishermens' village of the same name as the Harbor, and it is intended to terminate the Atlantic and the Western railroads at it. Carolina City is the name of the new metropolis.

In speaking of this site, at the Southern Conventiou, Lieut. Maury, who, it is well known, has as clear an appreciatiou of the importance of the subject as any man, remarked "that although Charleston might sneer at the insignificance of the place, as compared with itself, it was his deliberate opinion, that within fifteen years it would have enough to do to keep pace with its rival."

North Carolina is not alone interested in what she is doing. All the West and Northwest will be directly benefitted.

The extension of the Central railroad into Tennesse will give another outlet from the Mississippi. Ohio and Kentucky are greatly to be benefitted by this plan. All the South American and West India trade of this part of the country, will, when the railroads referred to are completed, pass most advantageously over them to and from Beaufort.

The line over the mountains in the western part of the state connecting the central and the western roads of North Carolina with Knoxville, has already been surveyed, and it is confidently anticipated that at the coming session of the Legislature provision will be made for its construction.

At some other time it is proposed to discuss the merits of these enterprises in a commercial view, in detail—they are worthy of the most serious consideration.

TRACK LAYING.

We commend the following to the serious consideration of Railroad officers, contractors and others. The idea presented by our correspondent is very plausible, and is doubtless worthy of the serious attention of parties interested:

Editor Railroad Record: Sir—After considerable observation, and experience in the construction, etc., of railroads, I am forcibly impressed with the fact that an enormous amount of iron is annually and needlessly destroyed, by running the heavy engines now in use, over a cross-tie track. I have no hesitation in saying that the amount of repairs required, and the destruction of iron on a cross-tie track is at least 20 per cent more than it would be on a track of a continuous bearing.

On the best constructed cross-tie roads it is impossible to keep the track in perfect order. Water accumulates and settles abont the tie, and as soon as the engine comes on it mud is thrown out from underneath which of course leaves a vacancy, and constantly gets worse.

This occurs more especially with joint ties, where its effects are most disastrous. Every one connected with railroads knows to a certain extent the damage that is produced by this settling of the joints, how the locomotive in falling half an inch or more, pounds and bruises the ends of the rails; bends the bars, draws and breaks off the heads of spikes, etc.,

If on a level track the joint tie sinks only half an inch, the engine at that point has to overcome a grade of about 88 feet per mile, and as the engine pitches on to the end of the rails at this point the speedy destruction of rails is unavoidable.

Compound rails have been invented, but they can not totally remedy the defect, because any tie is liable to settle, whether at a joint or in the middle of a bar, and wherever such settling takes place there must be an undue pressure and strain upon the rail.

The common ∩ or T rail is the best rail, and whatever improvement is made for the securing a track as permanent as possible, and at the same time, an economical one, must be done at the foundation.

If we lay a track on longitudinal sills, from 20 to 30 feet long, 12×10, with the broad surface down, braced at every ten feet by a brace

6X4, dovetailed in on top of, and clear across the stringer, (sill), and pinned, and let the chairs in flush with the timber to prevent the ends of the rails from bruising the sills, and break joints with the rails at least five feet from the joint of the sills, then with 6 or 10 inches of gravel (ballast) under the sills, and the sill bedded to its top surface allowing the gravel to slope off, so that water falling outside of the sill may pass off down the bank, and that falling between the track draw to the center and pass off underneath the ballasting, we shall have I think about as good a track as is required, and at an expense of not more than $1,000 per mile over the cost of a cross-tie track. A sum which I have no hesitation in saying would be saved in repairs of road, wear and tear of rolling stock, etc., in less than one year.

I am sir, with much respect,
Your obedient servant,
C. Engineer.

Gibson House, Cincinnati, June 16, 1854.

From the Philosoph. Magazine, April, 1854.

ON THE SPHEROIDAL STATE OF WATER IN STEAM-BOILERS.

BY A. NORMANDY, ESQ.,

To Dr. Tyndall, F. R. S., &c.—Convinced as I am that water frequently assumes the spheroidal state in boilers, in consequence of which these most important vessels, on which the very existence of the steam engine, that is, of most of the comforts of civilized life, depend, are too often converted by mismanagement or ignorance into frightful engines of death and destruction, I venture now to trouble you with a few observations in addition to those which you were kind enough to listen to the other day, in the hope that, should the facts which I am about to relate appear to you as conclusive as they do to me, you may be induced, in your lectures on heat, to call once more the attention of the audience, should you deem fit to do so, to this, I believe, fruitful but almost unsuspected, or at any rate, scarcely credited source of explosion.

I have already had the honor to relate to you that I had seen the plates of a Cornish boiler, a quarter of an inch thick, become red hot in the flue, although at the time the boiler contained its due quantity of water. It was a new boiler, about 18 feet long; and that the water had assumed therein the spheroidal state is proved by the fact, that a lead rivet, 1 inch in diameter, put in for safety, was actually melted. It is, in fact, this rivet which led to the detection of the cause of the occurrence, and an investigation of the subject brought out the following details. The fireman or stoker was an ignorant mulatto, who having noticed the lead rivet in the boiler, had given it as his opinion that it would soon be melted by the fire; the possibility of such an accident having been denied by one of his fellow workmen, a bet had taken place between them.—The wager having thus been laid, the fireman set to keeping up a brisk, bright fire; in consequence of which, steam being generated exceedingly fast, *priming*, that is a production of steam under the superincumbent water, took place, and, as a matter of course, the water, or a portion thereof, not being any longer in contact with the surface of the iron plate, the latter in a very short time became red hot, and *the rivet melted;* for sometime afterwards, however, the water being in the spheroidal state, the boiler remained apparently sound, that is, it did not leak, although it had an opening of an inch diameter left in consequence of the melting of the rivet; it was only shortly afterwards I was told, that the heat having diminished, torrents of water poured through the hole with almost explosive violence, emitting volumes of scalding steam as it came in contact with the fire on the grate.

This took place at the Wenlock Timber Saw-mills; and I can bear testimony to the above fact, and likewise to this circumstance, that when filled as usual with its normal quantity of water, the bottom of the boiler over the fire could, in the course of five or six minutes, be made red-hot at pleasure by brisk firing. In fact, having called at the above works, according to appointment, to meet the engineer there, my inquiry as to the then state of the boiler was answered by the foreman, in presence of his master, in these words:—"*The boiler is not red hot now, but if you will step this way it will be so immediately;*" and in spite of all remonstrance as to the danger of such an experiment, he came shortly afterwards to announce that the boiler was red-hot, and *I saw it* in that state in presence of the engineer, the master, his nephew, the foreman, and the fireman or stoker. The production of steam had thereby been spontaneously reduced, the bolt or lead rivet eventually melted, but not in my presence; for seeing the state of things I speedily retreated with the engineer and master, but almost reluctantly followed by the foreman, in whose somewhat jeering looks I could plainly read that he entertained but a poor idea of our pluck.

In addition to this, I may say that in "wagon boilers," a shape than which none can be more unsafe, but which is now fortunately much less in use than in former years, bulging bumps are very often observed, which are certainly due to the pressure of the steam in the boiler upon the iron plates of the bottom, when by extravagant or incautious firing they have been made red-hot. Frequently, however, instead of bulgings or bumps being thus produced, a disruption of the boiler takes place, attended with more or less fatal consequences. Many such accidents have thus happened at Manches[illegible], particularly on Monday mornings.

Franklin Canal Company Railroad, Pa.—At a meeting of the stockholders of the Franklin Canal Company below Erie, last Monday, 19th inst., that Road was formally transferred to the Cleveland, Painesville and Ashtabula Railroad Company, coupled with an agreement to place the stock at a valuation equal to that of the last named interest, or in lieu thereof to pay each shareholder dollar for dollar, with interest from the date of running operations. A resolution was also adopted accepting the Compromise Railroad bill without conditions, in imitation of the stockholders of the Cleveland, Painesville and Ashtabula Road, in a distinct capacity, at their meeting in Cleveland last Tuesday week.

Baton Rouge has subscribed $100,000 to a railroad connection with Jackson, Miss.

Ship-Building on the Clyde—Marine, Steam and Machinery Statistics.

We are indebted to an esteemed friend for several foreign journals, containing much valuable information in relation to ship-building on the Clyde, and principally between Glasgow and Ayr, inclusive. The figures are well calculated to surprise. The calculations are made from April 1853, to April 1854, and the total number of vessels built was 266, viz: 88 sailing vessels, 126 screw steamers, and 52 paddle steamers. The details may thus be stated:

BUILT DURING LAST YEAR.

	Number.	Tonnage.	Horse-power.
Sailing vessels,	37	3,070	
Screw do.	59	45,526	5,972
Paddle do.	12	15,518	6,139
Total,	123	64,114	12,111

Of these, thirteen were wood.

NOW BUILDING, OR ORDERED.

	Number.	Tonnage.	Horse-power.
Sailing vessels,	51	28,196	
Screw do	67	63,271	10,519
Paddle do	25	12,182	4,205
Total	132	103,656	14,724

Of these,, 18 were of wood.

AGGREGATE VESSELS BUILT, BEING BUILT, OR ORDERED.

	Number.	Tonnage.	Horse-power.
Sailing vessels,	88	32,266	
Screw do	126	108,804	16,491
Paddle do	52	27,700	19,334
Total,	266	167,700	26,835

Of the foregoing, two are intended for the Liverpool and Philadelphia Line.

The foregoing figures place the Clyde far above either London, Liverpool, or any port in the world, in this particular line. The trade is increasing too, as the following comparative view of the number of vessels building or ordered on the first of April of this and the previous year will show:

	1853.	1854.
Sailing vessels,	13	51
Screw do	51	67
Paddle do	16	25
Tonnage,	66,905	103,656
Horse-power,	15,135	14,724
Increase over previous year in vessels,		53
Increase over previous year in tonnage,		36,750

—*Pa. Inquirer.*

A Giant Steamship.—An enormous steamship is now in the course of construction at Millwall, England, for the Eastern Steam Navigation Company. She is to be launched and completed within two years. The extreme length of the main deck will be seven hundred and eighty feet, and the extreme length of keel six hundred and eighty-three feet; the depth of hold fifty-elght feet; the length of the principal saloon eighty feet. Tonnage 10,000, or builders' measurement 22,000. Her screw and paddle engines will be of the aggregate nominal power, 2,800 horse. She will also carry an immense quantity of sail. The principle of construction, as designed by Mr. Brunel, will be similar to that of the tube of the Britannia Bridge. Her bottom, deck and sides are to be doubled, and of a cellular form, with two feet six inches

between. She will have fourteen water-tight compartments, also two divisional bulkheads running her whole length. The *London Builder* says that the great length of the ship, according to all present experience, will enable her to pass through the water at a greater velocity, with a smaller power in proportion to her tonnage, than ordinary vessels now require to make ten knots an hour.

THE BALTIMORE AND OHIO RAILROAD.

Col. Lumsden, of the New Orleans *Picayune*, recently passed over this road, and in a letter to his paper he gives an account of the grand enterprise, from which we extract the following:

"No bolder conception, I fancy, than the construction of the Baltimore and Ohio Railroad has found a place in any man's mind during the present century, unless indeed, it be that of the Pacific road. But the idea of the Baltimore and Ohio road was originated twenty-seven years ago, when the internal improvements were not what they are now, and the company was the first chartered and fully organized railroad company in the United States for an extended line of road.

"The route of this road—three hundred and eighty miles—lies literally around, through, over and under immense mountains, and the entire capital so far expended in its construction and equipment is $22,000,000. Besides this immense sum, the city of Baltimore has just loaned the company, as you know, $5,000,000 more, with which they will make a double track of two hundred and fifty miles. Here is enterprise for you! Here is public spirit worthy the example of New Orleans!

"I have been hastily reading a brief but highly interesting history of this vast work, and find it there well said, that had the enterprising men who originated it imagined it would have cost anything approaching this vast amount, it can scarcely be supposed that they would have commenced it all.

"When, in 1827, the citizens of Baltimore resolved to apply to the Legislature of Maryland for a charter to build the road, its originators calculated the highest estimate of cost of construction at $5,000,000; the distance to the Ohio river at 260 miles—nearly one hundred miles short in this item; annual income from tolls $750,000, and the time to pass from Baltimore to Ohio sixty-two hours and a half.

"To see how vastly wide of the mark they reckoned, look at the actual cost of construction, which, as I have said, is $22,000,000; the distance is 380 miles; the income from tolls, for this year, will be nearly $4,000,000; while the time between the extreme points of the road, as printed in the schedules, is from seventeen to twenty hours.

"I learn, what has not been published, that the available "rolling stock" of the road is about as follows: 206 locomotives, 130 passenger cars, 1,200 coal cars, and 2,200 freight cars (eight wheeled) for general merchandise. With this equipment—the largest, doubtless, of any road in the Union—the company can take from the Ohio river into Baltimore 1,200 tons of freight daily, besides the increasing way trade, and 1,000 tons of coal from Cumberland and other coal depots. These are facts that the people of New Orleans ought to consider.

"There is probably no road in the country which can boast of more able and accomplished officers in every branch of its service, than the Baltimore and Ohio. The present efficient President, is Wm. G. Harrison, Esq.; John H. Done, Esq., is Master, and William P. Smith, Assistant Master of Transportation; Samuel J. Hays, Esq., Master of Machinery, and Wendell Bollman, Master of Road. The office of General Superintendent has been abolished.

"It was little after day-light when the train left Piedmont, and we soon commenced an ascent of seventeen miles to the Atlantic summit, by a grade, of which eleven miles is at the rate of one hundred and sixteen feet per mile. How magnificent the scene here presented! Nothing I had yet seen had at all equaled it.

"Altimont is 2,700 feet above tide water at Baltimore, and 1,806 feet above Piedmont; yet we ascended this long grade with ease at twenty miles per hour behind one of Denmead's ten-wheeled locomotives. This is the culumniating point of the line, and the great Back-bone mountain, now passed, towers up to the left, and is seen for miles at every opening in that direction.

"I might go on and multiply hundreds of other bold features of this vast road. I might make mention of a viaduct across the Monongahela river, 650 long and 39 feet above low water surface, the lofty and massive abutments of which support an iron superstructure of three arches of 200 feet span each, and which forms the largest bridge in this country. But I have said sufficient to prove to those who doubt the practicability of constructing railroads anywhere and under the most discouraging auspices, that, they can be built any and everywhere, and under any circumstances whatever—through the swamps of Louisiana and Mississippi, across rivers, and over and through the highest mountains—the Rocky mountains themselves. And remember, railroads not only pay for themselves, but build up towns and cities and keep them up. No city is a city without her railroads. No city can be one without them.

DAYTON & MICHIGAN RAILROAD.

We learn that the work upon this road, between Piqua and Sidney, under contract to Mr. Carey, has been suspended. The Dayton *Gazette* says:

"Mr. John W. Carey, who engaged to build the road from Piqua to a point four miles above Sidney, was to do the work for $189,000—one hundred thousand in real estate, $40,000 in bonds of the Bellefontaine and Indiana Railroad, and the remainder in certain stock subscriptions specified—all of which have been transferred to him or are at his disposal. He has expended $40,000 in prosecuting the work, and now, for reasons, into which it is not necessary for us to enter, declines to go on. The company have his bond in the sum of $300,000, with security, to make good his contract, in case his failure to go on is without excuse.

"The work north of Mr. Carey's job, to Toledo, is being prosecuted by Mr. Doolittle with a heavy force. In regard to the means of the company, we learn that there is not likely to be any embarrassment. The recent decision of the Supreme Court sustaining county and township subscriptions which were voted prior to the adoption of the new constitution, adds largely to the available resources of the company."

OBITUARY.

It is with feelings of deep regret that we announce the recent death of E. R. Stables, Esq., late Civil Engineer upon the line of the Cincinnati, Wilmington and Zanesville Railroad, at the early age of 24 years. He died at Circleville.

Mr. Stables was a native of Lancaster, England, and had practiced his profession upon some of the most prominent roads of that country. He was a man of marked ability in his profession; and was held in high estimation by those who knew him. He has contributed several valuable articles to the columns of the Record, upon subjects appertaining to his calling. Mr. Stables was a hard student, a close thinker, and a clear reasoner. His close application to study was one primary cause of his illness; he had been in this country only some four years, but in that short time, by diligence and ability in his profession, and gentlemanly deportment, he had won for himself a host of friends, as was practically evinced in the truly laudable care and attention bestowed upon his suffering and disconsolate widow, in the interval between his death and her departure for her early home, by those whom it would please us to name, did we feel at liberty to do so in this connection.

His loss will be felt by the company in whose employ he was, as well as sincerely mourned by a large circle of friends and acquaintances.

Indianapolis & Bellefontaine Railroad Company.—At the recent annual meeting of this company, the following Directors were elected, viz:

John Brough, Stillman Witt, James H. Godman, William A. Otis, Parker Handy, Robert Hilliard, David Kilgore, Samuel P. Anthony, Allen Makepeace, William Sparks, Samuel V. B. Noel, Daniel Yandes, Douglas Maguire, Alfred Harrison and Richard H. Winslow.

Mr. John Brough was chosen President Mr. James H. Godman, Vice-President, and Thomas H. Sharpe and Oscar F. Thompson were continued as Treasurer and Secretary.

The United States Navy.—The following figures comprise the officers of the line, with the amount of their salaries. Also the proposed retired list:

	At sea.	On leave of absence less than 6 months.	On leave over six months.	Retired. list.
15 Flag Officers,	$4000	$3000	$2500	$1700
55 Captains,	3500	2600	2000	1500
70 Commanders.	2500	1800	1650	1250
30 Lieut. Comd'g	2000	1600	1400	1000
300 Lieutenants,	1500	1200	1050	750
125 Masters,	1000	700	600	——
310 Midshipmen, same pay as now.				

The staff officers are to be, surgeons 75, assistant surgeons 85, chaplains 24, professors of mathematics 12.—*Penn. Inquirer.*

MONETARY.

Money is in active demand at the East; trade is dull, though there is no pressure in the mercantile community. Legal rates are fully maintained for call loans. "Number one" paper rates at 10@12 per cent., less known at higher rates.

Foreign Exchange is dull, and rates at 109¼@109½ per cent. for first names.

In the stock market, there is a downward tendency, until the principal stocks have reached lower prices than for years before.

The New York Canal loan of $1,000,000, has all been taken up at 116.50 to 120 00 per cent. This is pretty convincing evidence that there is no lack of money in the market.

At the West, the money market has been rather quiet; the demand has been restricted somewhat, and the usual July settlements will doubtless cause an increased stringency for a short time. The rates of interest remain about the same, from 1@2 per cent. per month, according to the standing of the parties.

The Stock Market is quiet, but few transactions taking place.

To Railroad Contractors, Quarry Men, &c.

THE attention of those interested is called to ASH'S IMPROVED HORSE POWER ROCK DRILL, for Railroad Excavation, Stone Quarrying, Well Boring &c.

This Drill is worked by HORSE POWER, requiring but one horse and one man, to keep it constantly at work, with great ease and velocity, performing 60 strokes per minute. It is cheap of construction and repair. The AUGER weights from 300 to 500 pounds, will drill a perpendicular or inclined hole FOUR INCHES IN DIAMETER, at the rate of from 8 to 16 feet per day in ordinary lime stone. It has drilled 2 feet in one hour.

For rights to use for Counties or States, apply to the Patentee. WILLIAM F. ASH,
May 20, 3* Springfield, Ohio.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to

WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York, And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

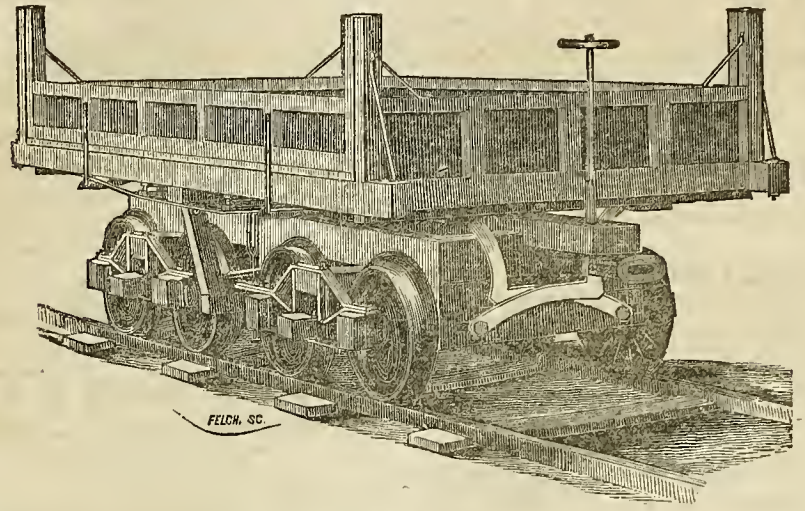
BAILEY'S PATENT DUMPING CAR.

Fig. 1.



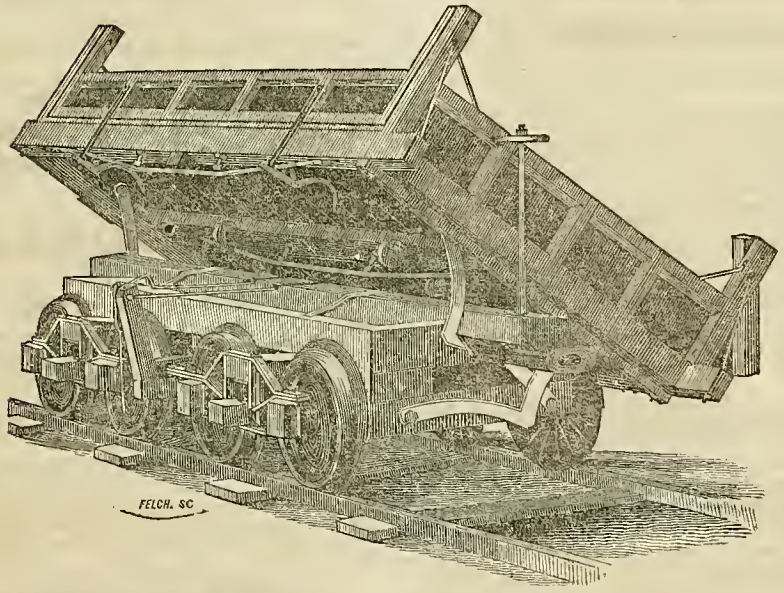


Fig 2.

The above engravings are views of a most important improvement in Railroad Dumping Cars. A patent was granted to C. P. Bailey for the improvement, January 24th, 1854.

Fig. 1 is a view of the car ready to receive the load.

Fig. 2 when dumped, or the load discharged.

This improvement has been in use on the Central Ohio Railroad for several months; also, on the Cincinnati, Hamilton & Dayton; Cleveland, Zanesville & Cincinnati; Cleveland & Columbus; and other Railroads in this state. Also upon the Illinois Central, in Illinois.

The improvement consists mainly, in the adoption of the Wrought Iron Transverse Bars, instead of the Cast Iron Rockers, generally in use. There are, however, other details of importance.

The box or body of the car rests on the ends of the Transverse Bars, whose other and lower ends are attached to the frame of the truck; two of the (wrought iron) bars are used at each end of the cars, to support and operate as guides in dumping the car. This improvement can be applied equally as well to the four-wheeled as to the eight-wheeled car.

One man will dump this car with ease when loaded, in less time than ten men can dump the rocker car, (the long or eight wheeled car is alluded to.) Contractors who have been using it, state that in graveling roads, **it is a saving of two cents per yard**, over the rocker car—that it is a much safer and easier car to manage, preferring it to any other car now in use for similar purposes.

Its liability to get out of repair is not one-tenth that of the Rocker Car. It is also well calculated for carrying and unloading Coal, Lime, Plaster, and all such materials as are carried in Dumping Cars—giving greater inclination in dumping, and discharging the load with greater facility than any other car.

The attention of Railroad Companies wanting Gravel Cars, as well as Coal Cars, is respectfully solicited to this improvement. The cost of this car does not exceed that of the Rocker Car,

To Railroad Companies and Car Builders who wish to purchase Rights, or wish information on the subject, letters addressed to me at Columbus, Ohio, will receive immediate attention.

GEO. L. CHASE.
Sole Agent for the United States.

Columbus, Ohio, June, 1854.

TESTIMONIALS.

Engineer's Office, C. O. R. R.
Zanesville, Ohio, Nov. 21st, 1853.

Charles P. Bailey, Esq.,

Dear Sir:—At your request, some two months since, I caused to be placed on this road two of your newly invented Gravel or Dumping Cars. From what I have seen of their work I am clearly of the opinion that they will soon supercede all others of the kind now in use

We have had the long car filled to its utmost capacity with the various kinds of excavation, and placed it in every position, and one man would dump it with ease in ten seconds, whereas, with the ordinary Rocker Car, it takes ten men one minute to perform the same labor.

The Car is simple in construction—not liable to get out of repair, as there is but little cast-iron about it. It tips to a greater angle than the ordinary car, therefore leaving its load in a better shape. I have no hesitation in saying that when more cars of the kind are wanted on this road they will be built after your model.

Wishing you every success in your undertaking, I remain, with great respect,

Yours, &c.,
GEO. T. CLARKE,
Chief Engineer.

I have purchased for the use of this company, two Gravel Cars, built after the plan of Mr. Bailey, and fully agree in the opinion above expressed.

HENRY O. AMES,
Sup't Cin., Ham. & Dayton Railroad.

I fully agree in the statement made by the gentlemen in this letter, and may also state that they are the best Gravel Cars ever built, in my opinion.

DANIEL McLAREN.
Mast. Machinist Cin., Ham. & Dayton Railroad.

Zanesville, Dec. 21, 1853.

Charles P. Bailey, Esq.,

Dear Sir:—From an experience in using your Improved Dumping Car, we have no hesitation in saying that two cents per yard is saved, (in labor and time) by using your car instead of the present Rocker Car.

That the repairs incidental to your car are not one-tenth of what they are on the Rocker Car.

That it is much the most profitable car for contractors as well as the safest one for laborers to use, being easier to handle.

We consider it superior, in every reapect, to all other cars of the kind now in use.

Yours, truly,
E. NEWCOMB,
C. BARRET.
Cont'rs for grav. East. Div. C. O Railroad.

I have seen the car above referred to at work, upon the Eastern Division Central Ohio Railroad, and fully concur with the opinion of Messrs. Newcomb & Barret

E. B. DUVAL,
Mast. Machinist, Central Ohio Railroad.
Zanesville, December 21, 1853.

Zanesville, Dec. 22, 1853.

Mr. C. P. Bailey,

Dear Sir:—As you desire my opinion of your Improved Dump or Gravel Car, that has been in use for the last three months on the Central Ohio Railroad, I do not hesitate to recommend it as being the best plan for a Gravel or Dump Car I have ever seen. The bills for repairing Dump Cars, such as are now in general use, it is well known, constitute a serious item of expense. On this account alone, your plan deserves a prefereuce over all others, as there is but little liability about your car to any such accidents as are constantly occurring to the others. It dumps to a greater angle, and one or two men can dump it in less time, and with greater ease than the ordinary Rocker is dumped by ten or twelve men.

It will give me pleasure to recommend it as superior to any improvement of the kind in use.

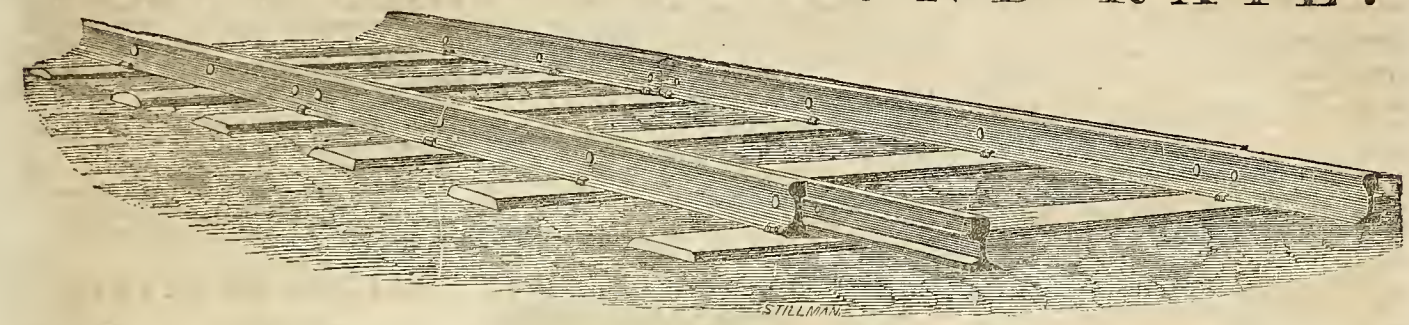
ROBERT MACLEOD.
Chief Engineer, P. M. & C. R. R.

At a meeting of the Ohio Association of Railroad Superintendents, held at Cincinnati, March 8, 1854, the Committee appointed to examine Bailey's Patent Dumping Car,

REPORT,

That they have examined the Car, and consider the improvement a valuable one: and would recommend to any members of the Association who may need Gravel Cars, to examine and test this Car, before purchasing elsewhere.

W. H. CLEMENT.
For the Committee.



Clev. Col. & Cin. and Clev. & Erie R. R.
Supt.'s Office, Cleveland, O., Apr. 24, 1854.

Mr. Charles P. Bailey,

Dear Sir:—Two of your Patent Dumping Gravel Cars have been used on the Cleveland, Columbus & Cincinnati Railroad for several weeks, and I am so well satisfied that they are better than any others, that I have just ordered thirty more of the same sort,

Respectfully,
L TILTON,
Super't.

WINSLOW'S
PATENT COMPOUND RAIL.

THIS RAIL, which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a

THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are—a saving in the wear and tear of Machinery—it saves, to a great extent, in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable. Being practically a continuous Rail for the entire length of the road, without break at the ends of bars, the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effects upon Cars and Machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at Hanging Rock Iron Works, upon the Ohio River, and at Mt. Savage Iron Works, Maryland. Specimens of the Rail and patterns of the same will be gladly shown, as well as information in relation thereto, given by application to

J. F. WINSLOW, Troy, New York.

Change of Time on Cincinnati, Hamilton, Eaton & Richmond Railroad.

ON and after TUESDAY, April 4th, 1854, the Morning Train for Richmond and Indianapolis, will leave Depot, foot of Sixth stroot, at 6.10 o'clock, A. M.

Passengers by this Train connect at Indianapolis with the 1 o'clock, P. M. Train on Lafayette and Indianapolis Railroad for Lafayette and Chicago; arriving at Chicago by 9 o'clock, P. M., of same day, being 9 hours less time than by any other railroad route leaving Cincinnati.

Also, connect at Indianapolis with 1.15 P. M. Train for Terre Haute.

Trains for St. Louis leave Chicago at 11 o'clock P. M., after the arrival of 1 P. M. Train from Indianapolis in the morning, making this the quickest route by far between Cincinnati and St. Louis.

Evening Train will leave as usual, at 3.30 P. M. connecting at Richmond with 7 P. M. Train for Indianapolis: arriving at Indianapolis at 10.30 P. M.

Chicago and Lafayette passengers, by this Train, sleep at Indianapolis, and resume at 6, A. M. next morning,

MUSKINGUM WORKS,

ZANESVILLE, OHIO.

DOUGLASS, SMITH & CO.

WOULD respectfully call the attention of Railroad Companies to their establishment at Zanesville

They are prepared to execute orders, on short notice, for

Passenger Cars of the most superior description,

Second Class Passenger, Mail Express, and Baggago Cars; Freight, Cattle, four or eight wheeled Gravel Cars.

We manufacture a superior

CAR WHEEL,

Over 2500 of which are now running on the Central Ohio Railroad, and many of these have been in use on the road over two years, having in that time only three to crack, and two to be renewed in consequence of the wearing of the Chill. We have also commenced the manufacture of the celebrated

WASHBURN WHEEL,

And are prepared to furnish this wheel, with or without axles. Also, castings for Cars fitted to order at the shortest notice.

BOLLMAN'S PATENT IRON & WOOD BRIDGE.

We are also agents and builders of the above celebrated Bridge. Are now placing upon the piers an iron bridge on this plan over the Muskingum river at Zanesville. We are ready to contract with companies for the construction of this Bridge. All orders addressed

DOUGLASS, SMITH & CO.,
au4tf. Muskingum Works, Zanesville, O.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Resevoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

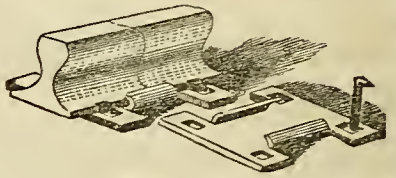
Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,
PRINCIPAL AGENT,
May 18.6m Office, No. 167 Broadway, New York.

Covington and Lexington Railroad Open to Falmouth.

ON and after Monday, the 7th of Nov., and until further notice, Cars will leave Covington daily (except Sundays) at 7 o'clock. A. M., for Falmouth,—stopping at DeCoursey, Culbertson, Grant's Bend, New Philadelphia, Canton Benton, Morning Side, Demossville, Butler and Irving.

Returning, will leave Falmouth at 1 P. M., stopping at all of the above stations.



☞ For freight and passage apply to C. CARPENTER, Freight Agent, Covington Depot.

R. M. SHOEMAKER Superintendent.

Office Cov. and Lex. R. R. Co., Nov. 5th.

Cincinnati, June 20, 1854.

Railroad Line.

Cincinnati, Hamilton & Dayton Railroad.

Summer Arrangement.

COMMENCING WEONESDAY, JUNE 20th, 1854.

TRAINS will run by standard time, which is seven minutes faster than that of Cincinnati.

First Train

At 6 o'clock, A. M., Lightning Express for Dayton, Crestline, Pittsburgh, Philadelphia and Baltimore.

Second Train

At 6.10 A. M., for Hamilton, Richmond, Indianapolis, Terre Haute, Lafayette and Chicago, direct.

Third Train

At 8.20 A. M., for Dayton, Sandusky, Toledo, Detroit, Chicago, Cleveland, Buffalo, New York, Boston, Pittsburgh, Philadelphia, Baltimore and Washington.

Fourth Train

At 2 P. M. for Dayton, Greenville and Union.

Fifth Train

At 3.30 P. M., for Hamilton, Richmond, Indianapolis, Terre Haute, Lafayette and Chicago.

Sixth Train

At 5 P. M., for Dayton, Troy and Piqua, and intermediate stations.

Seventh Train

At 6.30 P. M., for Hamilton and intermediate stations.

The 1st Train, Express,

Will stop only at Hamilton and Middletown.

2d, 3d, 4th, 5th and 6th Trains,

Will stop at all regular stations.

The Seventh Train

Will stop at all way and flag stations.

The 1st Train

Will connect at Crestline at 12.30 P. M., with the Ohio & Pennsylvania Train for Pittsburgh, Philadelphia, Baltimore, etc., forming a direct and continuous line for each of these cities. Cars run through to Crestline without change. Baggage checked to Pittsburgh.

2d Train

Will connect at Richmond at 9.05 A. M., with Train of Indiana Central Road for Indianapolis; arrive at that place at 12 M., thence to Terre Haute, Lafayette, or Chicago without detention. Time as short as by any other route.

3d Train

Will connect at Dayton at 10.45 A. M., with Mad River Train, and arrive at Sandusky at 4 P. M., and go immediately on board the splendid steamers **St. Lawrence** and **Mississippi**, to Buffalo; thence at 7.30 A. M., with Buffalo and N. Y. City Road, to New York; arriving at that place at 10 P. M., also at Crestline 4.20 P. M., with Ohio and Penna. Train for Pittsburgh, Philadelphia, Baltimore and Washington.

The Same Train

Will also connect at Clyde with Cleveland and Toledo Train to Toledo, Chicago and intermediate points; and at Sandusky at 5 P. M., with steamer **Bay City**, for Detroit. Also, with Dayton and Michigan Railroad to Troy and Piqua, and at Piqua with Doyle & Co's Canal Packet Line to all points on Wabash and Miami Canals.

Fourth Train

Will connect at Dayton with Dayton and Greenville Railroad to Greenville, Union, and all points on Bellefontaine and Indianapolis Railroad.

Fifth Train

Will connect at Richmond at 6.40 P. M., with Indiana Central Train for Indianapolis, Terre Haute, Lafayette.

Passengers will bear in mind that the following rates of fare, via Lake Steamers, include both Meals and Staterooms, and that the fare to Philadelphia and Baltimore is One Dollar cheaper, and one less change of cars than by the Columbus route.

Cincinnati, Wilmington and Zanesville Railroad.

OPEN TO LANCASTER.—Two daily Trains, (Sundays excepted) between Lancaster and Cincinnati. On and after Monday, June 26th, 1854, until further notice, trains will run as follows:

The morning Train leaves Lancaster at 5.10 A. M., and arrives at Cincinnati at 11 15. Returning leaves Cincinnati at 3.05 P. M. and arrives at Lancaster at 9.30 P. M.

The downward accommodation train leaves Lancaster at 10.05 A. M., and arrives at Cincinnati at 5.40 P. M.

The upward accommodation train leaves Cincinnati at 7.30 A. M., and arrives at Lancaster at 4.00 P. M.

Trains will stop for passengers as follows: At Amanda, Stout's, Circleville, Williamsport, Four Corners, New Holland, Washington, Rattle Snake, Sabina, Cross Roads, Wilmington, Sligo, Clarksville and Morrow; and on the Little Miami Road at Deerfield, Butterworth's, Water Station, Loveland, Miamiville, Milford and Plainville, and on proper signal by flag, or to the Conductor, at Branch Hill and Linwood, at Turnpike.

The downward Trains connect at Morrow with the Trains on the Little Miami Road for Columbus.

Lines of Omnibusses and Packets will run between Circleville and Chillicothe, and Stages and Packets between Lancaster, Logan, Nelsonville, Athens and Pomery; and Stages between Lancaster, Somerset and Zanesville connecting with the morning train from, and evening train to, Cincinnati.

Fare from Cincinnati to			$2 50
" " "	"	Circleville	3 00
" " "	"	Lancaster	3 60
" " "	"	Chillicothe	4 00

For other information and Tickets, apply at Ticket office, corner of Broadway and Front sts, and at the Little Miami Depot, or to the Station Agents on the line.

E. W. WOODWARD,
Engineer and Superintendent.

☞ The Omnibus Line will call for and deliver passengers to and from the trains to any part of the City.

J. HOWELL, Conductor.

☞ The Company will not be responsible for baggage exceeding $50 in value, unless the same be returned to the Conductor or Agent, and freight paid at the rate of a passage for every $500 in value above that amount.

je. 29

COLUMBUS PIQUA, AND INDIANA RAILROAD.

New route from Columbus, West and from Urbana, East.

On and after Monday September 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between COLUMBUS and URBANA. Will leave Columbus at 4.50 a.m., and 3.30 p.m.—arriving at Urbana at 8.12 a.m., and 6.14 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with the night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morning Cleveland and Zanesville trains can have a few hours at Columbus and leave by the 3.30 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton and Cincinnati.

The 9.15 a.m. train from Urbana connects with the morning train from Cincinnati and Dayton that arrives at Urbana 8.40 a.m.—arriving at Columbus at 12.05 p.m in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Sandusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibuses will connect with the trains at Urbana for the conveyence of passengers to and from Piqua and Greenville over a good Macadamized road.

TESTIMONIALS:

OFFICE OF THE G. & C. U. RAILROAD CO.,
CHICAGO, FEB. 20TH, 1854.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—All of the principal station buildings on this road are furnished with your Depot and Platform Scales, with the exceptions of two scales. Your Scales were adopted after trial with those of other makers, and I take pleasure in now saying, that after more than four years trial, they have given entire satisfaction to us, and the public doing business with the Company.

I am not aware of a dollar's expense being incurred from wear or defect of materials in any part of the scales. The Track Scale, with suspended platform, which you have recently put into our principal depot at this place, judging from present appearance and the use to which it has been put, will, I doubt not, answer the purpose desired, and be equally satisfactory.

JOHN B. TURNER,
Pres't and Sup't.

CENTRAL RAILROAD CO.
SAVANNAH, JAN. 6TH, 1853.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.

DEAR SIRS:—Your Scales, which we have used for many years, gave so much satisfaction, that we ordered from your House, all the Scales necessary for our large new Warehouse. Your agent has just finished putting up twenty-two of your No. 1 and No. 2 Depot Scales and a large Road Scale, and I am pleased with the manner in which the job has been done. I trust and believe that this work will do credit to your establishment.

Respectfully, your obedient servant,
R. R. CUYLER, Pres't.

PORT RICHMOND, PA. MARCH 2D, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.,

GENTLEMEN:—There are now in the Richmond Wharves at the terminus of the Reading Railroad, Twenty-six of your ten ton Track Scales, which have been in constant use for more than six years. The least quantity of Coal weighed annually upon any one wharf has been 400,000 tons. The aggregate quantity weighed upon the twenty-six scales, has been more than one million two hundred thousand tons per annum.

During the time since they have been in use, they have always retained their adjustment without any expense for repairs. They have been tested every year by the Sealer of Weights for the county of Philadelphia, and always found correct, and at the present time their operation is apparently as perfect and as sensitive as when first built.

JOHN E. HOBERT,
Superintendent of Wharves.

STATE OF NEW YORK,
CANAL COMMISSIONERS OFFICE,
ALBANY, JUNE 21, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—Your favor of the 10th, asking my views of the Weigh Lock Scales, manufactured by you, and introduced upon the Erie Canal, is received.

I have no hesitation in saying, that they have fully answered your recommendation in every particular. Their capacity for strength is fully equal to sustain the required burthen. They are not liable to get out of adjustment or repair. The arrangement of the Weighing Beam is admirably adapted to obtain rapid results. I know of no Scale superior to them, in this or any other country.

In great haste, Yours truly,
JOHN C. MATHER,
Canal Commissioner.

PORTABLE SCALES.

The following Railroads have been furnished exclusively, or nearly so, with FAIRBANKS' SCALES:

OUR RAILROAD MAP---NEW EDITION.

We have now ready a new and revised edition of our Railroad Map, containing corrections and additions from reliable sources, making it as reliable as it is possible to make such a map.

We are prepared to print maps for Railroad Companies to illustrate their reports, either from the stone as it now is, or make any alterations to suit parties. Railroad Companies will find this much more economical than getting up maps especially for their roads.

Price of maps as follows:

Plain, sized,	40 cents.
Colored in outline,	50 "
Colored in States,	75 "

A liberal discount where a number are taken.

ACCIDENTS UPON RAILWAYS.

Scarcely do we take up an exchange that we do not note some new accident upon some railroad, resulting in the maiming or killing of a greater or less number of persons daily. This ought not to be. Some method should be adopted to prevent, as far as possible, any such contigency. We are fully aware of the difficulty of such an attempt, nor do we expect to have it fully remedied; yet much might be done by judicious legislation upon the matter. The state of Connecticut has adopted a system for the prevention of accidents upon railroads, the particulars of which were given on on pages 260 and 310 of vol. 1 of the Record, which, we should judge from the recent report of the Railroad Commissioners of that state, had resulted in doing much to prevent accidents by its stringent requirements.

The railroad community cannot be made subject to a general law of the United States, as steamboats are; but state authority has full power, and should interpose for the safety of travelers.

Very many plans could be suggested for securing this desideratum. We have received a communication from an experienced engineer upon the subject, in which he gives some very good ideas, though in the main, his plan is about the same as that of the state of Connecticut, with the addition that every engineer should be licensed by Commissioners duly appointed, and that every road shall have a double track. This latter suggestion, if carried out, would obviate very many accidents like collisions, but would not fully meet the case. Though double tracks and a good fence, would render railroads almost free from accidents, especially if there be sober and steady drivers in charge of the engines.

This is an important subject and should receive the attention of the public. We cannot hope that the different companies will *all* adopt the preventive policy to its full extent, though many of them have done so already to a great degree. Yet there is no such security for the exertion of care and due diligence as good laws well enforced.

Dayton & Michigan Railroad.—S. S. L'Hommedieu has resigned the Presidency of this road, which he had accepted *pro tem* only. Daniel Beckel, Esq., of Dayton, has been elected to the office.

Railroads.

LOUISVILLE & NASHVILLE RAILROAD.

As we mentioned in our last issue, a convention of the stockholders of this company was in session some five days, at Louisville, considering the affairs of the company.

Some dissatisfaction had been expressed by some of the stockholders and others interested in the management of the work; and the city of Louisville refusing to order a levy of the Tax to meet the city subscription already voted, caused the session to be a somewhat stormy one.

The contract between the company and the builders of this road has never yet been made public, the parties choosing to keep the same to themselves. A vote was passed ordering that a certain number of copies of this contract and modification of the same, should be plain the hands of certain parties for the use of stockholders *only*, and not for publication.

In view of the dissatisfaction, the President and Board of Directors tendered their resignations, which were not immediately acted upon. In the meantime a committee of the stockholders had a conference with the Council of Louisville.

The result of this conference was that the Council voted the necessary measures for raising the subscription by the city—$1,500,000. The stockholders refused to accept the resignation of the Board, and it was finally decided that the road should be completed to Elizabethtown, with the exception of the tunnel at Muldrow's Hill, which hill is to be crossed by means of a plank road, between the two points of the railroad.

It is to be hoped that this important road will now go on, and be completed at as early a day as possible. It is a link in a vast and very necessary chain of connection with the South, and should not be delayed by any circumstances not absolutely beyond the powers of man.

It is to be regretted that anything of this nature should have occurred, as it tends greatly to the injury of the credit of the company, and militates strongly against its future welfare.

VICKSBURG, SHREVEPORT & TEXAS RAILROAD.

A full meeting of the Board of Directors of this company assembled at their office, in Monroe, Miss., on the 1st ult., and continued in the discharge of their important duties until Monday evening ensuing, when they adjourned after a session of four days.

P. J. Tournadre, C. E., resigned his office, in view of becoming a contractor on the line.

The contracts were awarded as follows:

John B. Ives, from the Mississippi river, opposite Vicksburgh, west to Richmond—20 miles.

Dr. C. G. Young & P. J. Tournadre, from Red river, at Shreveport, west to the Texas line—20 miles.

John T. Simmons & Co., from the Ouachita river at Monroe, west—10 miles.

Mr. Tournadre was, by vote, continued as Engineer-in-Chief until his place could be supplied.

MAYSVILLE & LEXINGTON RAILROAD.

The work upon this road has been some time suspended, and exertions have been made to raise the necessary funds to complete such portions, at least, as are now almost finished. From Lexington to Paris, 16 miles, is completed; from Maysville to Elizaville, 16 miles and from Paris to Millersburg, 8 miles, are nearly completed; while between Elizaville and Millersburg, 25 miles, an immense amount of work has been done, upwards of $550,000 having been expended upon the portion within Nicholas county. The total expenditure upon the line has been $1,500,000. Some $500,000 more will be requisite to complete the road. But the resources of the company are exhausted, and there must be either an abandonment of the road, entailing a total loss of what has already been expended, or the road must be disposed of to other parties at heavy sacrifice, or the necessary means for completion must be raised at home, for not one cent can be raised upon the credit of the company in the way of bonds or otherwise.

The resources of the company were deemed amply sufficient when the work was commenced; but many causes have combined to render further means necessary. The board of management have done as well as any other board could have done—circumstances beyond their control have rendered the further prosecution of the work impossible, without additional means.

Maysville is deeply interested in the completion of the line; the portion already in operation is an injury to her, unless, and until completed throughout. She has already subscribed liberally, and must, in self-protection, do still more or lose what she has already paid.

We are pleased to see that proper committees are still striving to decide upon some means of preserving the road, at least, if not of completing it. We trust they may be successful.

Ohio Scale Works.—We take great pleasin calling the attention of railroad companies and others, to the advertisement of Messrs. Rigdon, Ryland & Co., as found iu our columns. Mr. Huddart, one of the firm, has been long known as a manufacturer of scales, etc., in our city, and has the necessary experience to enable the firm to give ample satisfaction in any orders entrusted to their care. We commend them to the community as worthy of patronage.

HENDERSON & NASHVILLE RAILROAD.

We take the following items from the report of the President, E. G. Debree, Esq., to the stockholders:

On the 16th of August last, the road was put under contract to Messrs. Van Bergen, Ward & Co., to be completed ready for rolling stock, by November, 1855, to be paid for, one-third in cash, one-third in stock, and the balance in bonds of the company, at 30 years, bearing 7 per cent. Charles Seymour, Esq., is Chief Engineer, a most competent man for the station.

The estimated cost of the road is $2,000,000. To meet which there is individual stock $300,000 and upward, which is being daily increased, in addition to the Contractors' portion.

The company has the power to issue bonds to the amount of $1,500,000.

The work done upon the road reaches $74,860 79. Expenditures, $44,000 00.

The report of the Engineer in Chief which we have not received, enters more fully into the particulars.

Though the Directory have been somewhat straitened for means, yet everything now bids fair for an early completion of the road.

NEW ALBANY & SALEM RAILROAD COMPLETED.

The last rail upon this extended line was laid on Saturday evening, June 24th, thus completing the connection between the Ohio River at New Albany and Lake Michigan, a distance of 288 miles. The first through train passed over the road on Tuesday 27th ult.

The construction of this line has been an ardous undertaking, and harrassing in the extreme to the principal managers. Mr. Brooks, the President, and Mr. Wilson, the Engineer in charge, deserve great credit for the manner in which they have acquitted themselves in the discharge of their several duties.

The road has labored under very many disadvantages as to means. It was commenced, relyiug upon local means entirely for support, throughout the line, the consequence of which has been to depress the value of the stock in the market, and render the procuring of means almost impossible. Uuder these circumstances we feel that a great feat has been accomplished in its completion. The country through which the road passes is great in all the elements of wealth, and will furnish an abundant and profitable traffic for the road.

The completion of this road will be made the subject of a "celebration" on the 4th inst., at New Albany.

Ohio & Mississippi Road, the Western Division.—This end of this road is completed and in operation for forty miles east of St. Louis, and will reach the Illinois Central by the 1st proximo.

Communications.

IRON-SUSPENSION BRIDGES.

The failure of one or two of these structures within some few months past, has called forth several articles upon the subject of the fitness of *Iron* for the purpose of Suspension Railroad Bridges. In a recent number we gave an extract from the Buffalo Democracy upon the subject, for the purpose of calling out a reply; in this we have succeeded.—The following, from the pen of E. W. Serrell, Esq., advocates the efficiency of iron for such purposes when properly used, and proves the same by many examples of long standing.—But we leave him to speak for himself, as he is abundantly able to do.

EDITOR RAILROAD RECORD:

Dear Sir:—The recent unfortunate accident which occurred to the Suspension Bridge at Wheeling has attracted the attention of the public to this class of structures, and has elicited various comments in the general newspapers and scientific journals on their durability.

Some have taken the broad grounds that vibrations and pulsations necessarily render the texture of iron *granular* under all circumstances, and that consequently, if a structure is built so as to be subject to vibration it will sooner or later be so much impared in strength, as to be unsafe for the purposes for which it is intended.

Others have supposed that magnetism has its influence on suspended rods—some argue that iron is most affected in a horrizontal position, others assert that a vertical piece is more readily magnetized—while east and west, north and south are spoken of as conditions by which different results are produced in the texture of metals. Up to this period we are certainly only in a vale of speculation on the matter of magnetism, (so far as strength is concerned.) Let us look at *experience* on the opposite side of the question:

While building the bridge across the Niagara river from Lewiston to Queenston, (which is the largest span yet constructed in the world,) and the bridge over the St. John River, New Brunswick, I investigated this subject. I have since carried on the inquiry and some of these researches may be found in my report to the Common Council of Quebec on the subject of bridging the St. Lawrence, at that city, for Railroad purposes, where it is contemplated to construct a bridge of two spans of eight hundred feet each, and one central span of *sixteen hundred and ten feet.*

In Kircher's "China Illustrated," translated by Mr. Fordham, (Drewry,) there is a description of an ancient suspension bridge in these words—"In the province of Junuan, over a valley of great depth, and through which a torrent of water runs with great rapidity, a bridge is to be seen said to have been built by the Emperor Mingus, of the family of the Hamae, in the year of *Christ, sixty-five,* it is of chains of iron put together. * * *" The platform is on the chains. "The span is three hundred palms," or 330 feet. The bridge of Chonka is so ancient that the inhabitants are ignorant of the date of its erection, and attribute to it a fabulous origin. Mr. Navier says, in the department des Basses Alpes, there is a chain stretched between two hills, six hundred and fifty-six feet long. It is supposed to have been erected by the Knights of Rhodes, and is known to have hung *suspended for over six hundred years.*—It is of three quarter inch round iron in rods.

Thus we have direct evidence that iron in the same form in which it is used in suspension bridges of the present day—subject to pulsations, vibrations, loads, expansion and contraction by heat and cold, magnetism, &c., has stood the test of ages unimpared. Does it uncessarily follow that because some structures have, in consequence of defective plans, accident, or from being used in a manner they were never intended by their designers to be used, failed, that all similar ones should fail likewise? One newspaser article makes the assertion "that there is *an inherent and latent* DEFECT *in iron* that will forever make it an unreliable material for bridge structures, etc. How absurd! A latent *defect* in a *natural* production—a metal; one might as well say there was an inherent defect in water because it will not freeze in mid-summer sunshine, when somebody wants it to, as to say that iron is inherently defective, because it is not applicable at all times to all circumstances—this is, however, the course of reasoning pursued by those who condemn iron bridges.

Now as to its applicability, we know of it having been in use under strain and vibration for centuries; and we know moreover, *that all the failures that have occurred, have been due to causes that might have been guarded against.*

The Brighton suspension pier which was partially destroyed in 1833, was built in 1823, by Capt. Sir Samuel Brown, and was the second structure of the kind built in England.—It was only 12 feet wide and near the water level. The sea rose during a great storm and the wind and waves together tore the wooden roadway from the suspending rods breaking some of them. The main cables were uninjured.

The Menai Bridge had a portion of the roadway carried away during a storm, but this was due to the fact that the main cables were hung in parallel lines, by which the bridge became subject to lateral motion.—None of the iron appeared defective on examination, and the main cables were uninjured. It has now stood for twenty-eight years.

Four suspension bridges have been injured by the passage of troops on a march, as they naturally would be. The tramp of soldiers marching to a given cadence is the same as if a corresponding weight was *thrown* upon upon the bridge. What structure, unless purposely designed for it, can stand such shocks? Our best wooden trussed bridges have broken under similar loads. The wooden arched bridge over the Schuylkill at Philadelphia was broken down by a company of soldiers marching.

As to the Wheeling bridge, the causes of the failure of this beautiful structure are now undergoing investigation. I hazard the opinion, however, from what I have heard of the the sad accident, that it was partially, if not altogether, owing to the *extreme flexibility of of the suspending rods,* which allowed the roadway to be *lifted* by a gust of wind without lifting the cables—so letting the entire platform fall again with accumulated momentum and thus destroyed the structure.

As to opinions, the views of the most learned men in the world on these subjects might be cited in opposition to those who argue for the "inherent defects of iron.". Sir I. Brunel before a parliamentary committee and a Royal Commission, gave it as his experience that vibrations did not impair the strength of wrought iron—others differ with him; I do, also, but there are such facts as these in favor of his position. The Commissioners referred to bent cast iron bars, *one hundred thousand times* successively, each bend being equal to one-third of what would have broken the bars, and yet they were uninjured as was afterwards proved by breaking them in the ordinary way; rolling loads were also passed over bars ninety-six thousand times bending them one half of what would have caused fracture, without injury.

Wrought iron bars were bent ten thousand times periodically, through one half of the space that would have caused a permanent bend, and yet were uninjured. The greatest bend that can occur in a wire cable in use in a bridge, is not equal to the two hundredth part of what will cause a permanent flexure.

To sum up the matter, it is no proof that everything will fail because one thing has—all ships are not lost because one has sunk—all boilers do not burst, though some have—all buildings do not fall, and there are now in use more than twenty times as many good and substantial suspension bridges, long tried and ready to be tried again, as those that have proved treacherous, all put together since the record of such events has been kept by men.

Very respectfully,

Yours, &c.,

EDWARD W. SERRELL,
Civil Engineer.

TERRE HAUTE & ST. LOUIS RAILROAD.—Messrs. Sawyer, Camp & Co., the original contractors upon this line, have disposed of the contract to a Boston company. The work is being pushed vigorously through.

NEW PROCESS OF TAKING FAC-SIMILIES OF BANK NOTES, &c.

The New York Tribune has the following article, translated from a Swedish paper, by which it would seem that bank bills can be counterfeited beyond all possibility of detection. Count P. A. Sparre has invented a machine by which he can counterfeit any bank bill exactly; and what is still more curious, he can at the same time execute a bank bill that cannot be counterfeited. The extract says :

"When one sees Count Sparre with his simple machinery, which any one may manage with the greatest ease and facility, prepare in a few minutes the bank paper in use, which is made of three different laminæ, and in this give, without the slightest difficulty or even exertion of artistic skill, the finest water marks in perfection, and then follows the preparation of the paper by a simple and merely momentary process, but which gives again the printing and engraving absolutely perfect—he feels a strange sensation at the thought of being participator in the secrets of the art which, in less conscientious hands, might ruin all our banks and produce utter and inextricable confusion in our credit system.

"Count Sparre, in his memorial states that his process, if it does not render counterfeiting utterly impossible, at all events increases its difficulty to almost that degree, and offers to furnish the Bank with all its notes for the sum of 25,000 thalers, ($1800) per annum, which is about one half its present expense for paper. The Commissioners have referred the question to a committee of scientific men. In the mean time, Count Sparre is to visit England and other countries to bring his inventions to the notice of the mercantile public."

CHICAGO & MISSISSIPPI RAILROAD—ELECTION OF DIRECTORS.

The annual meeting of the stockholders in the Chicago and Mississippi Railroad Company, for the election of Directors, was held in Springfield, Ills., on the 19th inst. The election resulted in the choice of the following gentlemen, viz:

George Bliss, Springfield, Mass.
Henry Hotchkiss, New Haven, Conn.
Jas. Wright, Owego, New York.
Henry Dwight, Jr., New York City.
Charles Gould, New York City.

It will be seen that two of those who composed the former Board, Messrs. Cleveland and Litchfield, were left out, and their places filled by James Wright and Henry Dwight, Jr. Proxies representing 23,159 shares of stock were present, and the entire vote was cast for each of the above gentlemen, with the exception of Mr. Dwight, who fell five hundred short; that number having been thrown for John Stryker of Rome, New York.

North Missouri Railroad.—We learn that this road is under contract as far as St. Charles, with some 500 hands vigorously at work. It is expected to be completed thus far within a year. Messrs. Sawyer, Camp & Co., are the original contractors.

NEWPORT AND COVINGTON SUSPENSION BRIDGE.

To the President and Directors of the Newport and Covington Suspension Bridge:

Gentlemen:—The entire weight of the bridge, including cables. (between towers,) is nearly 350,000 lbs. This is reduced by the 24 wire guys at the ends to about 300,000 lbs. or 150 tons. The number of strands contained in the 8 cables is 2,515, and the united strength of these is about 3,018,000 lbs. or 1,500 tons.

We have the weight of the bridge and are desirous to know the ratio of tension to the width. The span is 550 feet; deflection of cables 30 feet; and by the established rules for the determination of tension, we find that for every ton of weight suspended, we have 2,366⅔ tons of tension. Hence if we multiply each quantity in this expression by the whole weight of the bridge, we have—

Weight of bridge supported by cables	150 tons
And tension produced by weight	350 do
Thus we see the constant strain is	350 do
Suppose we load the bridge with	100 do
Making weight of bridge and load	250 do
The tension resulting from this weight would be	584 do

This is more than will probably ever be upon the bridge at one time. This would require a multitude of 1200 persons, or at least 50 head of the heaviest cattle.

From the above calculations and facts, the bridge may be considered entirely safe with a weight equal to 100 tons; and with such a load upon the bridge the strain on each square inch of anchor chains would be 8,985 lbs—a small tax upon the strength of good iron. But to tax the bridge with a load of 50 tons, will require no less than seven hundred persons, taken indiscriminately, about which number have been upon the bridge, at one time since its completion. Not more than 700 to 800 persons can walk on the floor at one time, with any degree of convenience; and with the load of 50 tons or 700 people the tension is increased to the entire amount of 467 tons on the chains and cables.

The guys are so disposed about the bridge as to hold it very nearly at repose, both laterally and vertically. It will be necessary to have the render guys, (which are to prevent vibration vertically,) let out by the screws, in cold weather, so that the floor may rise freely, by the contraction of the main cables.

Respectfully submitted,
J. GRAY, C. E.

Covington, June 5th, 1854.

Land Bills in Congress.—The passage of the Minnesota Land Bill is indicative of the success of the whole batch of proposed grants for railroad purposes, reported by the Committee on Public Lands. This bill grants alternate sections for six miles on each side of the line, for a road from the state line of Illinois to Lake Superior, a distance of 250 miles.—The quantity of land donated is about 290,000 acres, estimated to be worth for the construction of the road two and a half million of dollars. The projects endorsed by the Committee on Public Lands will absorb about twenty millions of acres.—*Sandusky Reg.*

The New York Courier and Enquirer, has the following description of the cylinder for the Steamer Metropolis.

A Novel Dining Room.—Messrs. Stillman & Allen are known far and wide as iron men. They have long worked in iron, and fattened on iron, and recently they have taken to feasting in iron. On Friday last, these gentlemen invited a party to dine, and received them in an iron house. It was not a large house, for only twenty-two sat down to table, and the house was filled: nor was it a snug house, for both ends were open to the breeze. But it was a wonderful house, if not a handsome and spacious one, and the guests had no fault to find with the mansion or its garnishing. Fitted up with a temporary floor, table and benches, partially lined with canvas, and draped and mounted with the star-spangled banner, the cylinder—for after all it was but a steamer's cylinder—was the most singular dining-hall that the ingenious mechanism of man has ever constructed.

After the company was seated—numbering more than one famous in kindred pursuits—Mr. Allen arose and made a graceful and appropriate address. The circular wall of that iron cylinder, which will hereafter resound with the struggles of pent-up steam, was filled with sounds of mirth and merriment; and at the close of the repast, loud cheers were given for that great triumph of mechanic art. The tables and benches were then removed—a passage-way planked at each end of the cylinder—a pony was harnessed into a high-topped buggy, and one by one the guests of the day were driven rapidly backwards and forwards through the iron circle, amid the cheers of the admiring spectators.

And now another experiment is tried. A bar is placed across one end of the cylinder, and the numerous spectators who had collected about the spot thronged into the broad-mouthed tube. But more were wanted; and from every nook and corner near by, the brawny workmen of the foundries swarm in until the space is nearly full, and no more men can be found. Then, as they step forth, one hundred and one are counted, who had stood erect within the iron cylinder, and the space had not been filled.

The cylinder of which we are speaking was cast for the new steamer, *Metropolis*, of the Fall River line. It is more than one-third larger than the cylinders of the Collins steamships, which are the largest ever cast in this country. It is one hundred and five inches, or nearly nine feet in diameter, and has twelve feet stroke of piston. Its immense size will give great power with steam of low pressure, thereby promoting the safety and durability of the engine and boilers, and economy in producing an equal amount of power with less consumption of coal.

Chicago & Rock Island Railroad Excursion.—The expense of the Chicago and Rock Island excursion has been estimated at $50,000, of which it is said, Messrs. Sheffield & Farnum, the contractors, bear one half, and the railroad companies the balance.

The road will pass into the hands of the Company on the 10th inst.; but all will be pleased to know that Mr. Farnum will probably continue to superintendent its management. His name is synonimous with success.

IRON HOUSES.

We attended yesterday evening an informal meeting of business men, at the Auction Rooms of M. N. Croft, Court street, Brooklyn, at which Mr. Sexton, the inventor of a new plan of iron buildings, explained his system. He constructs the frame-work of his buildings entirely of cast iron, in sections, which are made to interlock by very close fitting and ingenous joints, secured by keys. This method of building avoids the labor of drilling and bolting, which has been a great inconvenience of iron buildings. It also allows the house to be taken down in sections, and removed at a very little expense. He covers the frame work on the outside with plates of iron, by a similar system of interlocking, without any bolts or other fastenings, the joints being packed with gutta-percha, so as to exclude water under hydraulic pressure. To finish the dove-tailing of the joints, he has invented a machine that can perform the work of forty men. The walls are made hollow and the enclosed space is filled in with a non-conducting composition of beach sand and other substances, so that, as Mr. S. observed, his house becomes, when finished, a perfect fire-proof safe.

The roofs and floors are made of cast iron frames, resembling heavy window sashes, the interstices being occupied, as in the case of windows, with *plates of glass*, of any required thickness and transparency. The glass used is not our common glass, but is in itself a new and valuable invention, being called *malleable* glass, from its wonderful property of toughness allowing it to bend freely without breaking. It can be drawn out into threads of any fineness, and so strong and flexible that they are said to be commencing the manufacture of piano and violin strings from this material. Mr. S. handed round a piece of this glass string for inspection. It was as small as the E string of a violin, and could be bent around the finger, or tied in a knot apparently like catgut.

Plates of this glass being let into the frame work of the floors, the whole is then covered over with a peculiar transparent cement of Mr. S.'s invention, which makes the whole floor look like one solid plate of glass. The cost of roofing with this material, is 75 cents per square foot. The walls inside can be covered with plaster, or finished with iron or glass, at the option of the builder. All the interior ornamentation, such as mantel-pieces, panels, etc., may be of malleable glass.

The advantages claimed for this style of building are, first, its great cheapness, and the rapidity with which it allows in construction. It effects a saving of one-third its cost, and three-fourths in labor, over every other method. Mr. S. stated that he could complete an ordinary dwelling house in forty days.—Second, the variety of style and finish that can be obtained at small cost, by different combinations of the same pattern. The inventor remarked that in the construction of the whole Crystal Palace, but six different patterns were required. Third, the facility which such a building can be taken down and removed.—Fourth, its security from damage by fire or lightning—thus saving all the expeuse of insurance. Other incidental advantages are, its durability, freedom from vermin, etc.—*N. Y. Leader.*

Buffalo & N. Y. City Railroad.—At a meeting of the Directors of the Buffalo and New York City Railroad Company on the 22d inst., Aaron D. Patchin was unanimously re-elected President, and John Wilkenson, Vice President.

RAILWAYS TWENTY YEARS SINCE.

The Philadelphia Bulletin has an extract from a number of the London Couricr of June 9th, 1829, in which was the following:

"More than half a column is occupied with an extract from the Birmingham Gazette, describing the opening of "Shutt End Railway." This work, which was then regarded as extraordinary, ran from Kingswinford to the Straffordshire and Worcestershire Canal, and was of the enormous length of *three miles and one-eighth!* A locomotive engine, then a marvel of art, drew a train of eight cars, carrying 360 passengers, from the foot of the first inclined plane to the head of the second, and returned, being a distance of 3¾ miles, in half an hour, or at the *rate of 7½ miles per hour!* Subsequently, it drew a train of coal and passenger cars, the whole train weighing 131 tons, a distance of 1 7-8 miles, in thirty minutes, being at the *rate of nearly 3½ miles per hour.* Afterwards the engine, with only the tender and twenty passengers, ran a mile on the road at the rate of eleven miles per hour! All these exploits were witnessed by an immense crowd, who were amazed at them; and his lordship, the Earl of Bradford, graciously 'expressed himself much pleased with the extraordinary powers of the engine.' It should be remembered that it is only twenty-five years, or within the age of most of our readers, that these wretchedly slow performances, which would not be tolerated on the meanest railroad now in existence, were regarded as almost miraculous in England."

WABASH VALLEY RAILROAD.

The Marshall Illinoisian, of a recent date contained the following relative to the present condition and prospects of this road:

For the Valley Road the prospects are of the most flattering character. The quotas of stock to be furnished in the counties of Clark and Crawford are already raised, or nearly so; strong exertions are being made in Lawrence to secure the amount required from that county, and we are informed, with such prospects as make final success certain; and the subscriptions alotted to Vincennes, we are assured, can be made up in an hour after the balance of the line up to this point is taken.—Edgar, we are very sorry to learn, is still behind hand in this enterprise; as soon, however, as the southern subscriptions are filled, the construction of the Road will be commenced up to this point, leaving the final extension to Paris contingent upon the citizens of Edgar county coming to the scratch in due season.

City Railroads.—Judge Hoffman, of the Superior Court of New York, has made an important decision involving the legality of the railroads in New York City. The Court were of the opinion that the Common Council holds the fee of the streets in trust for the people; and, while liable as trustees for the faithful, legal and honest discharge of their duty, they might establish railroads in the streets; and that this power was held by them without the aid of any statute, though probably subject to such restriction, as might be imposed upon them by express legislative enactment.

Montgomery & Pensacola Railroad.—The annual meeting of the above railroad company, was held on the 5th inst., at Montgomery, when the following gentlemen were elected Directors for the ensuing year:

T. J. Judge, C. T. Pollard, Abner McGehee, Wm. Taylor, T. M. Cowles, Geo. Goldthwaite, Fleming Freeman, B. S. Bibb, and Geo. W. Matthews.

The following resolution was adopted—

Resolved that in the opinion of the stockholders, it is important that the road be finally located, and as much of it placed under contract as the means and credit of the company will warrant; and the Board of Directors are requested to adopt the most vigorous and prompt means to secure the completion of the road at the earliest practicable period.

☞ Milwaukee will soon have six railways branching from it. The Lake Shore Railway, southward to Chicago (85 miles;) the Milwaukee and Misisippi, through Southern Wisconsin, to Dubuque; the Milwaukee and La Crosse, and the Milwaukee and Berlin, and Milwaukee, Fond du Lac and Oskosh to the Mississippi, Lake Superior and Lake Winnebago. At present, it has but a single railway in operation.

Memphis & Little Rock Railroad.—We learn that this road has been put under contract by its President, Col. James W. Williamson. The contractors are Messrs. John H. Bradley & Co., of Indiana. By the terms of the contract, the first 40 miles, to St. Francis, are to be completed within two years; the remainder to Little Rock, in four years. Some $220,000 will be needed, to complete the portion between St. Francis and Little Rock.

Alton & Terre Haute Railroad.—It is expected that this line will be completed between Alton and the intersection of the Illinois Central, by October next; thus opening two routes thence to Chicago. Every exertion is being made to complete the Alton Extension of the Illinoistown and Belleville road by the same time, giving a railroad route all the way from St. Louis to New York.

Peoria and Oquawka Railroad.—The annual meeting of the stockholders of this road was held at Knoxville. The following gentlemen were elected directors for the ensuing year:

Fitzhenry Warren, of Burlington:
W. S. Phelps, of Elmwood;
G. C. Bestor, R. Rouse, P. Sweat, W. Kellogg, J. Frink, of Peoria;
A. H. Danforth, of Washington;
J. Thomas, of Middleport.

ILLINOIS CENTRAL RAILROAD.

This road, it is stated, will be completed next spring. Its career presents an unexampled instance of good fortune and astute financial management. According to the New York Tribune its resources were originally 2,600,000 acres of land, which were put into the hands of a company of gentlemen, who had subscribed to the capital of the company $17,000,000. The land was estimated to be worth $27,000,000. Thus the means of the company were $39,000 to start with. The last estimates made the entire cost of the road completed $17,000,000. It was determined to issue this amount of bonds, secured on the land, in such manner that the land could not be sold without canceling the bonds. The first thing done was to buy the iron for the whole road, at $45 per ton for bonds at *par*. In six months after the purchase the value of iron doubled, by which the Company saved $1,500,000. The high character of the Company and the rapid progress of the road commanded confidence, so that the Company was enabled to sell the whole of the $17,000,000 at *par*, with the exception of the February issue. The sales were made payable in installments which will be complete in July next. As these have fallen due the money market has tightened, and those who took more than it was convenient to carry have sold to meet installments, and the price has fallen to 75. In the meantime the Company has gone on uninterruptedly until the road approaches completion. The tightness in the market generally by stopping other railroads increased the supply of laborers at lower wages. In the meantime the failure of the harvests abroad have excited the markets for breadstuffs, made farming lucrative, and caused a great demand for Illinois lands. At this juncture the Company advertised its lands, and in a week had applications for 60,000 acres, which at the *minimum* price of $8 will give $480,000, for which bonds must be canceled, and this at the moment when the bonds are at the lowest.

Thus the Company bought iron at the lowest price; rising speculation enabled it to sell all its bonds at par; re-action gave it labor at reduced prices; excitement in farm produce sells its lands at the best rates at the moment when the bonds can be got back on the best terms with the proceeds of land sales. The $17,000,000 of bonds thus negotiated will, it is believed, suffice, without borrowing in any other shape or issuing any other paper, to complete the road 670 miles, and probably close the construction account.—*Baltimore American.*

CENTRAL MILITARY TRACT RAILROAD.—We learn from the Galesburg Democrat, that a meeting of the stockholders of the Central Military Tract Railroad Company was held in Galesburg, on the 12th ult., for the election of directors for the ensuing year. The following gentlemen were chosen.

J. W. Brooks, James F. Joy, Henry Ledyard, and G. V. W. Lathrop, of Detroit; C. G. Hammond, I. H. Burch, J. H. Kinzie, of Chicago; Silas Willard, G. W. Gale, C. S. Colton, Wm. J. Sheldon, Jas. Bruce and Enos M'Euler, of Galesburg.

At a meeting of the new directors, held the same day, J. W. Brooks, of Detroit, was elected president of the board, and David Sanborn, of Galesburgh, secretary.

UNDER CONTRACT—PACIFIC RAILROAD, WEST OF JEFFERSON CITY.—The Jefferson *Inquirer*, of the 17th ult., says the contract for the construction of the Pacific Railroad from that city to Kansas, on the western boundary of the State, has been awarded to Messrs. John Warner & Co., at present contractors on several sections of the road east of that city. We understand from Gen. G. R. Smith, a few days since, that the work will be pushed forward as rapidly as the funds can be procured on the route. The third division embraces the country from Jefferson City to Georgetown, or to a point some few miles west, to which place the road has been finally located. The fourth division embraces the country from the end of the third division to the terminus of the road in Jackson county. The fourth division has not yet been surveyed but we are pleased to learn a corps of engineers are now on the line, having commenced at Kansas, for the purpose of surveying the road cast to the termination of the third division, where Mr. Brown ended his survey.

NEW YORK AND NEW HAVEN RAILROAD.—The Annual Report of the New York and New Haven Road has been published for the business year, ending April 1, 1854:

Cost of Road including N. Y. Property		$3,131,948
Represented by		
Capital Stock	$3,000,000	
Funded Debt	1,991,000	
Floating Debt	140,948	
Gross business of the year		$961,227
From Passengers	$776,250	
Freight and Miscellaneous	185,627	
Operating Expenses and Repairs		467,654
Balance		$493,622
Less paid Harlem Railroad		74,026
Net earrings		$419,596
Last year's surplus, &c		26,677
Total		$446,273
Approriated to		
Damages by Norwalk Tragedy	$252,311	
Interest on loans	183,939	$436,250
Surplus		$10,623

MADISON, INDIANAPOLIS, AND PERU RAILROAD.—The stockholders of this company, met in Madison, and elected the following directors unanimously:

W. M. Dunn, Philo Hurd, Nathan Powell, C. S. Shrewsbury, J. G. Marshall, Madison; E W. H. Ellis, E. J. Peck, J. P. Drake, Allen May, Indianapolis; W. J. Jackson, Tipton; Geo. L. Dart, Peru; V. Worthington, Cincinnati; A. L. Dennis, New York.

The vote cast was 24,630, representing stock to the amount of $1,231,500.—*Madison Banner.*

CINCINNATI AND LOUISVILLE UNITED BY RAILROAD.—The completion of the Ohio and Mississippi Railroad to Seymour, on the Jeffersonville road, has opened a route by railroad between this city and Louisville. The event was duly celebrated on Thursday 29th ult. Regular through trains were started on Monday last.

NEW YORK & ERIE RAILROAD.—The recent strike among the engine drivers upon this road, in consequence of a disagreement between them and the Superintendent has been settled, and the drivers resumed their places. The number that atopped work was 120, which caused much pecuniary loss, as well as irritating delay to the company.

MUCATINE AND OSKALOOSA RAILROAD.—This road was let to contracters on the 1st. ult., in sections of two miles each, as far as the Iowa river, a distance of 24 miles. We get the above from the Burlington *Telegraph*, but find no names or prices.

BELLEVILLE AND ILLINOIS RAILROAD.—This road has been graded and ready for the raila for some time past. The rails have been bought and paid for, and the whole line will probably be completed within the ensuing sixty days.

☞ A railway from Vincennes to Worthington, Greene county, Indiana, is to be put under contract on the 1st proximo. The Worthington *Advertiser* says the grading, &c., ready for the track, can be made for $6,000 per mile.

EXTENSION OF TRACKS ON THE CINCINNATI, HAMILTON AND DAYTON ROAD.—A meeting of the C. H. & D. road was held at the company's depot, yesterday.

The object of the meeting was to receive the report of the Board of Directors, in relation to the extension of the track of the company to the corner of Pearl and Race streets.

The President submitted to the stockholders an estimate of the cost of right of way, depot and grounds, together with cost of construction, which, after full consideration were referred to the next regular meeting, in May, 1855.

ACKNOWLEDGMENTS.

The following periodicals have been duly received for the current month, viz:

THE WEST AMERICAN MONTHLY, late the Parlor Magazine. This periodical is much improved and illustrated with cuts. It is a valuable visitant to the family circle.

THE ODD FELLOWS' CASKET.—This is not, as its name would seem to imply, entirely devoted the interests of the Order, but is an interesting and instructive magazine for the family. Its contributions are well selected and surely cannot but inform the mind.

THE WESTERN JOURNAL AND CIVILIAN, being No. 2 of Vol. XII., devoted to the statistics of the growing West; and containing a great variety of useful and valuable information upon subjects appertaining to the business of this section of the Union.

JOURNAL OF FRANKLIN INSTITUTE OF PA.: A record of scientific discoveries, and replete with valuable contributions to science, etc.

3	"	Peach Or. Coal Co.	"	65	00

MONETARY.

We have no change to note in the rates of interest for money at the East, though the market has been somewhat easier. There will not be much of a change for the better for some time to come yet, nor, on the other hand, need we fear any heavier stringency.

The Stock Market is very heavy. The sales at the Stock Board, as well as by the stock auctioneers, are quite limited, while prices are very low. This is attributed in a measure, to the season, very many of the merchants being out of the City.

Sales by A. H. Nicolay, June 26th—

$5,000	Williamsp. & Elmira RR. 1st mor. 7s, '73	85	25
5,000	" " " " "	85	00
10,000	Lyons. Iowa Cen. RR. 1st mort. 7s '73..	5	00
10	Shares Third Avenue RR. Co	46	50

By the same, June 29th—

$20,000	Tol. Nor. & Cleveland, 1st mor. 7s, '63..	88	00
100	Shares Atlantic & Pacific RR. Co. (shares $1,000 each), $1 per share paid in	78	00

The ratification of the Gadsden Treaty by Congress, and the draft upon the Treasurer of New York for $7,000,000 has somewhat lessened the heavy balance which has so long been hoarded up there.

Foreign Exchange remains at our last quotations.

At the West business is quite stagnant. Money remains active; the supply not equaling the demand, rates are consequently fully as high as at our last quotations.

In the Stock Market we quote but few sales, and those at low figures; the exceeding warm weather has driven all who could leave to the country, nor can we hope for any improvement until cooler weather at least.

The following DIVIDENDS have been declared—

Michigan Southern and Northern Indiana Railroad Company has declared a semi-annual dividend of 5 per cent. on the full stock, payable in cash on the 5th of July. Also an extra dividend from the surplus earnings, of one share of construction stock for every three shares of old stock held. Said stock is to be issued August 1st, with 20 per cent. paid endorsed thereon, and the remaining 80 per cent. paid by installments of 15 per cent., on the first of August, September, October, and November, and 20 per cent. on the 1st of December. The semi-annual payment of 4 per cent. interest on the construction stock will be made on the 1st of July.

Bellefontaine & Indianapolis and Indianapolis & Bellefontaine Railroad Companies have each declared cash dividends of 4 per cent. for the last six months.

In our advertising columns to day will be found the business card of ISAAC OSBORN DAVIS, ESQ., who has recently withdrawn from the house of Hewson & Holmes, and opened a Financial Agency at 38 west Third Street, (Masonic Hall) for the purchase and sale of business papes, railroad securities etc., etc., for foreign or domestic account, and for the negotiation of loans, all strictly upon Commission.

Mr. Davis is an active, thorough business man, and has had a lengthy experience in the buying and selling of stocks, etc., in this market. We can commend him highly to all who may need the services of a Financial Agent in the Queen City, feeling confident that his prompt business habits will give satisfaction to all.

FINANCIAL AGENCY.

ISAAC OSBORN DAVIS,
No. 38 West Third Street,
CINCINNATI, OHIO.

Buys, Sells and Negotiates Loans on Business Paper, and all kinds of Railroad Securities, on commission.

Wabash Valley Railroad Company.

NOTICE TO CONTRACTORS.

SEALED proposals will be received at the office of Allen, McGrady & Co., Vincennes, Ind., until the 25th of July, 1854, for the grading, bridging, masonry, furnishing cross-ties, and laying the track of the entire line of the Wabash Valley Railroad, extending from Vincennes, Ind., to Paris, Ill., a distance of sixty-six miles.

Plans, profiles and specifications are ready at the office of Allen, McGrady & Co., Vincennes, and also at the office of the Company, Marshall, Ill.

The line passes through a densely populated and highly cultivated country, affording every facility for obtaining supplies, and conveniences for carrying on the work.

The work is of an exceedingly favorable character and well worthy the attention of experienced contractors.

Contractors are especially rsquested to give the work personal examination before submitting their propositions.

The work will be divided into sections of about one mile each for the convenience of contractors, and bids will be received for the whole or any portion of the work, reserving the right to reject any or all propositions if deemed unreasonable.

Bids will also be considered for the payment of the work to be either all cash or part cash and part stock.

A. T ELLIS. President.

je21 President.

Pittsburg, Philadelphia, Baltimore and New York!

FARE REDUCED! New route opened to New York, all the way by Railroad, via Cincinnati, Hamilton and Dayton Railroad!

Dangers and annoyances of the Lake Shore route at Erie and Harbor Creek avoided.

The quickest, cheapest and most pleasant route to Pittsburg, Philadelphia, Baltimore and New York. Depot in the west end of the city.

Only route via Pittsburg and Philadelphia by which through tickets can be obtained from Cincinnati to New York.

One less change of cars than any other route.

Passengers leaving Cincinnati on 6 o'clock Morning Train of Cincinnati, Hamilton and Dayton Railroad, go through to Crestline without change of cars, and after having thirty minutes for dinner, proceed by Ohio and Pennsylvania Railroad, arriving in Pittsburg at 8 o'clock P. M. Leave Pittsburg via Pennsylvania Central Railroad, at 9 o'clock P. M., and arrive in Baltimore and Philadelphia at 12 o'clock and 30 minutes (noon) next day; and from thence via Kensington and Jersey City, or Camden and Amboy Railroads, arriving in New York at 4 P.M.

Second Train—Leaves Cincinnati, Hamilton and Dayton Railroad at 8 o'clock and 20 minutes every morning; arrive at Orestline at 4.20 P. M., and Pittsburg at 12 o'clock and 30 minutes, midnight; and after a comfortable night's rest, resume by 7 o'clock A. M. Train, arriving in Philadelphia and Baltimore at 12 o'clock and 30 minues, midnight.

The only offices in Cincinnati at which through tickets can be purchased from Cincinnati to New York via Pittsburg and Philadelphia, are under the Spencer House, and one door below the Gibson House on Walnut street,

FARE.

mr3

To Railroad Contractors, Quarry Men, &c.

THE attention of those interested is called to ASH'S IMPROVED HORSE POWER ROCK DRILL, for Railroad Excavation, Stone Quarrying, Well Boring &c.

This Drill is worked by HORSE POWER, requiring but one horse and one man, to keep it constantly at work, with great ease and velocity, performing 60 strokes per minute. It is cheap of construction and repair. The AUGER weights from 300 to 500 pounds, will drill a perpendicular or inclined hole FOUR INCHES IN DIAMETER, at the rate of from 6 to 16 feet per day in ordinary lime stone. It has drilled 2 feet in one hour.

For rights to use for Counties or States, apply to the Patentee. WILLIAM F. ASH,
May 20, 3* Springfield, Ohio.

Baltimore & Ohio Rail.ad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,
Through Tickets from all Parts of the West,
ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transport, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parkor Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York, And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

J. B. FORD is the Company's Receiving Agent at Wheeling.

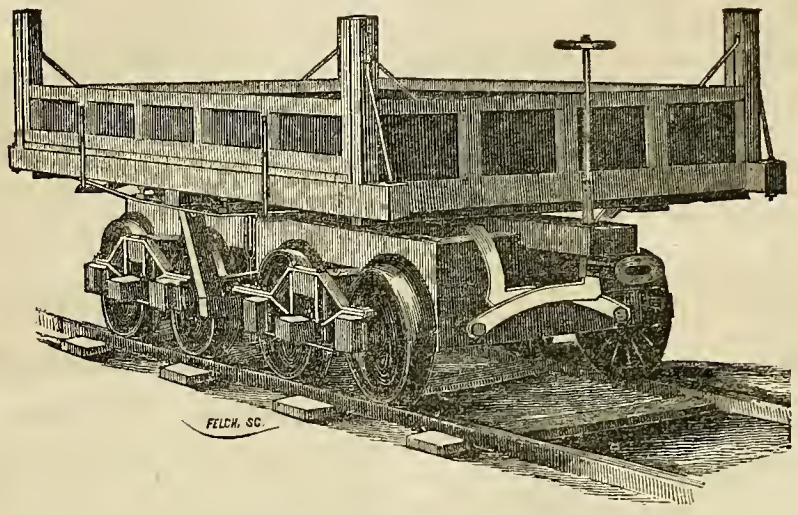
BAILEY'S PATENT DUMPING CAR.

Fig. 1.



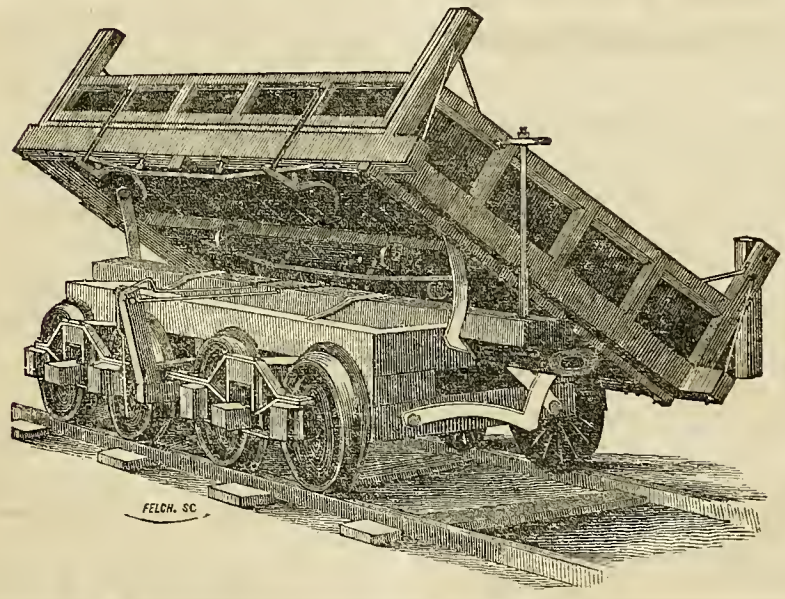


Fig 2.

The above engravings are views of a most important improvement in Railroad Dumping Cars. A patent was granted to C. P. Bailey for the improvement, January 24th, 1854.

Fig. 1 is a view of the car ready to receive the load.

Fig. 2 when dumped, or the load discharged.

This improvement has been in use on the Central Ohio Railroad for several months; also, on the Cincinnati, Hamilton & Dayton; Cleveland, Zanesville & Cincinnati; Cleveland & Columbus; and other Railroads in this state. Also upon the Illinois Central, in Illinois.

The improvement consists mainly, in the adoption of the Wrought Iron Transverse Bars, instead of the Cast Iron Rockers, generally in use. There are, however, other details of importance.

The box or body of the car rests on the ends of the Transverse Bars, whose other and lower ends are attached to the frame of the truck; two of the (wrought iron) bars are used at each end of the cars, to support and operate as guides in dumping the car. This improvement can be applied equally as well to the four-wheeled as to the eight-wheeled car.

One man will dump this car with ease when loaded, in less time than ten men can dump the rocker car, (the long or eight wheeled car is alluded to.) Contractors who have been using it, state that in graveling roads, **it is a saving of two cents per yard,** over the rocker car—that it is a much safer and easier car to manage, preferring it to any other car now in use for similar purposes.

Its liability to get out of repair is not one-tenth that of the Rocker Car. It is also well calculated for carrying and unloading Coal, Lime, Plaster, and all such materials as are carried in Dumping Cars—giving greater inclination in dumping, and discharging the load with greater facility than any other car.

The attention of Railroad Companies wanting Gravel Cars, as well as Coal Cars, is respectfully solicited to this improvement. The cost of this car does not exceed that of the Rocker Car,

To Railroad Companies and Car Builders who wish to purchase Rights, or wish information on the subject, letters addressed to me at Columbus, Ohio, will receive immediate attention.

GEO. L. CHASE.

Columbus, Ohio, June, 1854. Sole Agent for the United States.

TESTIMONIALS.

Engineer's Office, C.O. R. R.
Zanesville, Ohio, Nov. 21st, 1853.

Charles P. Bailey, Esq.,

Dear Sir:—At your request, some two months since, I caused to be placed on this road two of your newly invented Gravel or Dumping Cars. From what I have seen of their work I am clearly of the opinion that they will soon supercede all others of the kind now in use.

We have had the long car filled to its utmost capacity with the various kinds of excavation, and placed it in every position, and one man would dump it with ease in ten seconds, whereas, with the ordinary Rocker Car, it takes ten men one minute to perform the same labor.

The Car is simple in construction—not liable to get out of repair, as there is but little cast-iron about it. It tips to a greater angle than the ordinary car, therefore leaving its load in a better shape. I have no hesitation in saying that when more cars of the kind are wanted on this road they will be built after your model.

Wishing you every success in your undertaking, I remain, with great respect,

Yours. &c.,
GEO. T. CLARKE,
Chief Engineer.

I have purchased for the use of this company, two Gravel Cars, built after the plan of Mr. Bailey, and fully agree to the opinion above expressed.

HENRY O. AMES,
Sup't Cin., Ham. & Dayton Railroad.

I fully agree in the statement made by the gentlemen in this letter, and may also state that they are the best Gravel Cars ever built, in my opinion.

DANIEL McLAREN.
Mast. Machinist Cin., Ham. & Dayton Railroad.

Zanesville, Dec. 21 1853.

Charles P. Bailey, Esq.,

Dear Sir:—From an experence in using your Improved Dumping Car, we have no hesitation in saying that two cents per yard is saved, (in labor and time) by using your car instead of the present Rocker Car.

That the repairs incidental to your car are not one-tenth of what they are on the Rocker Car.

That it is much the most profitable car for contactors as well as the salest one for laborers to use, being easier to handle.

We consider it superior, in every reapect, to a other cars of the kind now in use.

Yours, truly,
E. NEWCOJB,
C. BARRET.
Cont'rs for grav. East. Div. C. O. Railbad.

I have seen the car above referred to at work upon the Eastern Division Central Ohio Railroad, and fully concur with the opinion of Messrs. Newcomb & arret

E. B. DUVA,
Mast. Machinist. Central Ohio Railiad.
Zanesville, December 21, 1853.

Zanesville, Dec. 22, '53.

Mr. C. P. Bailey,

Dear Sir:—As you desire my opinion of your Improved Dump or Gravel Car, that has been in use for the last three months on the Central Ohio Railroad I do not hesitate to recommend it as being the best plan for a Gravel or Dump Car I have ever seen. The bills of repairing Dump Cars, such as are now in general usit is well known, constitute a serious item of expense On this account alone, your plan deserves a prefereucecover all others, as there is but little liability about your c to any such accidents as are constantly occurring to thothers. It dumps to a greater angle, and one or twomen can dump it in less time, and with greater ease tha the ordinary Rucker is dumped by ten or twelve men.

It will give me pleasure to recommend it as superr to any improvement of the kind in use.

ROBERT MACLEOJ
Chief Engineer, P. M. & C. RR.

At a meeting of the Ohio Association of Railroa Superintendents, held at Cincinnati, March 8, 1854, the committee appointed to examine Bailey's Patent During Car,

REPORT,

That they have examined the Car, and consider t'improvement a valuable one; and would recommd to any members of the Association who may need Gvel Cars, to examine and test this Car, before purcking elsewhere.

W. H. CLEMEN'
For the Commite.

Clev Col. & Cin. and Clev. & Erie R. R
Supt.'s Office, Cleveland, O., Apr. 24, 1854.

Mr. Charles P. Bailey,

Dear Sir:—Two of your Patent Imp. ing Gravel Cars have been used on the Cleveland, Cimbus & Cincinnati Railroad for several weeks, and am so well satisfied that they are better than any other that I have just ordered thirty more of the same sort,

Respectfully,
L TILTO?

WINSLOW'S
PATENT COMPOUND RAIL.

THIS RAIL, which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a

THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are—a saving in the wear and tear of Machinery—it saves, to a great extent, in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable. Being practically a continuous Rail for the entire length of the road, without break at the ends of bars, the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effects upon Cars and Machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at Hanging Rock Iron Works, upon the Ohio River, and at Mt. Savage Iron Works, Maryland. Specimens of the Rail and patterns of the same will be gladly shown, as well as information in relation thereto, given by application to

MUSKINGUM WORKS,

ZANESVILLE, OHIO.

DOUGLASS, SMITH & CO.

WOULD respectfully call the attention of Railroad Companies to their establishment at Zanesville They are prepared to execute orders, on short notice, for

Passenger Cars of the most superior description,

Second Class Passenger, Mail Express, and Baggage Cars; Freight, Cattle, four or eight wheeled Gravel Cars. We manufacture a superior

CAR WHEEL,

Over 2500 of which are now running on the Central Ohio Railroad, and many of these have been in use on the road over two years, having in that time only three to crack, and two to be renewed in consequence of the wearing of the Chill. We have also commenced the manufacture of the celebrated

WASHBURN WHEEL,

And are prepared to furnish this wheel. with or without axles. Also, castings for Cars fitted to order at the shortest notice.

BOLLMAN'S PATENT IRON & WOOD BRIDGE.

We are also agents and builders of the above celebrated Bridge. Are now placing upon the piers an iron bridge on this plan over the Muskingum river at Zanesville. We are ready to contract with companies for the construction of this Bridge. All orders addressed

DOUGLASS, SMITH & CO.,
au4tf. Muskingum Works, Zanesville, O.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Reservoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

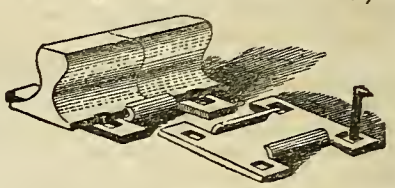
Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,
PRINCIPAL AGENT,
May 18.6* Office, No. 167 Broadway, New York.

Covington and Lexington Railroad Open to Falmouth.

ON and after Monday, the 7th of Nov., and until further notice, Cars will leave Covington daily (except Sundays) at 7 o'clock. A. M., for Falmouth,—stopping at DeCoursey, Culbertson, Grant's Bend, New Philadelphia, Canton Beuton, Morning Side, Demossville, Butler and Irving.

Returning, will leave Falmouth at 1 P. M., stopping at all of the above stations.



☞ For freight and passage apply to C. CARPENTER, Freight Agent, Covington Depot.

R. M. SHOEMAKER Superintendent.

TESTIMONIALS:

OFFICE OF THE G. & C. U. RAILROAD CO.,
CHICAGO, FEB. 20TH, 1854.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—All of the principal station buildings on this road are furnished with your Depot and Platform Scales, with tho exceptions of two scales. Your Scales were adopted after trial with those of other makers, and I take pleasure in now saying, that after more than four years trial, they have given entire satisfaction to us, and the public doing business with the Company.

I am not aware of a dollar's expense being incurred from wear or defect of materials in any part of the scales. The Track Scale, with suspended platform, which you have recently put into our principal depot at this place, judging from present appearance and the use to which it has been put, will, I doubt not, answer the purpose desired, and be equally satisfactory.

JOHN B. TURNER,
Pres't and Sup't.

CENTRAL RAILROAD CO.
SAVANNAH, JAN. 6TH, 1853.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.

DEAR SIRS:—Your Scales, which we have used for many years, gave so much satisfaction, that we ordered from your House, all the Scales necessary for our large new Warehouse. Your agent has just finished putting up twenty-two of your No. 1 and No. 2 Depot Scales and a large Road Scale, and I am pleased with the manner in which the job has been done. I trust and believe that this work will do credit to your establishment.

Respectfully, your obedient servant,
R. R. CUYLER, Pres't.

PORT RICHMOND, PA. MARCH 2n, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.,

GENTLEMEN:—There are now in the Richmond Wharves at the terminns of the Reading Railroad, Twenty-six of your ten ton Track Scales, which have been in coustant use for more tnan six years. The least quantity of Coal weighed annually upon any one wharf has been 400,000 tons. Tbe aggregate quantity weigbed upon the twenty-six scales, has been more thau one million two huudred thousand tons per annum.

During the time since they have been in use, they have always retained their adjustment without any expense for repairs. They have been tested every year by the Sealer of Weights for tbe county of Philadelphia, and always found correct, and at the present time their operation is apparently as perfect and as sensitive as when first built.

JOHN E. HOBERT,
Superintendent of Wharves.

STATE OF NEW YORK,
CANAL COMMISSIONERS OFFICE,
ALBANY, JUNE 21, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—Your favor of the 10th, asking my views of tho Weigh Lock Scales, manufactured by you, and introduced upon the Erie Canal, is received.

I have no hesitation in saying, that they have fully answered your recommendation in every particular. Their capacity for strength is fully equal to sustain the required burthen. They are not liable to get out of adjustment or repair. The arrangement of the Weighing Beam is admirably adapted to obtain rapid results. I know of no Scale superior to them, in this or any other country.

In great haste, Yours truly,
JOHN C. MATHER,
Canal Commissioner.

INFLUENCE OF RAILROADS ON THE INCREASE OF CAPITAL AND THE VALUE OF PRODUCTION.

We see in newspapers, which should be well informed, and hear from men who should have some intelligence, that railways have absorbed too much capital, and that we must stop making railways in order to get money! A more absurd idea than this never was conceived; and if we have no other hope of making money abundant, than to stop railways, we are poor indeed. We shall be bankrupt in the midst of gold mines, and starved in the midst of harvests. Stopping railways is just the same as stopping the California gold mines, or stopping the reaper in the field. In one word, *it is killing the goose that lays the golden egg.* This fact is entirely demonstrable, and our readers will pardon us in a brief exposition of the principles of political economy, applicable to this question. We must premise, however, two or three observations, by way of abundant caution.

First, then, any business may be overdone, and so, therefore, may railways. Too many steamboats, too many stores, in fine, there may be *relatively* too much of any thing. But are there too many railways? East of the Rocky Mountains, there are *thirty* states, containing about 1,200,000 square miles. There are now about 20,000 miles of railway, which gives a mile of railway to every 60 square miles. Now, railway experience proves, beyond a doubt, that averaging the whole country, a mile of railway to 20 square miles is not more than enough to supply the wants of the country. We may have 60,000 miles of railway and not have too much. The country needs that amount to make the products of land available.

Secondly, it is not the *mode* in which money is invested, which makes money scarce; but whether we are investing or *wasting* it?—Whether we are *living beyond our income?*—Whoever *invests* money, if he has it, *saves* it and grows rich. Whoever lives extravagantly, or beyond his income, grows poor. This is the only principle upon which either individuals or nations grow rich, or poor. What is the state of fact in this country? Extravagance, luxury, and overtrading are visible to all eyes. They are all around us. What is the consequence? The balance of trade against us, and a continual shipment of our gold to Europe. The reality and the effect o f

this has been hammered into the heads of bankers and merchants by such hard knocks that they can no longer deny either the facts or the principle upon which they depend. If every railway enterprise were arrested, and all investments in stocks cease, the difficulty would only be greater. So long as we import of foreign wares, and products, from two hundred and fifty to three hundred millions per annum, (more than half of which is utterly useless and a mere waste) so long shall we hear of cramp and spasms in the money market. If we ceasc to send railway stocks and bonds, we must send gold; and if we send gold, we cramp credit; and if we cramp credit, we cramp the merchants. The demand for for railway loans is diminished, by at least three fourths—is the demand for money diminished? Not at all. It has increased.—Every ship from New York carries gold to Europe, and diminishes the solid basis of credits. They must now send gold where they formerly sent railroad bonds. For one year, railway demands have been constantly diminishing, and the country prosperous beyond all precedent. Yet the financial pressure is increased, and cannot end till the importers of foreign goods are made to feel, (as they soon will be) that the losses of the interior merchant must soon fall on them. But our preface is too long. Let us proceed to the real influence of railways on capital and production:

1st. The investment of capital in railways *increases the available capital* of the country, far beyond the investment, and thus adds to, (not diminishes) the commercial capital in use. Let us see.

$2,000,000 in capital is expended in making 100 miles of railway in Indiana. This is raised in stocks and bonds. The *mode* is not material, for both stocks and bonds are ultimately distributed among individuals, who take them for investment, and both are marketable articles. Now let us trace this money from the beginning to the end. We will take a common case of a medium railway, which will pay 8 per cent., the cost of which is raised partly by domestic subscriptions and partly by the issue of bonds. *First*—where does the money *come from?* No matter whether it is subscribed by a farmer, or a Rothschild, the money ultimately comes *from those who have saved surplus means from their business* or *their property*. This may be in very small sums; but they soon accumulate to an immense aggregate. There are 200,000 farmers in Ohio. Suppose these averaged a subscription to a railway of $500 each, only, (and they *can* do it,) it would amount to the enormous sum of *one hundred millions of dollars!*—a sum double the entire cost of all the railways in the state! Yes, if the farmers of Ohio chose to advance one hundred million of dollars to railways, in a single year,—they can do it and defy all bankers, speculators, financiers, bears and bulls of the world to prevent, or oppose the operation. If they have not the money in hand, they have that for which the world must give them money. It is from the *earnings of the people*, that the money comes. The bankers who subscribe to loans and stocks are but agents for the great public, among whom they must distribute it. Now where does the money *go?* and what does it *do?* Why it is *paid out to laborers, citizens, farmers, engineers and machinists* who again pay to merchants and manufacturers. Now, just compare for one moment, the expenditure of $1,000 in *this* way, and the expenditure of $1,000 in silks, or in Government Stocks. In silks it is paid to a foreign workman, then rots on the back. It is gone, and the money is gone with it forever. In Government Stock, it is paid to soldiers, or office-holders, neither of whom return any value to the country, but are mere public paupers. The *ultimate* is a piece of paper bearing 6 per cent. interest; but which is *dead* capital, neither doing work nor accumulating profit. *All the uses* of railway money are profitable to all classes of people. But at last what does the capital *do?* 1st, It sets in operation a machine which is precisely like a manufacturer, *creating* business by the labor it performs and the facilities it affords. 2d, It *creates a capital at once*, greater than its cost. Thus, it is an indisputable fact, settled by experience in the West, that lands within at least *five miles* of a railway, are increased in value full 50 per cent. on an average, the moment the railway gets in operation. In Indiana, this increased value exceeds $30,000 per mile. By the expenditure of $2,000,000, then, we have added $3,000,000 to the value of property.—This is a *minimum* estimate. Suppose, now, that the railway stock in market, (taking the present average of new roads,) sells for seventy per cent. only. There is then $1,400,000 of the original capital available in market. We have then, this final result, so far as the stock and lands are concerned:

Original value of land	$6,000,000
Original Railway Capital	2,000,000
Aggregate	$8,000,000
Present value of land	$9,000,000
Present value of Stock	1,400,000
Aggregate	$10,400,000

Now, on this *minimum* estimate, (and it certainly is a miuimum,) the construction of railways has *increased the capital* of the country $2,400,000. In other words the advance of $2,000,000 in railway capital, has returned $4,400,000, in positive capital. This capital now is available; for lands were never so marketable as they are now.

But, some one may say, this is not *commercial capital*. It will not pay bank notes and buy goods. We shall come to that and make that equally clear. In another number we shall demonstrate that railways have *created* a real and an enormous capital in this country without which the mercantile interests of this country, would at this moment be crushed.—California and railways alone have saved them.

The question we have here met, relates to the absolute increase of capital, by the railroad influence on property, without discussing the commercial influence they have conferred.—In the last three years full three thousand miles of railway have been constructed and finished. The cost is *seventy-five millions of dollars*, and that capital has returned to the country *one hundred and sixty-five millions*, of which more than fifty millions are in marketable stocks, and more than a hundred millions in marketable lands. What an absurdity then, to talk of railways having absorbed *capital!* They have *created* it, to an extent equal to the gold of California. The *commercial* increase of capital by railways, we shall consider in our next.

Railroads.

LEXINGTON & DANVILLE RAILROAD.

We are now in possession of the reports of the President and Engineer of this company from which we gather some interesting facts. The entire report will be before the public so soon as the printing of the Treasurer's statement is completed. It appears from the Engineer's report, that 14 miles of the road north of the river and 1 mile south of it, are graded, including some heavy rock cuts and all the slope wall. The tunnel, 512 feet long, through solid rock, is completed. The masonry of the Jessamine creek bridge, and the remainder of the material and workmanship contracted for, as also that for bridging over Wall's branch. The engine sheds, passenger and freight houses, repair shops, etc., at Lexington are now being constructed. Cross ties and timber for 20 miles of the road have been delivered; iron rails, chairs and spikes are on hand; two engines built for this road, at the East, are finished, and the cars are under construction at Maysville. The Kentucky river bridge is advancing well. The towers on the north side are completed, and in the best manner; the towers on the south side are being built, and the Engineer seems to have no doubt of the completion of the bridge in good time. Other work on the bridge, relating to the anchorage, is also finished, and a large part of the iron and timber delivered. The road is expected to be completed and in profitable use from Lexington to Nicholasville, if not to the river, sometime before the connection is made through to this place, as neither the bridge, nor the heavy cuts on this side of the river, can possibly be completed at as early a day as the remaining parts of the work. The efforts of the company, therefore, are more particularly directed to the work

north of the Kentucky river. The length of the road has been reduced from 36 to 34 miles, differing but 1½ miles from a straight line.—The Engineer's estimate of the cost of the road, equipped, is $1,314,000, circumstances not altogether unforeseen, having increased the estimate since his last report. The following is an extract from the report of the late President of the company, J. S. Hopkins, Esq.:

We gather that the work has been much delayed by the failure of the sub-contractor for all the line north of the Kentucky river. The stringency in the money market is another cause of the delay. New arrangements have been made by which DeGraff & Co., undertake the work north of Nicholasville to Danville, and take in payment the remaining county bonds and the balance in 7 per cent. bonds of the company. The price is somewhat in advance of the former contract, but as the company had no other means of prosecuting the work, they decided this to be better than to let the work drop.

The original bonds of the company were issued at 6 per cent. These, to the amount of $600,000, will be cancelled, and the same amount issued bearing 7 per cent; this being rendered necessary by the stringent state of the money market, which would not admit of the sale of the 6 per cent. bonds, except at ruinous sacrifices.

The road is now in competent hands, that portion between Nicholasville and Lexington being in charge of King & Miller, and will doubtless be prosecuted to completion with very little delay.

MISSISSIPPI & WABASH RAILROAD.—As true chroniclers of railroad news, we must make mention of this road, some time since proposed, and laid down upon our map. It commences at Greencastle, Ia., thence, via Urbana, Middletown, Mt. Pleasant and Leroy to Bloomington, Ills.

The citizens of Leroy held a meeting on the 12th ult., for the purpose of considering the prospects of this road. A committee was appointed to correspond with and visit the different points upon the proposed line, and adopt such measures as they should deem best to procure information and a speedy survey of the route. A correspondent of the Illinois Central Times, says that a citizen of Cincinnati has pledged himself to furnish $40,000 out of his own funds in aid of this enterprise. Who can it be!

DAYTON, XENIA & BELPRE RAILROAD.—There is a much larger business done on the completed portion of this road, than could have reasonably been expected. The receipts for passengers and freight are increasing rapidly and now average about $200 a day.—This, for a new road only fifteen miles in length, indicates a most favorable position in the railway system.

From the N. Y. Times, 1st.

ATLANTIC & PACIFIC RAILROAD—INTERESTING DISCLOSURES.

We have heard but little of late concerning the movements of the Atlantic and Pacific Railroad company, which was organized something like a year ago under the auspices of Robert J. Walker, Levi S. Chatfield and other distinguished political financeers. We have just received a copy of a pamphlet prepared by Mr. C. G. Peebles, which professes to make sundry startling revelations concerning the recent operations of the leading managers of this important company. Mr. Peebles claims, and we believe with justice, to have begun earlier, and labored harder in the advocacy of a railroad to the Pacific, than any other man living, unless it be Mr. A. Whitney. On this account he has taken a deep interest in the progress of this company, and feels it right that the public should be aware of its movements. Mr. Peebles gives the following as a list of stockholders in the company:

The stockholders of $1,000,000 and over are as follows:

R. J. Walker	$10,000,000
Anson Jones	1,000,000
Sam. Waggoner	2,000,000
Jeptha Fowlkes	5,100,000
S. G. Langdon	1,000,000
T. J. Green	7,000,000
M.— Hunt	5,000,000
Robert Rose	1,000,000
S. E. Church	1,000,000
S. Chamberlain	1,000,000
Stewart Newell	1,000,000
L. S. Chatfield	39,675,000
Total	$74,755,000

In the above subscription there is more humbug and less money than can can be found on any subscription paper on the face of the earth—Walker's Texas Central Railroad excepted. The real and personal estate to uphold nearly $75,000,000 of this stock will not amount to $1,000,000.

The subscribers of $500,000 and over, and less than a million, are—

B. Barker	$500,000	Edgar Conkling	$500,000
Joel J. Sever	500,000	B. H. Cheever	500,000
H. B. Spelman	500,000	E. T. Bridge	500,000
H. E. Storrs	500,000	Caleb S. Woodhull	500,000
J. Van Cleve	500,000	Wm. N. Bilbo	500,000
E. W. Hudson	500,000	W. W. Deland	500,090
O. V. Hallenbeck.	500.000	John S. Du Solla	500,000

These fourteen men represent $7,100,000 of the stock and are possibly worth half a million—all told.

Of over $100,000, and less than $500,000, there are the following subscriptions:

C. C. Walden	$200,000	E. C. Cabell	$200,000
B. T. Smith	200,000	M. G. Hart	200,000
B. G. Shields	200,000	J. M. Comstock	125,000
T. Butler King	300,000	W. T. Ward	200,000
Thos. G. Johnston.	250,000	J. W. Gray	200,000
Robert S. Newton.	200,000	J. W. Sleight	200,000
Wm. Richards	200,000	A. Scott	350,000
John Vernam	200,000	Geo. M. Preston	150,000
E. H. Thompson	250,000	Joseph Rushan	250,000
Cyrus Moore	200,000	Geo. N. Barker	150,000
Geo. W. Weston	200,000	W. Scott Jarvis	150.000
Abraham Moore	200,000	Joseph Hufty	200,000
Isaac E. Holmes	200,000	Clark Bronham	200,000
Richard Tweed, Jr.	200,000	Robert G. Nellis	200,000
Alex. H. Wallis	200,000		
Total			$5,975,000

Of these 29 men it would be difficult to designate one who could be regarded as a capitalist. There may be half a million among them to back up the $5,975,000.

Mr. Peebles says, that of the assessments due up to the 20th of May, which amount to $350,000, not $40,000 has been paid;—and there are probably not over $1,000,000 of *bona fide* subscriptions on the stock, nor over *two* millions of money standing behind the one hundred millions subscribed. And even the few who have subscribed in good faith, Mr. Peebles alleges, have been put completely in the power of Messrs. R. J. Walker, T. Butler King, and Jeptha Fowlkes, who are all members of the Executive Committee.—To show how this has been done, Mr. P. publishes the following resolutions, said to have been adopted by the committee:

Nov. 5, 1853.—Mr. Walker submitted a resolution that all stockholders holding over $300,000 of the stock of the Company, be "respectfully" requested to transfer the excess beyond that amount to the Company, and stated that unless such a resolution was adopted he would retire from the Company. That resolution was amended by inserting $500,000 instead. And, as amended, was adopted. Let us see how far Mr. Walker regarded his resolution and declaration.

Nov. 25.—On motion of Mr. Walker, a committee, consisting of Walker, Woodhull and Bridge, was appointed, with power to accept or reject any proposition for transferring to this company any grants of land or other privileges or rights to build any part of the Atlantic and Pacific Railroad in California, Arkansas, or Mexican Territory.

Dec. 15.—Four members, to wit; Walker, Fowlkes, Woodhull and Bridge, being present, Walker proposed and offered to the Atlantic and Pacific Railroad Company, "all my interest, present or contingent, in any railroad charter or land conceded therewith that may be obtained by me from the Government of Mexico, in the states of Chihuahua or Sonora, assigning only without warranty of any kind, my interest, present or prospective, as above stated, on the following terms:

1. The payment to me of $10,000, cash.

2. The return to me of $500,000 of full paid stock of the Central Railroad of Texas, in case I shall have paid the same for said grant and charter, and not otherwise; or the assignment to me at the option of the company, of $500,000 of full paid stock of the Atlantic and Pacific Railroad Company, to be exercised and carried into execution, on or before the 15th of January, 1855."

Whereupon, it was "Resolved, That the preceding offer of R. J. Walker be accepted.

"Resolved, That the Treasurer of the Company be directed to give R. J. Walker credit on the books of the Company for the said sum of $10,000."

Mr. Peebles says that Mr. Walker took a copy of these resolutions to Mr. Leland, the Secretary, (there being no Treasurer,) and demanded *a receipt of payment* on the first assessment on his $10,000,000 of stock, and, with the aid of Woodhull and Bridge, finally obtained such a receipt.

Dec. 16.—Present, Walker, Fowlkes, King and Woodhull.

Resolved, That Robert J. Walker, T. Butler King, Jeptha Fowlkes, or a majority of them, be, and they are hereby authorized to submit to the Governor of the state of Texas a proposition, on such terms as they may deem best for constructing, equipping and operating the Mississippi and Pacific Railroad, as authorized by the act providing for the construction of said road, passed by the Legislature of the state of Texas, and approved the 21st December, 1853; and that they be also authorized to contract with the Governor of said state for building, equipping and operating said railroad, on such terms as they may deem best, pursuant to the provisions of said act; and that the said Walker, King and Fowlkes, or a majority of them, be further authorized to perform all the acts, and give all the guarantees required by said law; that they, or a majority of them, be also authorized to associate with them in said proposals, contracts and guarantees, such persons as they may select; and that they, or a majority of them, be further authorized to organize the company, under said law, for the building, equipping and operating said road, and electing the Directors thereof."

"Resolved, That all the rights, privileges, benefits and advantages, grants, and donations, accrued or accruing under the act of the state of Texas, entitled an act to provide for the construction of the Mississippi and Pacific Railroad; and the contracts to be made for building, equidping and operating the same, shall inure to and be held for the benefit of the stockholders of the Atlantic and Pacific Railroad, as designated, and to be designated by the Executive Committie of said Company, including all rights already secured by contracts with other persons, companies or associations, as authorized or to be authorized by said Committee, or already ratified or confirmed by them."

Resolved, That Robert J. Walker, T. Butler King and Jeptha Fowlkes, or a majority of them, be, and are hereby authorized to make such arrangements as they, or a majority of them, may deem best for the purpose of securing to this Company the charter of the New Orleans and Texas Railroad Company, and such other charters granted by the state of Texas, as they, or a majority of them, may deem best for the interests of this Company; and if they deem necessary for the organizing of the same, that they, or a majority of them, he, and they are hereby constituted the general agents of the Atlantic and Pacific Railroad Company with full and plenary powers to represent and act and contract for them in all matters and things whatsoever, connected with the rights and interests of this Company.

"Resolved, That Robert J. Walker, Jeptha Fowlkes and T. Butler King, or a majority of them, be, and are hereby authorized and empowered to issue and deliver so much and such portions of the stock of this Company as they, or a majority of them, may deem or find necessary to fulfill the various agreements or contracts, and

carry out the powers conferred on them by the resolutions this day adopted."

Mr. Peebles says that another resolution was adopted authorizing Mr. Walker to settle with all the agents of the company; and still another authorizing Messrs. Green and Woodhull to allow such sum to Mr. Walker as they see fit, and others allowing them a million each to be full paid stock. The effect of these resolutions would seem to be to put the whole company, stock, stockholders, agents, contracts, and general interests, past, present and future, into the hands of Messrs. Walker, King and Fowlkes.

RAILROAD ACCIDENTS.

We are called upon to chronicle another "horrible accident" upon the Susquehanna Railroad. As the particulars have been fully circulated in the daily papers, we will not occupy space by repeating them in our columns.

In the last issue of the RECORD, in a brief article upon the subject of Railroad Accidents we adverted to the Railroad Law of the state of Connecticut. We now give a portion of the report of the Commissioners, appointed under that law, showing the effects of legislation, offering suggestions, and giving the general results of their observation in the discharge of their duties.

We are indebted to the American Railway Times for a copy of the report. The report says:

The Commissioners are further called upon by law to make such suggestions for legislation, in relation to railroads as the public interest shall seem to require. For this purpose they have consulted with the Superintendents of the railroads in this state, and with other gentlemen of experience in such matters; from these sources the Commissioners have received many valuable suggestiuns.

OF BRAKEMEN.—Objections have been urged in a few instances, against that part of the law requiring a Brakeman "to be stationed at the brake of each and every car run, or intended to be run, on any railroad in this state, at a greater rate of speed than thirty miles an hour between stations." The following has been suggested as a substitute for this provision of the law. "There shall be on every Express passenger train of three cars, three brakemen, and for every two additional cars one brakeman." It is claimed that this amendment would save the expense of a brakeman on many occasions, and that the train would be about as completely under the control uf its managers. The Commissioners, however, are of upinion, derived from all that they have seen and heard on this subject, that the law in this particular should remain in force at least another year.

LANTERN.—A Superintendent suggests the passage of a law, requiring that a lantern shall be lighted, and furnished with a reflector of not less than 10 inches in diameter, and placed in front of the engine on all trains running in the night season. The Commissioners recommend a law in accordance with this suggestion.

CONDUETORS, BAGGAGEMEN AND BRAKEMEN.—The passage of a law has been urged, requiring Conductors, Baggagemen and Brakemen. to wear badges while on duty, indicating their office. The Commissioners are of opinion, that a law or regulation of this kind would greatly promote the convenience of the public.

WAY PASSENGER TRAINS.—The Superintendents of two roads have suggested that the third Section of the law, Chapter 74, Acts of 1853, should be so amended as not to require the slow, or way passenger trains, to stop at switches, unless a man stands at these places with a signal. The wrong position of switches has hitherto been the cause of many accidents in this state; not one has occurred from this source the past year, for these reasons the Commissioners are in favor of this law, and do not recommend its alteration.

FENCES.—Some of the railroads are not suitably fenced. On others where the fences are adequate for the protection of the road, the bars at crossings are often left out of place, so that cattle find their way on the railroad. The Commissioners are of the opinion that a law should be enacted to correct this evil; the subject has been often called to their attention by men engaged in operating railroads.

EXCHANGE OF BUSINESS BETWEEN RAILROADS.—Complaints have been made to the Commissioners that some of the railroads in this state do not give at places where they intersect and connect, proper facilities to each other, or to the public, in exchange of merchandize carried for freight, being engaged, as claimed, in efforts to force this business into new channels, by unnecessary detentions, heavy charges, or by other unreasonable means. The general railroad law of this state, chapter 37, section 16, provides that when two roads meet at the same terminus or intersect each other, the Commissioners of said railroad in a joint meeting shall, at the request of the Directors of either of said roads, prescribe such regulations relative to the exchange and receptien of passengers and luggage, as they may deem best. The Commissioners recommend that this law be so amended as to enable the local Commissioners on such railroad, to prescribe in like manner, regulations relative to the reception and exchange of freight, and all other business between said roads; or to pass a law as suggested by men of experience in railroad operations, authorizing a judge of a Superior Court, upon the petition of either party, and upon notice to the other party, to appoint three commissioners, not interested upon either road, who shall upon due notice to the parties interested, proceed to determine and fix such rules and regulations, and such rates of compensation between the parties as they shall deem just and reasonable. A law of this kind would not materially differ from the law of Massachusetts, regulating such matters.

OBSTRUCTION TO SIGHT.—The sight of the track from the engine, for a safe distance in advance of the train, even at moderate speed, is obstructed on curves in several places, on some of the railroads in this state, generally by the interposition of trees, sometimes by the sides of excavations, and sometimes by buildings. These Companies have expressed a desire to remove these obstructions, but claim they have no right to take this property on appraisement, when the owner refuses to sell them at a reasonable rate; and hence, that a law should be made giving them a right to remove such obstacles, when requested by the Commissioners, on paying just and reasonable damages therefor,—this to be ascertained, in case the parties do not agree, by three disinterested persons, appointed by a judge of the Superior Court, to assess the same.

The Commissioners make the following suggestions relative to the general management, in some particulars, of the railroads of the state, without requesting legislation thereon.

HAND CARS.—These should be passed over the roads before trains resume the operations of the day, such is the usual practice. The most serious railroad accident in this state, the past year, would have been prevented if this practic had not been omitted on the morning preceding the accident.

TIME-PIECES.—Conductors and engine-drivers on all of the roads in this state but one (from Stonington to Providence), furnish watches for their own use in running their trains; they are usually required to regulate these by a clock kept for that purpose; it is well known that watches carried on the cars or in engines rapidly deteriorate, and require frequent adjustment and repairs. It can hardly be expected, that men with the moderate compensation usually paid for the discharge of the responsible duties of their stations, should at all times keep their watches in reliable order. A safer practice would be for the corporation to furnish each conductor daily with a watch from the office, known to be right and in order; this he should return to the office for comparison and adjustment, after the duties of the day are performed. This subject, in the opinion of the Commissioners, requires more attention on some of the leading roads of the state, than it has hitherto received.

SWITCHES.—The heel, or pivot end, of the switch rail is secured at some of the switches to the main track, by putting a pin through the rail; this usually extends to the sleeper below; the hole made through the rail for this purpose takes away a large portion of the material in its cross section, and consequently the strength of the rail at this point. The pivot end of all switch rails should be placed into a cast iron chair of suitable form, and thus preserve its strength entire, where most required.

ROLLING STOCK.—The rolling stock on the various roads in this state, is in most excellent order; the passenger cars are provided with all the usual safe-guards, with strong safety chains to the truck frames, and with safety beams to the axles, (with but few exceptions.) The axles and journals have been recently increased in diameter on many of the roads, and more care taken their manufacture. It is the practice on some roads, and should be on all, to remove the trucks, or the wheels and axles, from the passenger to the freight cars once or twice a year, and to substitute new running gear for the passenger trains.

SIGNALS AND REGULATIONS.—The red ball, or flag, is used to denote danger, on all of the roads in this state, and at every place on the same, with some exceptions, at draw-bridges, on one or two roads, where the red signal denotes safety at that particular point only.—Signals denoting either danger ur safety should be positive in their character and all alike on the same road, and denote the same thing wherever they are placed. Greater care should be taken on some of the roads to see that the operatives understand the regulations alike, and as they were intended to be understood by the Superintendent. So much of the law of 1853, chap. 74, as prescribes the duties of engine-men, switch men, and other operatives on railroads, and affixes severe pen-

alties for their violation by these men, is published with the regulations of the New Haven, Hartford and Springfield, and of the Norwalk and Worcester railroads. This example should be followed by the other railroad companies of the state.

Draw-bridges.—There are 17 draw-bridges on the railroads in this state, much the largest portion of them are small and seldom opened; permission has been given for the passenger trains to pass over 12 of these without being first brought to a full stop near these places; trains stop before passing the other 5, as the law requires. The Commissioners are of opinion that before any draw-bridge is opened, the following precautions against accident should be taken in addition to any others now in use. The bridge tender must send a man towards the approaching train at least 100 rods, whose duty it shall be to put thin bars or swing a gate across the track of the railroad at this place, and raise also the signal in use on the road denoting danger, and who shall remain there till the draw is closed; when the gate and signal is seen by the bridge tender in these places, he raises a signal of danger, and then opens the draw; after this is closed and safely secured, the signal at this place is removed, the signal first raised is then lowered and the bars or gate removed from the road.

Inspection of cars.—These receive proper attention and examination on all of the roads, they are frequent and thorough on all roads having a large passenger business.

Examinations relating to the causes of accidents.—All proper inquiries into "the facts and circumstances relating to them," should be made by one or more competent persons, their cause ascertained and a remedy applied to prevent a repetition.

Temperance.—The Commissioners have good reasons to believe that some of the railroad operatives in this state, use intoxicating drinks; this is prohibited in the regulations of only one road—the New Haven and New London. The Commissioners are of opinion that its use should be prohibited by stringent regulations, and banished in practice, by the operatives and officers of all the railroads in this state.

Returns.—The blanks for these were furnished to the offices of the railroad companies early in February, with a request to fill them, so far as their records and accounts would enable them to comply without much inconvenience, and return the same by the first of April. These, although respectfully requested and urged by the Commissioners from time to time, were not returned, except in one or two instances before the 1st of May, some of them from the principal roads not till the 17th. This report has been delayed from this cause, and time has not been allowed to correct small errors in these returns.

Violations of law.—The Commissioners are called upon to report "any violations of law on the part of any railroad corporation, that shall come to their knowledge." It has not been alleged, except in a single instance, that any of these corporations have violated any of the laws of this state. The New York and Boston railroad company brought a petition before the Commissioners on the 10th of April, representing that the Southbridge and Blackstone railroad had been extended from Massachusetts into this state, and was in process of construction therein, on a course and direction not specified by their charter, and on a route not authorized by any charter, to the great prejudice and injury of the petitioners; whereupon they requested the Commissioners to ascertain the facts, and report the same to the Hon. General Assembly.—The Commissioners heard the parties at Pomfret, on the 22d of April, but have not been able since that time, in consequence of the pressing demands of their other duties, to ascertain and arrange the facts essential to determine this question, or to ascertain clearly the extent of their own powers to act in this matter.

Operations of the act of 1853, chapter 74.—That the operation of this law has been highly beneficial to the public as well as to the railroad Corporations of this state, does not admit of a doubt, in the minds of the Commissioners. Its beneficial effect is marked, and readily seen in the daily operation of these roads. The principal managers of many of them have remarked to the Commissioners, that the operatives were more obedient and attentive to duties; that in consequence the the roads were more safely and carefully managed. The various suggestions and recommendations of the Commissioners, made to the Superintendents and officers of these railroads, have been adopted and carried into effect as far as practicable; to these gentlemen the Commissioners are under many obligations, for the facilities extended to them, in the discharge of their duties.

All of which is respectfully submitted.

Z. W. BISSELL,
M. B. HARVEY,
J. N. PALMER,
Gen. RR. Commissioners.

Cincinnati, Hamilton & Dayton Railroad—Earnings for June, 1854.—We are indebted to Mr. Bond for the monthly return of earnings on this line, which we give below. We are pleased to see such an increase notwithstanding the great reduction in the rates of *through* fare. The position of the Cincinnati, Hamilton and Dayton road is such, in its local business, as not to be materially effected in its profits by a reduction of fare on its through business, while its local rates remain unchanged.

The Earnings for June, 1854, were as follows:

Passengers	$24,294 61
Freight	14,660 23
Mail and Express	1,020 31
Total	$39,975 15

June, 1853, as follows—

Passengers	$20,528 08	
Freight	10,905 00	
Mail and Express	869 85	
		32,302 93
Increase about 24 per cent		$7,672 22

Great Western, (Canada,) Railway.—This road was opened on the first of January last, and has, therefore, been in operation nearly six months. For five months and a half, (from January 1st to June 16th,) the number of passengers carried, and the receipts have been as follows:

Number of passengers carried	160,894
Receipts for passengers	$365,093 00
" " freights	108,679 00
" " sundries	19,908 00
Total	$493,680 00

North-Western, (Pa.,) Railroad.—From the Butler Herald we learn that that the North-Western Railroad from New Castle to Blairsville, on the Pennsylvania Central Railroad, in connection with the Cleveland and Mahoning road, was sub-let at Butler to contractors, on the 17th ult.

The work is to be pushed through with all the force and rapidity which can be put upon it. The road is to be completed and put in running order from Blairsville to Freeport, on or before the 1st of October, 1855, and to New Castle on or before the 1st day of May, 1856.

This Company have been largely assisted by the city of Philadelphia, and probably enter upon the construction of their work with a larger amount of good stock subscriptions in proportion to the length of line to be constructed, than almost any road that has been undertaken in the West.

New Albany, Louisville & Sandusky Junction Railroad.—In our issue of the 15th ult., we noticed the fact that this line had been put under contract from New Albany to the Ohio state line, 105 miles, leaving only the small portion of 12 miles, between the state line and Eaton unprovided for. We now learn under date of July 7th, that this portion has been let to the same contractors, Messrs. J. & C. Howard, and will progress at the same time. The Messrs. Howard, of Detroit, are considered very responsible men, and fully able to carry out their engagements; their names, however, do not appear upon the subscription list of the Record, an evidence that they do not keep up with the times.

Wheeling Bridge—Injunction granted against its Re-Construction.

In the United States Circuit Court a petition was presented applying for an injunction to restrain the Wheeling Bridge Company from re-constructing the bridge over the Ohio River at the same elevation as the old one, alleging that it is the intention of the company to raise the two suspended cables left by the storm, and construct a new bridge at the same elevation. The petition alleges that the navigation of the river would be greatly obstructed thereby.

The bill was accompanied by affidavit setting forth these facts, and from its tenor seems to be a bill to execute the former decree of the Supreme Court, with an order to stay the re-construction of the bridge. In the meantime the injunction was granted, with an order for the work to be stayed.

The validity of the act of Congress making the bridge a post route will now come up.

☞ The debt of the city of New York, at last report, was under $14,000,000, and the amount in the hands of the Commissioners of the Sinking Fund, for the redemption thereof, was nearly $4,000,000.

NEW YORK AND NEW HAVEN RAILROAD COMPANY.

The Directors of this Company have issued the following card:

At a meeting of the Board of Directors of this Company, holden this morning, it has been made apparent on a hasty examination of the Stock Books, which have been kept by the late President, Robert Schuyler, as Transfer Agent, in New York—that by means of false entries, erasures, and other similar practices, an issue of illegal and fraudulent Stock has been made within a few months past to the amount, as nearly as can now be ascertained, of nearly twenty thousand shares, or two millions of dollars.

"A rigid examination will be immediately made, by order of the Directors, of the books and papers; and the results when accurately ascertained, will be made public.

"In the meantime the transfer books are closed by order of the Board.

"By order of the Board of Directors.

"W. W. BOARDMAN, President *pro tem.*

"New York, July 5, 1854."

The discovery of the false issues was, we understand, brought about in this wise: Mr. Ketchum, one of the Directors, went to the office of the Company, on Monday, for the purpose of making some inquiry in regard to the late movement in the Stock. In a conversation with the book-keeper, his suspicions were excited, and after further inquiries he ascertained from the book-keeper that about 19,000 shares of the Stock had been transferred by Mr. Schuyler, as Transfer Agent, to R. & G. L. Schuyler, and by them hypothecated for loans.

On the Thursday previous to Mr. Ketchum's inquiries at the office, which led to the discovery, Mr. Sturgess had been looking over the transfer book to see who was selling stock at such low prices, and afterwards asked to see the stock ledger. The book keeper declined to give him access to it, under a general order from Mr. Schuyler not to show the stock ledger to any one. Mr. Sturgess' request was afterwards communicated to Mr. Schuyler, who soon left the office, and has never returned, and it is understood that instead of being dangerously ill at his house, as reported, he had fled from the city.

The system of issuing certificates adopted by this company, requiring only the signature of Mr. Schuyler as transfer agent, has been much commented upon in the street to-day, and universally condemned as throwing open the door for an easy fraud, and placing great temptation in the way of one man.

This, as we have related, had already been discovered the same morning by the examination of the books. The transfer books have been closed, and no transfers were allowed to-day. The stock will probably be called in in order to discover the full extent of the over issue and the disposition of it. It was currently rumored that Com. Vanderbilt had a half a million of this stock as collateral from Mr. Schuyler, but we understand that he has only 1,300 shares, the remainder of his large loan to Mr. S. being secured by other collaterals. The above are the exact facts in regard to this most unfortunate affair, as far as they have been developed.

In regard to the liability of the company for the false stock, there seemed to be but one opinion in the street, that they must assume it. This would give a capital stock of about five millions, instead of three millions fixed by the charter. The Directors have been in session all day, as also those of the Harlem Company, but we heard of no important action excepting the closing of the transfer books of the New Haven Company. The Directors of the New Haven Company have as yet had no interview with Mr. Schuyler.—*N. Y. Tribune.*

THE PROCESS OF COINING GOLD.

An United States mint has been completed in San Francisco, and is probably ere this time in active operation, coining down daily vast treasures of golden ore. It was intended that it should be prepared to coin thirty million dollars yearly. The following description of the system which is about to be established there, will afford a good general idea of the ordinary process of coining gold.

The metal, after being received in the deposit room, is carefully weighed and a receipt given. Each deposit is then melted separately in the melting room and molded into bars. These bars next pass through the hands of the assayer, who with a chisel chips a small fragment from each one. Each chip is then rolled into a thin ribbon, and filed down until it weighs exactly ten grains. It is then melted in a little cup made of calcined bone ashes, and all the base metals, copper, tin, etc., are absorbed by the porous material of the cup, or carried off by oxydation. The gold is then boiled in nitric acid, which dissolves the silver which it contains and leaves the gold pure. It is then weighed and the amount which it has lost gives the exact pro portion of impurity in the original bar, and a certificate of the amount of coin due the depositor is made out accordingly.

After being assayed, the bars are melted with a certain proportion of silver, and being poured into a dilution of nitric acid and water, assumes a granulated form. In this state the gold is thoroughly boiled in nitric acid, and rendered perfectly free from silver or any other baser metals which may happen to cling to it. It is next melted with one-ninth its weight of copper, and thus alloyed, is run into bars, and delivered to the coiner for coinage. The bars are rolled out in a rolling mill until nearly as thin as the coin which is to be made from them. By a process of annealing they are rendered sufficiently ductile to be drawn through a longitudinal orifice in a piece of steel, thus reducing the whole to a regular width and thickness. A cutting machine next punches small round pieces from the bar, about the size of the coin. These pieces are weighed separately by the "adjusters," and if too heavy are filed down—if too light they are re-melted. The pieces which have been adjusted are run through a milling machine, which compresses them to their proper diameter and raises the edge. Two hundred and fifty are milled in a minute by the machine. They are then again softened by the process of annealing, and after a thorough cleaning are placed in a tube connecting with the stamping instrument, and are taken thence one at a time by the machinery and stamped between the dies. They are now finished, and being thrown into a box, are delivered to the Treasurer for circulation.

The machinery, of course, for all these processes, must be of the nicest kind. The weighing scales alone, in the deposit room of the California Mint, cost $1,000.—*Boston Journal.*

An Engineering Establishment Afloat.

It may, perhaps, interest some of our readers to know of a very judicious step which the Admiralty have taken to provide speedy means of affecting repairs of the machinery of any of the engines of the Baltic fleet, by equipping the Volcano, steam-frigate, as a complete Engineers' workshop, to attend to the fleet in the Baltic, and carry the workshop along side of any ship requiring repairs of the machinery, and so effecting such repairs with all promptitude. By the judicious arrangements of the Surveyor of the navy, Sir Baldwin Walker, the deck of the Volcano has been lowered so as to yield a most spacious workshop, 10 feet high from the floor to the roof, 104 feet long by 30 feet wide, in which are placed, in most convenient arrangement, a 12 horse power independent steam engine, two boilers to supply power and motion to the various machines, and tools, forming the equipment of this floating workshop; which tools and machinery consist of one powerful turning lathe, and three others of graduated capabilities, two planing machines, two boiler-plate punching and shearing machines, four drilling and boring machines, two bolt-screwing machines, one steam hammer, with four forges, one cupola capable of executing any casting in brass or iron up to 30 cwt., with its appropriate foundry apparatus and material, a blowing fan to supply blast to the forges and foundry cupola; together with grindstones, anvils, vices, and all the minor implements of a very complete and efficient engineer's establishment, which there can be no doubt, will prove of the utmost value and importance to the service. Mr. James Nasmith, of Patricroft, has been entrusted by the Admiralty with the equipment of the Volcano, the machinery for which is being fitted to the vessel, now lying for that purpose in the Royal-dock yard, Woolwich, and will be ready for sea and service in a few days.—*London Times.*

RAILROAD FROM DALTON TO JACKSONVILLE.—A charter, very liberal in its provisions, was obtained at the last session of the Legislature of Alabama, and also simultaneously from the Georgia Legislature for the portion in that state.

A quorum of Alabama Commissioners opened books of subscription for the $50,000 of stock required previous to the organization of the company. The amount was immediately taken.

As a connecting link between the East Tennessee and Georgia Railroad, and the Alabama and Tennessee Railroad, this line is almost perfectly straight for the distance of about 80 miles, over the very best ground for building a road. When finished it will certainly make Dalton one of the most important places in the South-West, as it will be situated at the crossing nearly centrally of the two most extensive systems of railroads in the Union; and for Jacksonville, we hesitate not to say, that it is the most advantageous and important connection that could be made.

MONETARY.

At the East we have no change to note in Monetary affairs, except an increased feeling of distrust among capitalists, caused by the recent startling developments of fraudulent transactions in the Stock market by Mr. Schuyler, the particulars of which, as far as known, are given elsewhere in our columns. This distrust will continue until the full extent of the fraud perpetrated shall have been satisfactorily ascertained; new developments are being made daily, and enough has been already discovered to amount to $2,500,000. Mr. Schuyler has disappeared, it is not yet certainly known in what direction, though Canada is supposed to be his present abode. The great confidence heretofore reposed in Mr. Schuyler, and the respectability of his family and connexions, have made these developments the more startling. In our next we will give the particulars more fully, as by that time rumors will have given place to facts.

The Stock Market is very much depressed, and railroad securities can scarcely find purchasers at any price. This depression has caused the failure and suspension of a number of houses heretofore considered among the best. The following have already been reported: Robert Schell, endorser for Schuyler to the amount of $750,000, failed; Delany, Iselin & Clark, suspended; Wiles & Co., heavy Boston Bankers, failed.

Advices more recent than the above, give a somewhat better aspect of affairs, but not materially so.—Messrs. Delany, Iselin & Co., were to resume payment on the 11th.

The sales have been as follows:

By A. H. Nicolay, July 3d—

$5,000	Cleve. & Pitts. 7s. conv. '73	$80 00

880	Int. Bond, State of Ills., new Int. Imp. 6s. '77	60 50
50	Shares Del. Lack. & West. RR. Co	84 50

We notice an advertisement under date of June 10, 1854, signed by Samuel A. Bissel, County Judge of Cedar County, Iowa, cautioning the public against negotiating the bonds issued by the county of Cedar, Iowa, in aid of the Lyons, Iowa, Central Railroad; which bonds were declared *invalid and void* by the District Court, in May last, and the County Treasurer forbidden to pay the same, or interest thereon. We notice quite a number of the bonds have been sold in New York.

At the West there is no improvement in Money affairs. Capital is in good supply, and accumulating; but confidence is wanting, and until this is increased we cannot hope for ease in the Money Market. Number one names rate at 10@12 ₱ cent. per month. Railroad securites go begging. In the Stock Market there is but little doing, and prices are down to the lowest notch.

TO BUFFALO, NIAGARA FALLS, BOSTON AND NEW YORK,

VIA

Cincinnati, Hamilton and Dayton,

AND

Mad River and Lake Erie Railroads!

FARE REDUCED!

ONLY FOUR DOLEARS FROM CINCINNATI TO BUFFALO ! !

SEVEN HOURS RAILROAD RIDE

FROM CINCINNATI TO THE LAKE.

ONLY ROUTE FREE FROM DUST!!!

FOUR DOLLAR TICKET GOOD ON ALL TRAINS.

☞ Hamilton and Dayton Railroad the first to reduce the Fare.

Passengers leaving on 6 A. M. Train have three hours at Dayton.

Through from Cincinnati to Sandusky without change of cars.

Baggage checked to Buffalo.

Depot in the west end of the city, on Sixth street.

☞ Cheapest and most pleasant route between Cincinnati and the Eastern Cities.

Passengers leaving Cincinnati by 8.20 Morning Train, on Cincinnati, Hamilton and Dayton Railroad, arrive at Sandusky at 4 P. M., and go immediately on board the splendid and gorgeous steamers,

ST. LAWRENCE.....Capt. Mead.
MISSISSIPPI.....Capt. Hazard.

And arrive at Buffalo next morning, after a refreshing night's sleep, in time for early trains to Niagara Falls, New York, Boston, etc., arriving in New York in time for supper.

The roads composing this route from Cincinnati to the Lake are laid throughout with heavy T rail, and in construction of track, rolling machinery, comfort of cars, and general management, and almost entire freedom from dust, are not surpassed by any in the West. It passes through the densely populated and highly cultivated valleys of the Great Miami and Mad Rivers, also, running through the large and beautiful towns of Hamilton, Dayton, Springfield, Urbana, Bellefontaine, Kenton, Carey and Sandusky.

The Steamers of this Line were built expressly for comfort, safety and speed, and no efforts will be spared to render comfortable those who may patronize them.

By this route passengers have four or five hours daylight on the Lake. Each boat is provided with splendid hands, for the especial accommodation of pleasure travelers, and every facility is afforded to dancing parties.

Reserved State Rooms will be telegraphed for, by passengers leaving their names at the Ticket Offices.

The following rates of Fare includes Meals and State Rooms on Lake Steamers.

FARE.

jy.13.

Wabash Valley Railroad Company.

NOTICE TO CONTRACTORS.

SEALED proposals will be received at the office o Alton, McGrady & Co., Vincennes, Ind., until the 25th of July, 1854, for the grading, bridging, masonry, furnishing cross-ties, and laying the track of the entire line of the Wabash Valley Railroad, extending from Vincennes, Ind., to Paris, Ill., a distance of sixty-six miles.

Plans, profiles and specifications are ready at the office of Allen, McGrady & Co., Vincennes, and also at the office of the Company, Marshall, Ill.

The line passes through a densely populated and highly cultivated country, affording every facility for obtaining supplies, and conveniences for carrying on the work.

The work is of an exceedingly favorable character and well worthy the attention of experienced contractors.

Contractors are especially rsquested to give the work personal examination before submitting their propositions.

The work will be divided into soctions of abont one mile each for the convenience of contractors, and bids will be received for the whole or any portion of the work, reserving the right to reject any or all propositions if deemed unreasonable.

Bids will also be considered for the payment of the work to be either all cash or part cash and part stock.

To Railroad Contractors, Quarry Men, &c.

THE attention of those interested is called to ASH'S IMPROVED HORSE POWER ROCK DRILL, for Railroad Excavation, Stone Quarrying, Well Boring &c.

This Drill is worked by HORSE POWER, requiring but one horse and one man, to keep it constantly at work, with great ease and velocity, performing 60 strokes per minute. It is cheap of construction and repair. The AUGER weights from 300 to 500 pounds, will drill a perpendicular or inclined hole FOUR INCHES IN DIAMETER, at the rate of from 8 to 16 feet per day in ordinary lime stone. It has drilled 2 feet in one hour.

For rights to use for Counties or States, apply to the Patentee. WILLIAM F. ASH,
May 20, 3* Springfield, Ohio.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York, And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

J. B. FORD is the Company's Receiving Agent at Wheeling.

"GARDNER'S ROCK DRILL."

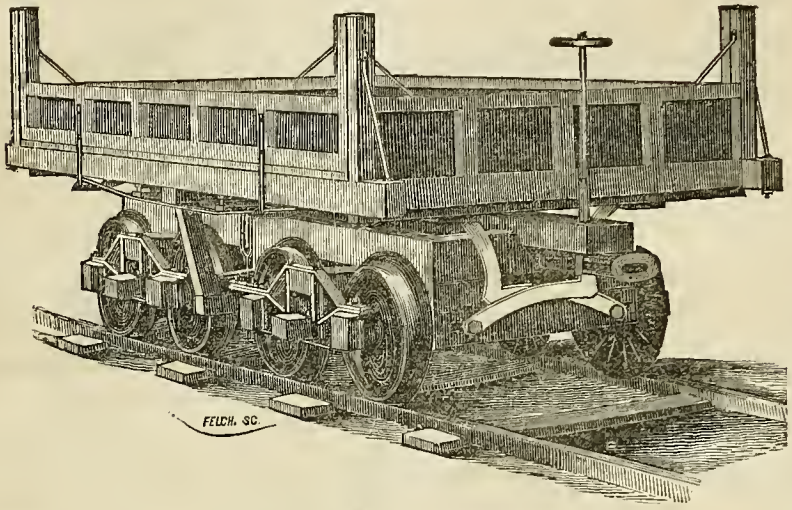
DESIGNED for Mining, Tunneling, Quarry Use, and Rock Excavations of all descriptions, by use of which a saving of 50 to 75 per cent, is made. This drill can be operated by hand, horse or steam power A Machine is now in operation at the Crystal Palace.

Applications for Territorial Rights and Machiues must be made to the Patentee.

G. ARTHUR GARDNER,
nov.17† Trinity Building, New York

BAILEY'S PATENT DUMPING CAR.

Fig. 1.



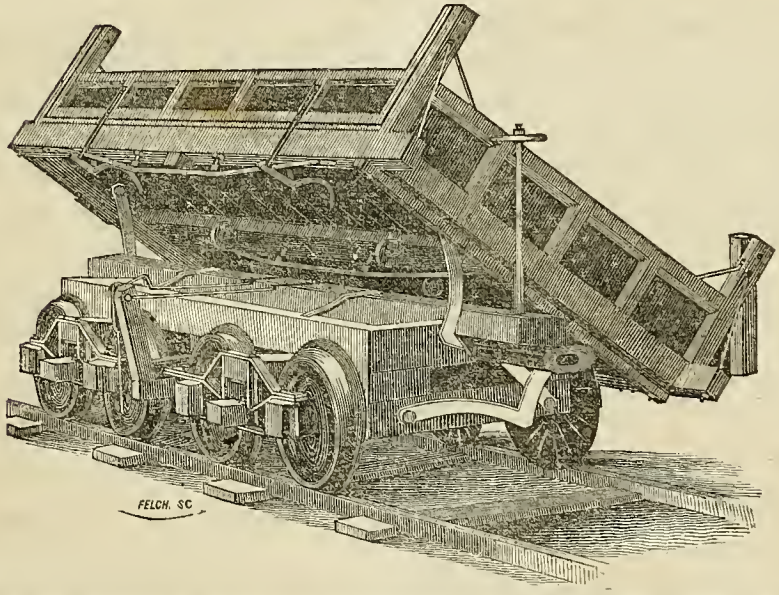


Fig 2.

The above engravings are views of a most important improvement in Railroad Dumping Cars. A patent was granted to C. P. Bailey for the improvement, January 24th, 1854.

Fig. 1 is a view of the car ready to receive the load.

Fig. 2 when dumped, or the load discharged.

This improvement has been in use on the Central Ohio Railroad for several months; also, on the Cincinnati, Hamilton & Dayton; Cleveland, Zanesville & Cincinnati; Cleveland & Columbus; and other Railroads in this state. Also upon the Illinois Central, in Illinois.

The improvement consists mainly, in the adoption of the Wrought Iron Transverse Bars, instead of the Cast Iron Rockers, generally in use. There are, however, other details of importance.

The box or body of the car rests on the ends of the Transverse Bars, whose other and lower ends are attached to the frame of the truck; two of the (wrought iron) bars are used at each end of the cars, to support and operate as guides in dumping the car. This improvement can be applied equally as well to the four-wheeled as to the eight-wheeled car.

One man will dump this car with ease when loaded, in less time than ten men can dump the rocker car, (the long or eight wheeled car is alluded to.) Contractors who have been using it, state that in graveling roads, **it is a saving of two cents per yard,** over the rocker car—that it is a much safer and easier car to manage, preferring it to any other car now in use for similar purposes.

Its liability to get out of repair is not one-tenth that of the Rocker Car. It is also well calculated for carrying and unloading Coal, Lime, Plaster, and all such materials as are carried in Dumping Cars—giving greater inclination in dumping, and discharging the load with greater facility than any other car.

The attention of Railroad Companies wanting Gravel Cars, as well as Coal Cars, is respectfully solicited to this improvement. The cost of this car does not exceed that of the Rocker Car,

To Railroad Companies and Car Builders who wish to purchase Rights, or wish information on the subject, letters addressed to me at Columbus, Ohio, will receive immediate attention.

GEO. L. CHASE.

Columbus, Ohio, June, 1854. Sole Agent for the United States.

TESTIMONIALS.

Engineer's Office, C.O. R. R.
Zanesville, Ohio, Nov. 21st, 1853.

Charles P. Bailey, Esq.,

Dear Sir:—At your request, some two months since, I caused to be placed on this road two of your newly invented Gravel or Dumping Cars. From what I have seen of their work I am clearly of the opinion that they will soon supercede all others of the kind now in use.

We have had the long car filled to its utmost capacity with the various kinds of excavation, and placed it in every position, and one man would dump it with ease in ten seconds, whereas, with the ordinary Rocker Car, it takes ten men one minute to perform the same labor.

The Car is simple in construction—not liable to get out of repair, as there is but little cast-iron about it. It tips to a greater angle than the ordinary car, therefore leaving its load in a better shape. I have no hesitation in saying that when more cars of the kind are wanted on this road they will be built after your model.

Wishing you every success in your undertaking, I remain, with great respect,

Yours, &c.,
GEO. T. CLARKE,
Chief Engineer.

I have purchased for the use of this company, two Gravel Cars, built after the plan of Mr. Bailey, and fully agree in the opinion above expressed.

HENRY O. AMES,
Sup't Cin., Ham. & Dayton Railroad.

I fully agree in the statement made by the gentlemen in this letter, and may also state that they are the best Gravel Cars ever built, in my opinion.

DANIEL McLAREN.
Mast. Machinist Cin., Ham. & Dayton Railroad.

Zanesville, Dec. 21, 1853.

Charles P. Bailey, Esq.,

Dear Sir:—From an experience in using your Improved Dumping Car, we have no hesitation in saying that two cents per yard is saved, (in labor and time) by using your car instead of the present Rocker Car.

That the repairs incidental to your car are not one-tenth of what they are on the Rocker Car.

That it is much the most profitable car for contractors as well as the safest one for laborers to use, being easier to handle.

We consider it superior, in every reapect, to all other cars of the kind now in use.

Yours, truly,
E. NEWCOMB,
C. BARRET.
Cont'rs for grav. East. Div. C. O. Railroad.

I have seen the car above referred to at work, upon the Eastern Division Central Ohio Railroad, and fully concur with the opinion of Messrs. Newcomb & Barret
E. B. DUVAL,
Mast. Machinist, Central Ohio Railroad.
Zanesville, December 21, 1853.

Zanesville, Dec. 22, 1853.

Mr. C. P. Bailey,

Dear Sir:—As you desire my opinion of your Improved Dump or Gravel Car, that has been in use for the last three months on the Central Ohio Railroad, I do not hesitate to recommend it as being the best plan for a Gravel or Dump Car I have ever seen. The hills for repairing Dump Cars, such as are now in general use, it is well known, constitute a serious item of expense. On this account alone, your plan deserves a preference over all others, as there is but little liability about your car to any such accidents as are constantly occurring to the others. It dumps to a greater angle, and one or two men can dump it in less time, and with greater ease than the ordinary Rocker is dumped by ten or twelve men.

It will give me pleasure to recommend it as superior to any improvement of the kind in use.

ROBERT MACLEOD.
Chief Engineer, P. M. & C. R. R.

At a meeting of the Ohio Association of Railroad Superintendents, held at Cincinnati, March 8, 1854, the Committee appointed to examine Bailey's Pateut Dumping Car,

REPORT,

That they have examined the Car, and consider the improvement a valuable one; and would recommend to any members of the Association who may need Gravel Cars, to examine and test this Car, before purchasing elsewhere.

W. H. CLEMENT,
For the Committee.

Clev Col. & Cin. and Clev. & Erie R. R.
Supt.'s Office, Cleveland, O., Apr. 24, 1854.

Mr. Charles P. Bailey,

Dear Sir:—Two of your Patent Dumping Gravel Cars have been used on the Cleveland, Columbus & Cincinnati Railroad for several weeks, and I am so well satisfied that they are better than any others, that I have just ordered thirty more of the same sort,

Respectfully,
L TILTON
Supt.

TYLER DAVIDSON & CO.,
Agents for the
BOSTON BELTING COMPANY!

India Rubber Machine Belting in any quantity, from 2 to 20 inches.
India Rubber Steam Packing;
Mixed do do 1-32 to ¼ inch thick.
Plain do do 1-32 to 1 inch thick.
Pure do do
Pipe and Manhole Rings, all sizes;
Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agents of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations.—This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils, -10 casks, assorted weights now in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co.'s C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft

Cross Cut Saws.—Hoe & Co.'s C. S., Johnockerell's C. S. and G. S., Wm. Rowlaud's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet Also, 4 and 4½ feet Tennon Saws.

Axes.—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

For sale by TYLER DAVIDSON & CO.,
mr 3 140 and 142 Main street

Being practical workmen ourselves, we feel confident that we can furnish the West and South with as good an article and cheaper than can be bought East.

Cincinnati, June 29, 1854.

WINSLOW'S
PATENT COMPOUND RAIL.

THIS RAIL, which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a

THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are—a saving in the wear and tear of Machinery—it saves, to a great extent, in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable Being practically a continuous Rail for the entire length of the road, without break at the ends of bars, the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effects upon Cars and Machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at Hanging Rock Iron Works, upon the Ohio River, and at Mt. Savage Iron Works, Maryland. Specimens of the Rail and patterns of the same will be gladly shown, as well as information in relation thereto, given by application to

MUSKINGUM WORKS,

ZANESVILLE, OHIO.

DOUGLASS, SMITH & CO.

WOULD respectfully call the attention of Railroad Companies to their establishment at Zanesville

They aro prepared to execute orders, on short notice, for

Passenger Cars of the most superior description,

Second Class Passenger, Mail Express, and Baggage Cars; Freight, Cattle, four or eight wheeled Gravel Cars.

We manufacture a superior

CAR WHEEL,

Over 2500 of which aro now running on tho Central Ohio Railroad, and many of these have been in use on the road over two years, having in that time only three to crack, and two to ho renewed in consequence of the wearing of the Chill. We have also commenced the manufacture of the celebrated

WASHBURN WHEEL,

And are prepared to furnish this wheel. with or without axles. Also, castings for Cars fitted to order at tho shortest notice.

BOLLMAN'S PATENT IRON & WOOD BRIDGE.

We are also agents and builders of the above celebrated Bridge. Are now placing upon the piers an iron bridge on this plan over the Muskingum river at Zanesville. We are ready to contract with companies for the coostruction of this Bridge. All orders addressed

DOUGLASS, SMITH & CO.,
au4tf. Muskingum Works, Zanesville, O.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Reservoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

Tho business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of tho times.

Models and Testimony of the above Boxes, may be examined, and arrangements may he made for the right to use tho same, with tho subscriber.

WILLIAM SHERBURNE,
PRINCIPAL AGENT,
May 18.6* Office, No. 167 Broadway, New York.

Railroad Line.

Cincinnati, Hamilton & Dayton Railroad.

Summer Arrangement.

COMMENCING WEDNESDAY, JUNE 20th, 1854. TRAINS will run by standard time, which is sevou minutes faster than that of Cincinnati.

First Train

At 6 o'clock, A. M., Lightning Express for Dayton, Crestline, Pittsburgh, Philadelphia and Baltimore.

Second Train

At 6.10 A. M., for Hamilton, Richmond, Indianapolis, Terre Haute, Lafayette and Chicago, direct.

Third Train

At 8.20 A. M., for Dayton, Sandosky, Toledo, Detroit, Chicago. Cleveland, Buffalo, New York, Boston, Pittsburgh, Philadelphia, Baltimore and Washington.

Fourth Train

At 2 P. M. for Dayton, Greenville and Union.

Fifth Train

At 3.30 P. M., for Hamilton, Richmond, Indianapolis, Terre Haute, Lafayette and Chicago.

Sixth Train

At 5 P. M., for Dayton, Troy and Piqua, and intermediate stations.

Seventh Train

At 6.30 P. M., for Hamilton and intermediate stations.

The 1st Train, Express,

Will stop only at Hamilton and Middletown.

2d, 3d, 4th, 5th and 6th Trains,

Will stop at all regular stations.

The Seventh Train

Will stop at all way and flag stations.

The 1st Train

Will connect at Crostline at 12.30 P. M., with the Ohio & Pennsylvania Train for Pittsburgh, Philadelphia, Baltimore, etc., forming a direct and continuous line for each of these cities. Cars run through to Crestline without change. Baggage checked to Pittsbugh.

2d Train

Will connect at Richmond at 9.05 A. M., with Train of Indiana Central Road for Indianapolis; arrive at that place at 12 M., thence to Terre Haute, Lafayette, or Chicago without detention. Time as short as by any other route.

3d Train

Will connect at Dayton at 10.45 A. M., with Mad River Train, and arrive at Sandosdy at 4 P. M., and go immediately on board the splendid steamers **St. Lawrence** and **Mississippi**, to Buffalo; thence at 7.30 A. M., with Buffalo and N. Y. City Road, to New York; arriving at that place at 10 P. M., also at Crestline 4.20 P. M., with Ohio and Penna. Train for Pittsburgh, Philadelphia, Baltimore and Washington.

The Same Train

Will also connect at Clyde with Cleveland and Toledo Train to Toledo, Chicago and intermediate points; and at Sandusky at 5 P. M., with steamer **Bay City**, for Detroit. Also, with Dayton and Michigan Railroad to Troy and Piqua, and at Piqua with Doyle & Co's Canal Packet Line to all points on Wabash and Miami Canals.

Fourth Train

Will connect at Dayton with Dayton and Greenville Railroad to Greenville, Union, and all points on Bellefontaine and Indianapolis Railroad.

Fifth Train

Will connect at Richmond at 6.40 P. M., with Indiana Central Train for Indianapolis, Terre Haute, Lafayette.

Passengers will bear in mind that the following rates of fare, via Lake Steamers, include both Meals and Staterooms, and that the fare to Philadelphia and Baltimore is One Dollar cheaper, and one less change of cars than by the Columbus route.

TESTIMONIALS:

OFFICE OF THE G. & C. U. RAILROAD CO.,
CHICAGO, FEB. 20TH, 1854.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—All of the principal station buildings on this road are furnished with your Depot and Platform Scales, with the exceptions of two scales. Your Scales were adopted after trial with those of other makers, and I take pleasure in now saying, that after more than four years trial, they have given entire satisfaction to us, and the public doing business with the Company.

I am not aware of a dollar's expense being incurred from wear or defect of materials in any part of the scales. The Track Scale, with suspended platform, which you have recently put into our principal depot at this place, judging from present appearance and the use to which it has been put, will, I doubt not, answer the purpose desired, and be equally satisfactory.

JOHN B. TURNER,
Pres't and Sup't.

CENTRAL RAILROAD CO.,
SAVANNAH, JAN. 6TH, 1853.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.

DEAR SIRS:—Your Scales, which we have used for many years, gave so much satisfaction, that we ordered from your House, all the Scales necessary for our large new Warehouse. Your agent has just finished putting up twenty-two of your No. 1 and No. 2 Depot Scales and a large Road Scale, and I am pleased with the manner in which the job has been done. I trust and believe that this work will do credit to your establishment.

Respectfully, your obedient servant,
R. R. CUYLER, Pres't.

PORT RICHMOND, PA. MARCH 2D, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.,

GENTLEMEN:—There are now in the Richmond Wharves at the terminus of the Reading Railroad, Twenty-six of your ten ton Track Scales, which have been in constant use for more than six years. The least quantity of Coal weighed annually upon any one wharf has been 400,000 tons. The aggregate quantity weighed upon the twenty-six scales, has been more than one million two hundred thousand tons per annum.

During the time since they have been in use, they have always retained their adjustment without any expense for repairs. They have been tested every year by the Sealer of Weights for the county of Philadelphia, and always found correct, and at the present time their operation is apparently as perfect and as sensitive as when first built.

JOHN E. HOBERT,
Superintendent of Wharves.

STATE OF NEW YORK,
CANAL COMMISSIONERS OFFICE,
ALBANY, JUNE 21, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—Your favor of the 10th, asking my views of the Weigh Lock Scales, manufactured by you, and introduced upon the Erie Canal, is received.

I have no hesitation in saying, that they have fully answered your recommendation in every particular. Their capacity for strength is fully equal to sustain the required burthen. They are not liable to get out of adjustment or repair. The arrangement of the Weighing Beam is admirably adapted to obtain rapid results. I know of no Scale superior to them, in this or any other country.

In great haste, Yours truly,
JOHN C. MATHER,
Canal Commissioner.

PORTABLE SCALES.

The following Railroads have been furnished exclusively, or nearly so, with FAIRBANKS' SCALES:

INFLUENCE OF RAILWAYS ON THE INCREASE OF CAPITAL AND THE FACILITIES OF COMMERCE.

In our last article upon this subject, we demonstrated that when a railway was finished, (allowing for a diminution of 30 per cent. on the capital of the railway,) it still added to the *capital* of the country, and that *immediately*, more than double its cost. There is not a finished railway in the Northwestern states of which this is not absolutely and demonstrably true. How, then, have railways taken from the *capital* of the country? The idea is preposterous, and only proves a total want of reflection on the first principle of political economy. But, it may be said, this is fixed capital and does not give commercial facilities. Lands are fixed capital, but railway stocks are not fixed. On the contrary, they are personal property, and a marketable article. But, let us consider a railway only in the light of a commercial machine, and see what reason there is to charge it with an absorption of capital.

There are three important elements of commercial prosperity in a railway:

1. The diminution of time in carriage and certainty of obtaining goods.

2. The diminution in the cost of carriage.

3. And the diminution of interest, by diminishing time.

Now, in the consideration of these elements it must be remembered as a fundamental truth, that *whatever diminishes the capital necessary to do a given amount of business*, really increases the whole capital of the country; for, if an individual can do the same business with less money, he can either increase the business or accumulate a surplus.

Let us try then to form some estimate of what the Western states have gained in capital, by the railways, in commercial transactions. We can do this only by approximation. Let us take Cincinnati as our example. In the first place, we must remember, that the first month a railway was finished between Cincinnati, Cleveland, Buffalo and New York, it forced all other modes of transportation to conform to it, as far as they could and live.—The light and perishable articles, such as dry goods, butter, and various other articles left the Erie Canal, and in spite of all that has been said about the superiority of canal navigation, *the tolls were forced down* on the great canals of New York and Ohio. The result

is that not only time is diminished, but the cost of transportation. It must be remembered, too, that the goods which come down the river, have come to Pittsburg and Wheeling over the Pennsylvania and Baltimore railroads. What has been the effect on the *capital*, for example, of a dry goods or fancy merchant? If A, ten years ago, employed $10,000 capital in purchasing goods in New York and Philadelphia, twice a year, as was the custom, he can now do precisely the same business, on *one-fourth* the money, by buying frequently in small quantities; and he *does so avail himself* of these facilities. What else mean the immense piles of goods daily received by railway at the Express offices?—The fact is palpable, and well known to men of business. The result is that A, who ten years ago did business to the amount of $30,000, on a capital of $10,000, has been able to extend it to $100,000, and that, too, without the least danger, by turning over his stock frequently. Not only this, but by making six profits where he made two, he has doubled his own capital. If this were not so, let any man answer how Cincinnati, with almost no bank capital, is building splendid structures, private and public; her merchants accumulating fortunes, and extending trade; and all branches of business increasing in prosperity? We shall not now enter into details, but simply affirm that in the last ten years, the merchants of Cincinnati have increased their active capital full *ten millions of dollars* by means of facilities afforded by railroads, in getting goods frequently, certainly, and extending the *radii* of sales. This has been just as efficient in aiding commerce as would have been ten millions of bank capital, which there ought to have been, but which has been denied by the tyranny of legislation.

Next, look to the *diminution of the cost of carriage*. This amounts to $1 per cwt., between Cincinnati and New York. This is $1 per cent. gained to the merchant on his merchandize, and to the farmer on his produce. There is a clear gain of $8 on every fat steer; 1 cent per lb. on coffee, and more or less on all sorts of transported products or merchandize. What will this amount to for Cincinnati, or for the state of Ohio? The merchandize, coffee, tea, liquors, fish, etc., nearly all of which are brought from the East, amount to at least 100,000 tons, upon which railways have diminished the cost of carriage $2,000,000. The products sent from Ohio exceed 500,000, tons and the cost of its transportation has been reduced $10 per ton, or in the aggregate full $5,000,000 per annum. More detailed statements would increase these amounts; but at any rate, not less than *seven millions of dollars per annum* have been saved to this state, by its seventeen hundred miles of railway. It is every dollar a *clear gain*, for the merchant saves it on what he must have paid, and if he did not pay, the consumer of goods must, so the farmers add the gain in transportation to the price of produce, for it must be remembered *that the price of products does not fall in the Eastern markets*; on the contrary, the increase of the currency has increased prices, and all the reduction of freight has been thrown into the pocket of the farmers.

Lastly, let us look at the *diminution of interest* by the diminution of time in transportation. This is not so large an item as the others, but it is a very considerable one. For example, A bought, spring and fall, $10,000 wurth of goods on six months credit. Now to do the same business he need buy but $3,350, six times in a year. By this operation he reduces his interest $200 per annum, and on double that business, it would be equivalent to his house rent. On the whole mercantile transactions of Cincinnati, the railways connecting her with New York, Philadelphia, Boston and Baltimore, have reduced her interest $600,000 per annum.

Approximately, we have then this result: that in the diminution of the cost of transportation, in the gain in time and in the diminution of interest, Cincinnati gains by railways at least $2,600,000 per annum; and the state of Ohio nearly $8,000,000 per annum. How, then, stands this question of the absorption of capital by railways? In the aggregate about thus:

Railway investments in Ohio	$50,000,000
Market value	35,000,000
Increased value of lands	51,000,000
Annual gain in transportation $5,000,000 which is interest on	100,000,000
Annual gain in interest $1,000,000, which is interest on	15,000,000
Aggregate value	$201,000,000

Deduct the original cost, and we have a *clear gain of capital to the extent of* $151,000,000.

Try this estimate by any other test that can be applied, and it will be found to be within limits. Take, for example, the valuation of the state. In three years, three hundred millions have been added to the assessments of the state, and the assessments are under valuation. Take Cincinnati as an example. In five years her commerce has doubled. What has done it? Her bank capital is constantly diminishing, and her rates of interest are enormous. What has sustained her? But for the extension of her trade through the interior, by railways, the tyranny of legislation and the equally bad municipal management would almost have crushed her. The vastly enlarged facilities for trade, and also of manufactures, have borne her triumphant through the conflict. Whence, then, originates the absurd idea, that railways have absorbed commercial capital? Railways alone have saved the commercial community from bankruptcy. Whence, then, comes this cry? This is it—Railways, as well as increased currency, have *immensely increased the business of the country*. Hence, more money is required for a greatly enlarged business. Then extravagance, to a most foolish extent, has taken possession of the wealthy classes, and that demands money. Then comes a pressure. There is overtrading, export of specie, high rates of interest, and some failures. Somebody must be blamed. Who? The most prominent, active and public body is a railway, and he is charged with *doing too much*. It is the old Jack Cade cry of put down the men with the ink horns, because they can write; and arrest the progress of railways, because *they make too much business!* When you cease to make railways the goose that laid the golden egg will be killed.

Railroads.

MICHIGAN SOUTHERN & NORTHERN INDIANA RAILROAD.

In the New York *Tribune* we find the following memoranda relative the work on the new lines of this road, together with a statement of estimates, assumed dividends, etc.:

The works upon the unfinished lines of the Michigan Southern & Northern Indiana roads are progressing steadily toward completion. About 15 miles of the Jackson Branch of the Michigan Southern Road have been some time completed; and the grading and track laying are proceeding without interruption upon the remainder. Of the Goshen lines of the Northern Indiana, from 30 to 40 miles are already completed. Seventy miles of the line extending west from Toledo will be done by the 1st day of September; the remainder of the line to Goshen is under contract to be completed by the 1st day of January, and will be done, we are informed, near that time.

These two unfinished roads—the Goshen line of the Northern Indiana, and the Jackson Branch of the Southern Michigan—make together 160 miles of new road. The estimated cost of these works is about $3,500,000.

It was originally intended to provide for this cost by an issue of stock to the amount of $1,500,000, and of mortgage bonus $2,000,000, of which $500,000 should be secured upon the Jackson branch, and $1,500,000 upon the Goshen line. The change in the market for railroad bonds since the commencement of these works, has rendered it impossible for the company to negotiate these securities upon satisfactory terms. The company having sold in all not to exceed $350,000 of the $2,000,000 of bonds, have preferred to withdraw the remainder from the market, and to provide by new stocks for the completion of their unfinished works. A portion of this stock was issued last summer; another issue was made in May last; and the balance has just been authorized and is to be distributed among the stockholders on the 1st of August next. This will complete the road and no more stock is expected to be created.

Upon the completion of these works, the company will have 465 miles of road, at an aggregate cost of $11,000,000, equal to about $23,000 per mile. The earnings upon the road now in use will probably reach $2,000,000 for the current year. Allowing 45 per cent. for operating and repairs, will leave $1,100,000 for the payment of interest and dividends. It is seen, therefore, that the line of road (315 miles) now completed, is actually

earning enough to pay interest upon all the debt the Company will owe and 10 per cent. dividends upon all the stock it will have when the whole 465 miles are finished. This calculation insures the stock at 10 per cent. investment, even if the 160 miles of new road were to be entirely unproductive. But so far from being unproductive, the new works will add much to the earnings of the company; and if the earnings reach $2,000,000 this year they will, it is estimated, be $2,500,000 to $3,000,000 the first year after these lines are completed and brought into use.

METROPOLITAN RAILROAD.

We have spoken of this road in one of our early numbers. From the *Baltimore American* we learn of its direction as follows; taken from the first annual report of the company:

The Baltimore and Ohio Road will find the Metropolitan to he a very great contributary to their road, and will doubtless favor its speedy construction for mutual benefit, as it is ascertained that the distance from Cleveland, on Lake Erie, to Washington, by the Cleveland and Pittsburg, the Connellsville, the Baltimore and Ohio, and the Metropolitan Roads, will be but 440 miles, while to Washington, via the Relay, near Baltimore, using the Connellsville road, it will be 485 miles, and by way of Philadelphia, as now traveled, 628, and by way of New York 860. This advantage to be gained by the Metropolitan road will induce much travel that now avoids Baltimore and Washington from the West to take those cities on the route to and from the cities of Philadelphia, New York and Boston, and without loss of time; for it is contemplated that passengers can reach Washington in twelve hours from Cleveland, in place of twenty-four as now. In connection with this subject it may not be amiss for the Board to state that already the Connellsville road direction have expressed an anxiety for the early construction of the Metropolitan road, as likely to be one of much benefit to theirs.

Again, it is found that the distance from Piedmont to Baltimore by the Baltimore and Ohio road is now 206 miles: deduct seven miles to he gained by a contemplated cut through Knobly mountain, we have 199 to Baltimore, or 190 to the Relay, or 221 to Washington; whereas, by the use of the Metropolitan road, it will be but about 175 miles from Piedmont to Washington, which is the same as from Piedmont to Alexandria, by the Alexandria, Loudon and Hampshire road, now under construction, the completion of which will place passengers in Washington in about 182 miles, in place of 221, as before stated, via Relay; so that, without the Metropolitan road, the Baltimore and Ohio road will not only lose the Washington passengers from Piedmont, but sustain a very great loss of coal trade from Paddytown, as that article can be sent to Alexandria for export by sea in 170 miles, in place of 200 to Baltimore as now.—But by the use of the Metropolitan road the Baltimore and Ohio road can retain all the travel on their road to within sixty-three miles of Baltimore, in place of losing so much of it at Piedmont. The same will apply to coal.

To Contractors.—The attention of contractors is called to the advertisement of the Wabash Valley road in our columns. The opportunity for a profitable undertaking is a good one. The country is healthy, and offers desirable facilities for operations.

MAYSVILLE & BIG SANDY RAILROAD.

From Mr. Stephenson, President of this company, we learn that work has been suspended along the line of this road; not, however, from any lack of means for its completion, but rather to await some definite action for the prosecution and completion of the Maysville and Lexington road, without which the Big Sandy road would be of comparatively little use.

The prospects of the Maysville and Lexington road are very gloomy. Money is scarcely to be had at any rates upon railroad securities at this time. Numerous expedients have been proposed to get the company out of difficulty; among others, and the most plausible, that the subscribers should increase their stock one-fourth, which would give means sufficient to complete the road. So important an undertaking ought not to be abandoned.

WABASH VALLEY RAILROAD, (ILLS.)

This road has been noticed in a previous number of the Record. It passes through the counties of Lawrence, Crawford, Clark and Edgar, which had an aggregate population in 1850, of 33,480—which has nearly, if not quite, doubled since that period, as vast numbers of emigrants from Germany, New England, Pennsylvania, and Ohio, have purchased lands and located in the counties thro' which the line of this road runs.

At Paris, it joins with railroads running to Indianapolis, Springfield, Chicago and Alton; and will connect with all the railways centering there. The people of these counties will by means of this road, have afforded them the choice of all markets; East, West, North and South.

The construction of the Wabash Valley Railroad has been placed under the superintendence of Messrs. McGrady, Allen & Co., whose advertisement will be found in our columns; and contractors who may bid for work on this road, can rest assured that they are dealing with high-minded, honorable men.

The Michigan Central Railroad Company.—Board of Directors for the ensuing year is as follows:

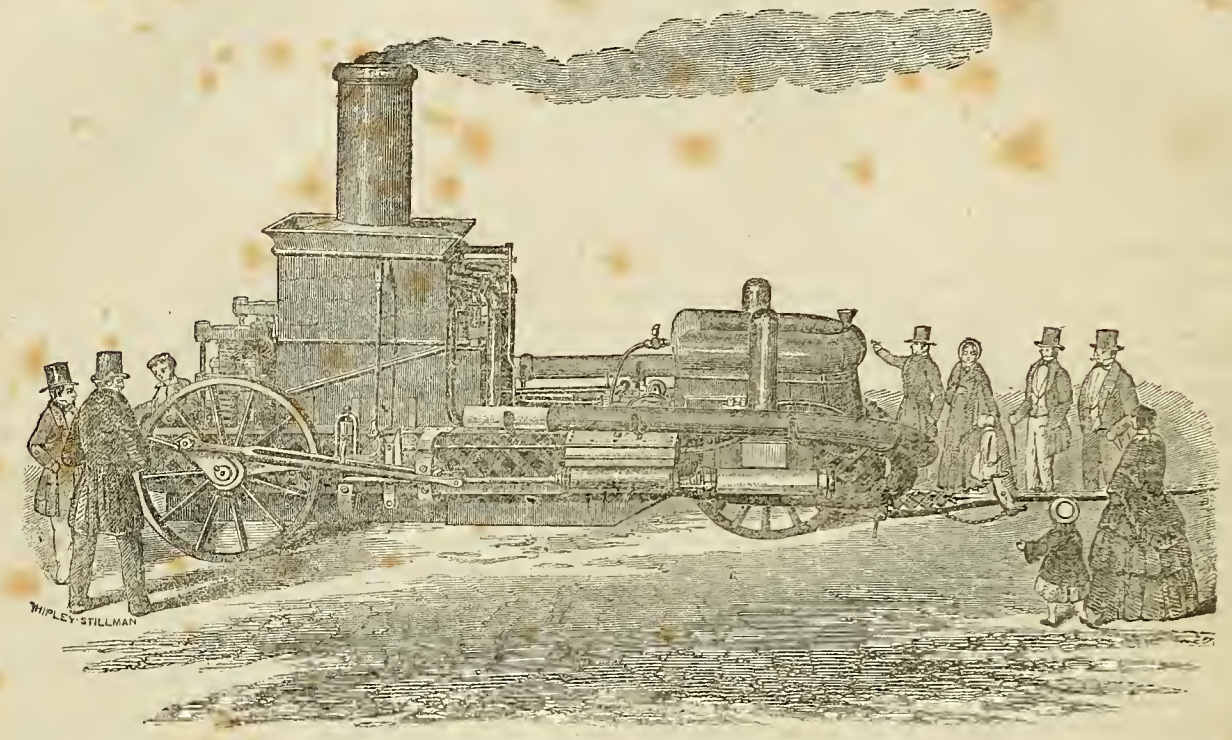
J. M. Forbes, Boston; D. D. Williamson, J. C. Green, New York; Erastus Corning, Albany; R. R. Forbes, G. P. Upton, J. E. Thayer, Boston; Elon Farnsworth, J. W. Brooks, Detroit.

The following gentlemen were elected officers of the Board—J. W. Forbes, President; J. W. Brooks, Vice President; Isaac Livermore, Boston, Treasurer.

☞ Mr. Stephenson's tubular bridge over the Nile, at Benha, will be fit to rank by the side of the imperishable monuments of ancient Egyptian industry. It is to have ten arches, and is to 870 feet in length.—Unlike the Brittania bridge, the railway will pass over the top.

Terrible Railroad Accident—Frightful leap of an Engine and Baggage Car.—Yesterday afternoon a terrible railroad accident occurred on the Ohio and Mississippi railroad, at a distance of about 15 miles beyond Lebanon, Ills. The construction train was passing out to the end of the road as far as it is constructed, laden with five or six car loads of heavy T rail, and when passing over the eight hundred or a thousand feet of trestle work, which crosses Shoal Creek Bottom, at about 4 o'clock in the afternoon, the timbers gave way and precipitated three or four of the cars, with a number of laboring hands, upon the ground—some fifteen or sixteen feet below. The smash up was terrible. Some fifteen or sixteen persons were badly injured, one of whom died a short time after the accident and was brought to Caseyville and buried last night. A boy was picked up from beneath some eight or ten of the heavy rails, but to the astonishment of all, was not very dangerously injured. He happened to fall in the mud the softness of which preserved his life. The locomotive escaped injury. When the engineer saw the trestle work begin to give way, he opened all the valves in a second, *which shot the engine clear over the falling timbers and also dragged over one or two of the baggage cars.* We have heard nothing as yet in regard to the persons hurt by the accident, but fear that fatal injuries have been sustained by many of them.—*St. Louis Intelligencer.*

Toledo & Indianapolis Railroad.—The first annual meeting of the stockholders of the Toledo and Indianapolis Railroad was held at Delphos, Allen county, and the following gentlemen elected Directors:



M. Johnson, Toledo; F. J. Lyle, Jr., Delphos; H. J. Bockmer, Fort Jennings; Dr. C. M. Godfrey, Kalida; A. J. Field, W. H. Raymond, C. B. Phillips and H. H. Dodd, Toledo; and J. Purdy, Mansfield.

At a subsequent meeting of the Directors, H. H. Dodd was elected President, and C. M. Godfrey, Vice President of the Company. The Chief Engineer, Horace Harding, made a very able and satisfactory report. From it, we learn that the whole length of the route, from the point of its intersection with the Maumee Valley road, near Waterville, to the state line, is 84 miles, deflecting only three and one-third miles from a straight line. The points on the Ohio portion of the road, west of Toledo, are Gilead, Medary, Kalida, Fort Jennings, Delphos and Shanesville, intersecting the state line at a point where the Cleveland and St. Louis Railroad crosses. At Muncie, 41 miles from this point, it connects with the Indianapolis and Bellefontaine Railroad, making the whole distance between Toledo and Indianapolis 196 miles.—*Statesman & Democrat.*

Cleveland, Columbus & Cincinnati Railroad.—At a recent meeting of the stockholders of this company, at Cleveland, 18,984 shares of stock were represented. The indorsement of $200,000 bonds of Bellefontaine & Indianapolis Railroad Company, and $400,000 of the third mortgage bonds of the Columbus, Piqua & Indiana Railroad Company, and the subscription of $50,000 to the Mississippi & Atlantic Railroad Company, and the subscription of 117,500 to the Indiana companies, all making important connections with the first named road, were ratified.

CINCINNATI STEAM FIRE ENGINE.

"Citizens' Gift."

The above cut represents a perspective view of this "wonder of the age," the result of the inventive genius and mechanical skill of our townsman Mr. A. B. Latta, which has wrought such a beneficial change in the Fire Department of our city, and attracted the attention of other cities to such a degree as to induce many of them to send special committees to examine whether the wonderful reports they have heard of it were true or not; all of which committees have returned to those who sent them satisfied from their own observation that "one-half had not been told them."

In number 11, vol. 1 of the RECORD, we attempted such a description as we could, without a cut to illustrate our remarks, with little hope, however, of conveying a very accurate idea of the machine. By the kindness of H. H. Shipley & Bro., Engravers, of our city, we are now enabled to present a very accurate drawing, by Mr. Geo. Stillman, from which a very good idea can be formed. We copy portions of our former remarks with additions in illustration.

In shape, it is not unlike an ordinary locomotive, except that it has but *three* wheels; the front one being upon a pivot in the center of the fore part, and is thus placed to facilitate short turning, as well as to prevent any straining of the machinery by tilting of the wheels when crossing gutters, or other rough places obliquely.

It is of 80 horse power; and has the capacity of six of the largest hand engines, having double cylinders and force-pumps, one on each side. It can throw from one to six streams at the same time,—three from each side—and, when necessary, can *send a stream of steam* into a closed apartment, sufficient to stifle any flame, with comparatively trifling damage by water.

It has two six inch suction hose to supply the water—which are represented in the cut as being laid across the front and sides of the engine—and can discharge 1,800 barrels of water per hour. It has thrown water through an inch and three quarter nozzle, in a solid body, 240 feet, and 291 to where the spray fell; and has also thrown a stream through 1200 feet of hose, with one inch and a quarter nozzle, over a four story house.

Steam has been raised and the engine put in operation in three minutes and forty five seconds from the time the fire was lighted; it is seldom that more than five minutes are required. At a fire on Eighth street, near Sycamore, six squares east of the location of the engine house, it was in position and at work within *eight* minutes from the time the alarm was received at the house, and threw six streams of water for six consecutive hours.

At the fire on Fifth street square, owing to some delay in getting a location, it did not get to work under *ten* minutes, and again threw six streams for six hours unceasingly.

At a fire on the corner of Main and Fifth streets, it took up a position some distance off, and forced two streams of water through 1200 feet of hose; using only two streams for want of hose.

We could give numerous other evidences of its capacity and complete success, but want of space compels us to omit them.

The weight of the first one made was upwards of five tons; but this has been much reduced, while in the secend one made it is greatly lessened without at all impairing its efficiency.

It is drawn by four horses, though it has gearing by which the hinder wheels can be driven by steam, either together when ascending a hill, or singly when turning a corner; its speed down hill can be checked, when necessary, by reversing the engine; it has safely and easily descended and ascended the steep grade of Western Row at the river, when covered with ice; thus demonstrating its efficiency as a self-motor, even under unfavorable circumstances.

The diameter of the wheels is four feet six inches. These wheels have brass hubs with hickory spokes and felloes; width of tire of hinder wheels, 5½ inches; front wheel eight inches.

The width of the machine from outside to outside is nine feet; total length, 18 feet; which is divided into three nearly equal copartments. The first, over the front wheel is occupied by a copper tank, capable of containing a supply of water sufficient for the use of the engine for one hour; on each side of this tank are the air condensing vessels,

immediately over the delivery pipes,—three on each side—above the force pumps.

The steam cylinders are placed on each side, with connection rods reaching to a crank on the hinder axle, which passes through and inside of the wheels; in the center of this axle are two couplings fast upon the axle; each wheel has a hollow tube (the outer end of which is secured to the wheels) with a coupling upon the inner ones corresponding with the one upon the shaft, by means of which the Engineer is enabled to drive the Engine by steam at pleasure, as above described.

The pumps are located directly forward of the steam cylinders, the piston rod running directly to the pumps which throw the water.

In the second, or center department, immediately behind the tank, is the *doctor*,—placed crosswise, and occupying but a comparatively small space—which supplies the boiler with water; the engineer has his station also in this copartment.

The third department contains the boiler and furnace, with a platform, surrounded by a railing, in the rear for the fireman; and directly in the rear of the boiler is a rack to hold a supply of fuel.

This boiler is the most vital, and by no means the least scientific, portion of the whole machine.

It is square, and within a space of *four* feet, contains no less than 500 square feet of heating service, in the form of gas pipes, varying in size from one to two inches—the smallest size being nearest the fire.

The steam is generated in a coil of pipe made in a peculiar manner, and is the greatest novelty about the Engine.

This arrangement explains at once how it is that steam is so rapidly made. By another arrangement the steam generated in these pipes operates the doctor until the water in the boiler becomes heated. In rear of the boiler and above the furnace doors, is the axle-tree of the hinder wheels, with the coupling apparatus attached. The hight of the engine from the ground to the top of the boiler is eight feet six inches; to top of chimney, 15 feet.

The hose carriage is separate, and is attached to a wagon which accompanies the engine, carrying an extra supply of fuel. The complement of men for the engine is four, for the hose department, ten; all of whom sleep in the engine building or the immediate neighborhood. The horses are kept ready harnessed close at hand. On starting the great weight of the engine makes it a heavy pull; but as soon as steam is generated, power is applied to the driving wheels, and the labor of the horses is comparatively light; they always move at a trot. When arrived at a fire, the engine is placed in position, the tongue instantly uncoupled, and the horses led to one side, until ready to return to the engine house.

The Steam Fire Engine has been in use since 1852, and has given perfect satisfaction; a second one has since been put in operation—a gift from the citizens—and a third is now being built. The saving of labor is fully 90 per cent. over the hand engines; while the moral influence it exerts by doing away with the volunteer system cannot be too highly valued.

It will eventually supercede the hand engines in all of the cities of the Union. Boston has already ordered one. Louisville has made a contract to have one built at home.—Committees from Eastern cities have reported favorably; they will doubtless adopt them as soon as they can free themselves from the incubus of the volunteer fire department system. The demand for them is rapidly increasing, and Messrs. A. B. & F. Latta, the makers, have several of them now in course of construction.

A NEW FIRE-ARM.

The Washington *Star* gives the following account of experiments made with a new fire-arm:—Very recently the Army and Navy ordnance bureaus have caused experiments to be made by boards of Army and Navy officers with the "Perry" arms, an American invention, now in course of being patented in this country by the inventor, an ingenious American who has established a factory for them in Newark, New Jersey. Commodore Skinner was at the head of the naval experimenting commission, and Major Mordicai at the head of the army board. According to both reports this new invention proves to be likely to excel for practical use any other description of fire arms now in use in either hemisphere, not excepting the world-renowned Minnie rifle.—The naval commission witnessed the firing of one of the carbines seventy-five times in seven and a half minutes, without the slightest baulk. These guns load in a vibrating breech cylinder, working in an arc of a circle. They are self-priming, and when the cylinder is brought into position to receive the cartridge, it receives the cap, fifty of which are previously placed in a tube passing through the breech of the gun, by being emptied or turned in from another tube.

In the course of the experiments to which we allude above, and others subsequently made under the supervision of Major Dahlgreen, of the ordnance corps, at the navy yard, where there is a testing ground with a range of a thousand yards, the Perry carbine, (carrying a half ounce ball and weighing 6½ pounds,) at fifty yards, fired through twelve inch boards placed in a frame one inch apart; and also threw balls quite a mile. In the experiments at the navy yard, the Perry rifle was fired against the Minnie rifle. With the back sights of the former raised but one inch it threw the ball quite as accurately eigh hundred yards, as the Minnie gun, with the back sight raised three inches, threw its ball one thousand yards. This proves conclusively that its range is much greater than that of the Minnie; or, according to ordnance calculations, that with the back sight raised but two inches, it will be quite as accurate and deadly in its effects at one thousand three hundred yards, as the celebrated Minnie, with the back sight raised an inch higher, at a thousand yards, the Minnie heretofore being regarded as the most effective fire arm known that can be handled by a single person.

Cleveland & Toledo Railroad.—On Wednesday, the 5th ult., the stockholders of the Cleveland and Toledo Railroad Company held their annual meeting at Cleveland, when the following gentlemen were unanimously elected Directors of the Company, for the ensuing year, viz:

Samuel F. Vinton, E. Lane, C. L. Boalt, John B. Waring, Isaac L. Hewett, of Ohio. E. B. Litchfield, Wm. H. Russell, D. B. Fearing, of New York. Wm. F. Jarvis, of Middletown, Conn.

Hon. S. F. Vinton was unanimously re-elected President, and E. B. Litchfield Esq., Treasurer of the company.

Mr. Vinton, on accepting the appointment, gave notice that it is his intention to resign the office on the first of September next, and that his acceptance must be with the understanding that he was to be at liberty to retire at that time.

What Railroads do.—A Georgia cotemporary who has just paid a visit to Atlanta reports "four hundred houses now in course of erection," many of them of a fine city like style. Ten years ago Atlanta was in the woods—it now contains a population not far from ten thousand. The assessment of city property just completed, shows the amount of real estate taxable in the city, to be $1,800,000. This is an increase of $737,558 over the amount of real estate returned for 1853. The whole amount of taxable property, real and personal, for the present year amounts to $2,800,000, being an increase of $775,000 over last year. Of the real estate in the city, that which is not taxable, being made up principally of church property and railroad lots and buildings, amounts to $115,000.

Portsmouth & Chillicothe Railroad.—From the *Piketown Journal* we learn that the following persons have been elected Directors of the Portsmouth and Chillicothe railroad for one year from the 1st day of July 1854.

Wayne Griswold, Circleville; Dan'l C. Entriken, Kingston; James Emmitt, Waverly; James Collings, Piketon; Albert Becker, Cuyahoga Falls; Lucian Rust, Piketon; Thomas Dugan, Portsmouth.

Incident of the Great Excursion of the Rock Island Railroad Company.

The Galena *Jeffersonian* of the 20th June, relates the following incident as occurring on the trip:

On board the Sparhawk, the passengers of that boat held a meeting, one evening, to listen to public speaking. Mr. McCurdy, late American Minister at the Court of Vienna, was among those who entertained the audience with appropriate remarks. Mr. McCurdy said, during the time he was in Vienna, he was invited by a government official, to attend the celebration of the opening of a line of railroad, thirty miles in length, connecting the capital with a neighboring town. With his invitation he received a note requesting him to state the number of tickets he should desire for the use of his countrymen then in Vienna; he complied with the request by sending the names of some half dozen Americans whom he had invited. Soon a return message covering a single ticket, came, saying that the expense of the excursion was so large, that, though backed up by the Austrian treasury, the number of invitations must be very limited. This one ticket he sent back with a note diplomatically telling his correspondent, that he could not, under the circumstances, think of making so heavy a draft upon the national finances. Nevertheless, he used his own ticket, and was present at the ceremony. Though, said Mr. M. the affair had been long talked of, and though the government desired to make it grand and impressive, it was, compared with what we here see accomplished by an American corporation, "mean and contemptible!"

The Austrian Vice-Consul, resident at New York, was an attentive listener to Mr. McCurdy's remarks, and so keenly did he feel for Austrian honor, that, early next morning he sent Mr. McC. his card, demanding an apology, or a fight. We have not heard how the matter was arranged.

Boston and Albany Railroad.—The sinking fund of the Western Railroad, at the publication of the last report, amounted to about $24 for each share of stock; and it is estimated that this fund will be sufficient to extinguish at maturity the debt of the corporation, so that those who are then stockholders will have property which has cost over $10,000,000, represented by shares to the amount of $5,150,000, provided that there shall be an increase of the construction account in the meantime. A second track over this road between Springfield and Albany, is very much needed for the public accommodation, and its completion would unquestionably add very largely to the receipts of the road. We understand that the directors already have this matter under consideration, and it is to be hoped that no time will be lost in commencing the work.—*Albany Register.*

Railroad Furnishing Depot.—The attention of railroad companies, contractors, and others is called to the advertisement of Messrs. Sellers & Dana, of our city, in the columns of the Record.

These gentlemen have a constant supply of almost every article needed in railroad construction and equipment, which they will furnish at prices and on terms which will make it an object to parties interested. We commend them to the public as enterprising, honorable business men.

Terre Haute & Alton Railroad.—The annual meeting of the stockholders of this company took place at Shelbyville on Saturday the 24th ult. Most of the stock subscribed was represented; the late Board of Directors made a report to the stockholders. An election of Directors for the ensuing year resulted in the choice of the following named gentlemen:

Simeon Ryder, Robert Smith, P. C. Huggins, John Stryker, Wm. H. Russell, John B. Jarvis, Samuel W. Moulton, Edwin C. Litchfield, Charles Cruft, Hiram Sanford, Thos. C. Durant, John L. A. Sanford, Electus B. Litchfield.

The representative of the stock of the city of Alton requested that the city be given a director of its own selection, which request was not complied with, and a protest in the name of the city was entered.

After the election the new board met and re-elected Capt. Ryder President, and Mr. Chiles Chief Engineer.

Doings at Washington.—Under date of the 14th inst., we find as follows:

The river and harbor bill which passed the House yesterday, appropriates $16,000 for the improvement of the Illinois river, $40,000 for the Ohio river, $190,000 to keep in order the Louisville and Portland canal, which is to be free of toll from the commencement of next yoar; $25,000 per annum for the Tennessee river, $35,000 for the Arkansas river, $40,000 for snag and dredge boats, for the Mississippi, Ohio, Missouri, Illinois and Arkansas rivers, and $70,000 for post office and light house.

The bill granting alternate sections of land to the states of Louisiana and Mississippi, for the construction of a railway from New Orleans to Mobile, was taken up and passed.

The bill granting public lands to aid in the construction of certain railways in Missouri, was taken up and passed.

Railway across the Appenines.—According to some facts in foreign papers, the line of railway from Turin to Genoa was inaugurated on the 6th of March. The trains carrying the ministers and quite a number of invited company, left Turin at half-past nine in the morning, and after stopping at nine stations arrived at Genoa at one The distance is 115 miles. The train was drawn by two of Stephenson's most powerful engines. The famous inclined plane, which ascends thirty-five feet in a thousand, at the same time that the rails are laid on a curve of 1,200 feet radius, was traversed in nine minutes, and the distance is over three miles. The tunnel des Giovi, nearly two miles long, with an ascent of twenty-nine feet in a thousand, was traversed in six minutes. In short, the Appenines have been very successfully surmounted.

The Virginia and Tennessee Railroad is now completed to the Newbern depot, which is one hundred and sixty miles from Lynchburg. The cars will commence running to Newbern about the middle of the week—a day or two's delay being necessary for the purpose of securing and strengthening the new track.

Louisville & Newport Branch Railroad Company.—This company was recently organized in Louisville, at the Louisville and Frankfort railroad office; the stock being fully represented to the amount of over $300-000. No doubt is entertained of the ultimate construction of the road, though the present embarrassment in money will probably delay all progress for a short time.

The gentlemen elected directors were: T. G. Gaylord. of Cincinnati; Thos. L. Jones, and Daniel Wolf, of Newport; D L. Martin, of Owen; Geo. D. Dicken and Wm. Smith, of Henry county; and A. O. Smith and W. D. Reed of Louisville.

The directors will meet in a few days to elect a president and other officers.

Buffalo & State Line Railroad.—The following gentlemen were on the 27th ult., elected Directors of this road for the ensuing year: Alanson Robinson, Geo. Palmer, Dean Richmond, Wm. Williams, Chas. H. Lee, Henry L. Lansing, Buffalo; Geo. W. Patterson, Westfield, Chatauque Co.; Jas. S. Wadsworth, Geneseo, Livingston Co.; Jos. Field and Asa Sprague, Rochester; Horace White and John Wilkeson, Syracuse, Onondaga Co.; Homer Ramsdell, Newburgh, Orange Co.

At a meeting of the directors, Geo. Palmer was re-elected President, and Dean Richmond Vice President.

Peoria and Bureau Valley Railroad.—The annual meeting of the stockholders of this company was held in Peoria on the 25th ult. The following persons were elected directors for the ensuing year:

Isaac Underhill, John L. Griswold, John Frink, John Hamlin, Peoria; T. D. Brewster, Peru; C. W. Durant, Albany; N. B. Judd, Chicago.

The Board of Directors met and elected officers as follows:

N. B. Judd, President, W. Cockle, Secretary; N. B. Curtiss, Treasurer; Purple & Sanger, Attorneys.

ACKNOWLEDGMENTS.

We are indebted to the attention of William Parry, Esq., of Cinnaminson, N. J., for a copy of "The War with Monopoly, Speeches, and Procedings concerning the Air-Line Railroad, and extension of the Camden and Amboy Railroad Charter, at the 78th session of the New Jersey Legislature,

We are greatly indebted to the kindness of Alonzo Livermore, Esq., C. E. of Sunbury, Pa., for sundry corrections and additions to our Railroad Map, of which we shall avail ourselves in the next edition.

We would be glad to receive the same favors from any other authentic source, that the map may be as complete as it is possible to make it.

Two $1,000 7 per cent. bonds, Little Miami RR. redeemable in New York in 1858			88	00

MONETARY.

We have a much better tone to note in the Money Market at the East. The withdrawal of $7,000,000 from the Treasury, where it had been idle, and putting it into the banks where it could be made use of, has tended to relieve the immediate money pressure. The banks have some $3,000,000 of the Mexican money on loan at 3 per cent., not subject to call until after 30 days, with a probability of keeping the major portion of it for six months. First class 4 and 6 months' paper was taken at 10 per cent. per annum.

In the Stock Market we note a continued depression, though it has somewhat recovered from the shock occasioned by the discovery of the recent frauds. We expected by this time to have been able to give a condensed statement of the facts relative to Mr. Schuyler's defalcation; but the facts have not yet been fully elicited.—Examinations are going on in all directions where he was in any way interested, as well as in other directions We will endeavor to give a condensed account in our next issue.

The sales have been as follows:

By A. H. Nicolay, 10th inst—

$5,000	Cleve. & Pitts. 7s. 73, conv.	$80 00
5,000	Gr. West. Ills. 10s. '68	87 00

5,000	Gre. West. Ills. 10s. '68	87	00
100	shares N. Y. & Erie R. R. stock	55	87½
350	" " "	55	75

1 Original share, Brecken. Coal Co. (being 280 shares) 1-130th of the whole property.. $8.975 00

At the West monetery affairs are very quiet, but little prime paper offering; for all other kinds the rates are from 2 to 3 per cent. per month. Railroad securities cannot be negotiated at any price.

The Stock Market is very much depressed. Sales are only made upon compulsion. Confidence is sadly shaken, and it will require considerable time to restore the market to its former state.

Exchange, rates at 11-4@1 1-2 per cent.

Cincinnati, Harrison & Indianapolis Straight Line Railroad,

NOTICE is hereby given that the annual meeting of the stockholders of the Cincinnati, Harrison & Indianapolis Straight Line Railroad Company, for the election of Directors, and for such other business as may come before them, will be held at the office of the Company in Cincinnati, on THURSDAY, the 10th day of August next, at 10 o'clock A. M. The Polls for said election will be kept open from 10 o'clock, A. M., to 4 o'clock, P. M., of said day By order of the Directors.

Covington and Lexington Railroad.

OPEN to Cynthiana, 66 miles. Two Daily Passenger Trains.

On and after Thursday, May 25th, and until further notice, Trains will run as follows:

Express Train leaves Covington at 8 o'clock, A. M. stopping at Benton, Demossville, Butler, Falmouth, Callenville, Boyd's, Berry's, Robinson's and Garnett's only, and arriving at Cynthiana at 11.50 A. M. Returning, leave Cynthiana, at 1.30 P. M., stopping at the above stations, and arriving at Covington at 5.30 P. M.

Passengers for Paris and Lexington, by taking the above train, will take dinner at Cynthiana and by Messrs. Thurston and Thompson's line of Omnibusses, will reach Paris at 4 o'clock, P. M. The Evening Train of the Maysville and Lexington Road, leaves Paris at 5 o'clock, P. M., enabling passengers by this route to reach Lexington at 6 o'clock, P. M. Returning, leave Lexington by the 7 A. M. Train of the Maysville and Lexington Road for Paris, leave Paris by Messrs Thurston & Thompson's line of Omnibusses at 8.30 A. M. arriving at Cynthiana in time for dinner, and connect with the train for Covington at 1.30, P. M., arriving at Covington at 5.30 P. M.

Accommodation Train leaves Cynthiana at 6 o'clock A. M., stopping at all regular and flag stations upon the road, and arriving at Covington at 10.10 A. M. Returning, leave Covington at 3.15 P. M., stopping as above, and arrive at Cynthiana at 7.40 P. M.

Passengers by this train can leave home in the morning, pass five hours in Covington or Cincinnati, and return home before dark.

The Express Train will stop only at the stations named. Passengers for other points must take the Accommodation train.

Freight trains, for the present, will leave Covington Mondays, Wednesdays and Fridays; leave Cynthiana Tuesdays, Thursdays and Saturdays.

Freight will be received at Covington and Cynthiana up to 4 o'clock P. M., for the train of the following morning.

jy. 20. Superintendent.

OUR RAILROAD MAP---NEW EDITION.

We have now ready a new and revised edition of our RAILROAD MAP, containing corrections and additions from reliable sources, making it as reliable as it is possible to make such a map.

We are prepared to print maps for Railroad Companies to illustrate their reports, either from the stone as it now is, or make any alterations to suit parties. Railroad Companies will find this much more economical than getting up maps especially for their roads.

Price of maps as follows:

Plain, sized,	40 cents.
Colored in outline,	50 "
Colored in States,	75 "

A liberal discount where a number are taken.

jy.13.

Wabash Valley Railroad Company.

NOTICE TO CONTRACTORS.

SEALED proposals will be received at the office o Allen, McGrady & Co., Vincennes, Ind, until the 25th of July, 1854, for the grading, bridging, masonry, furnishing cross-ties, and laying the track of the entire line of the Wabash Valley Railroad, extending from Vincennes, Ind., to Paris, Ill., a distance of sixty-six miles.

Plans, profiles and specifications are ready at the office of Allen, McGrady & Co., Vincennes, and also at the office of the Company, Marshall, Ill.

The line passes through a deusely populated and highly cultivated country, affording every facility for obtaining supplies, and conveniences for carrying on the work.

The work is of an exceedingly favorable character and well worthy the attention of experienced contractors.

Contractors are especially rsquested to give the work personal examination before submitting their propositions.

The work will be divided into sections of about one mile each for the convenience of contractors, and bids will be received for the whole or any portion of the work, reserving the right to reject any or all propositions if deemed unreasonable.

Bids will also be considered for the payment of the work to be either all cash or part cash and part stock.

To Railroad Contractors, Quarry Men, &c.

THE attention of those interested is called to ASH'S IMPROVED HORSE POWER ROCK DRILL, for Railroad Excavation, Stone Quarrying, Well Boring &c.

This Drill is worked by HORSE POWER, requiring but one horse and one man, to keep it constantly at work, with great ease and velocity, performing 60 strokes per minute. It is cheap of construction and repair. The AUGER weights from 300 to 500 pounds, will drill a perpendicular or inclined hole FOUR INCHES IN DIAMETER, at the rate of from 8 to 16 feet per day in ordinary lime stone. It has drilled 2 feet in one hour.

For rights to use for Counties or States, apply to the Patentee. WILLIAM F. ASH,
May 20, 3* Springfield, Ohio.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly flushing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Boston, the Eriesson Steamers by Canal to Philadelphia and New York,

And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

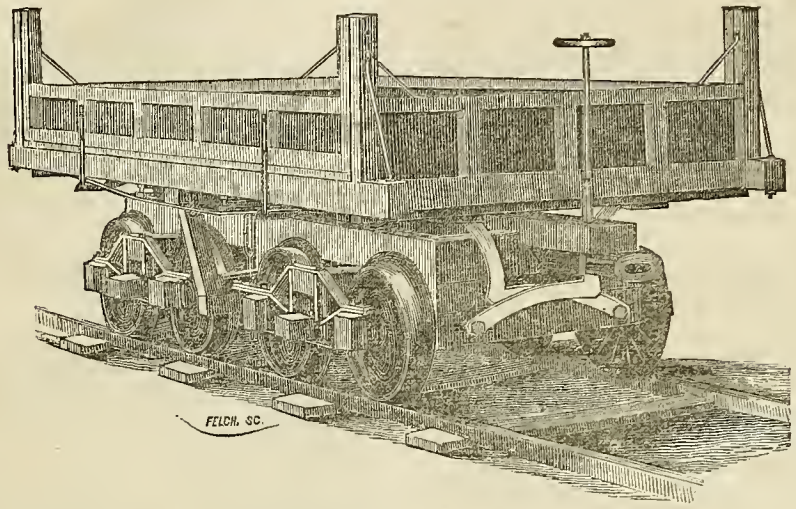
Also, for sale, Seven Dimpfel Patent Fans, 2 feet by 9 inches, second hand. Apply as above. [jy.13-6t.

BAILEY'S PATENT DUMPING CAR.

Fig. 1.



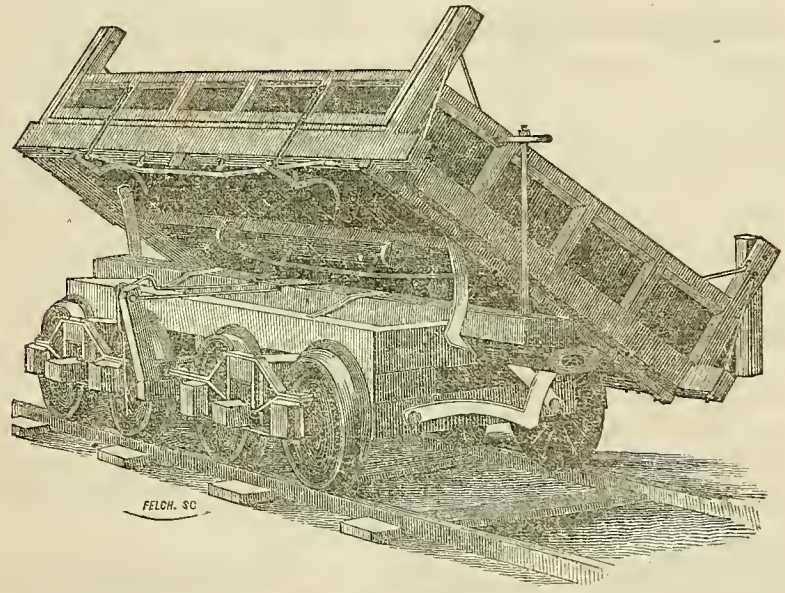


Fig 2.

The above engravings are views of a most important improvement in Railroad Dumping Cars. A patent was granted to C. P. Bailey for the improvement. January 24th, 1854.

Fig. 1 is a view of the car ready to receive the load.

Fig. 2 when dumped, or the load discharged.

This improvement has been in use on the Central Ohio Railroad for several months; also, on the Cincinnati, Hamilton & Dayton; Cleveland, Zanesville & Cincinnati; Cleveland & Columbus; and other Railroads in this state. Also upon the Illinois Central, in Illinois.

The improvement consists mainly, in the adoption of the Wrought Iron Transverse Bars, instead of the Cast Iron Rockers, generally in use. There are, however, other details of importance.

The box or body of the car rests on the ends of the Transverse Bars, whose other and lower ends are attached to the frame of the truck; two of the (wrought iron) bars are used at each end of the cars, to support and operate as guides in dumping the car. This improvement can be applied equally as well to the four-wheeled as to the eight-wheeled car.

One man will dump this car with ease when loaded, in less time than ten men can dump the rocker car, (the long or eight wheeled car is alluded to.) Contractors who have been using it, state that in graveling roads, **it is a saving of two cents per yard**, over the rocker car—that it is a much safer and easier car to manage, preferring it to any other car now in use for similar purposes.

Its liability to get out of repair is not one-tenth that of the Rocker Car. It is also well calculated for carrying and unloading Coal, Lime, Plaster, and all such materials as are carried in Dumping Cars—giving greater inclination in dumping, and discharging the load with greater facility than any other car.

The attention of Railroad Companies wanting Gravel Cars, as well as Coal Cars, is respectfully solicited to this improvement. The cost of this car does not exceed that of the Rocker Car,

To Railroad Companies and Car Builders who wish to purchase Rights, or wish information on the subject, letters addressed to me at Columbus, Ohio, will receive immediate attention.

GEO. L. CHASE.

Columbus, Ohio, June, 1854. Sole Agent for the United States.

TESTIMONIALS.

Engineer's Office, C.O. R. R.
Zanesville, Ohio, Nov. 21st, 1853.

Charles P. Bailey, Esq.,

Dear Sir:—At your request, some two months since, I caused to be placed on this road two of your newly invented Gravel or Dumping Cars. From what I have seen of their work I am clearly of the opinion that they will soon supercede all others of the kind now in use

We have had the long car filled to its utmost capacity with the various kinds of excavation, and placed it in every position, and one man would dump it with ease in ten seconds, whereas, with the ordinary Rocker Car, it takes ten men one minute to perform the same labor.

The Car is simple in construction—not liable to get out of repair, as there is but little cast-iron about it. It tips to a greater angle than the ordinary car, therefore leaving its load in a better shape. I have no hesitation in saying that when more cars of the kind are wanted on this road they will be built after your model.

Wishing you every success in your undertaking, I remain, with great respect,

Yours, &c.,
GEO. T. CLARKE,
Chief Engineer.

I have purchased for the use of this company, two Gravel Cars, built after the plan of Mr. Bailey, and fully agree to the opinion above expressed.

HENRY O. AMES,
Sup't Cin., Ham. & Dayton Railroad.

I fully agree in the statement made by the gentlemen in this letter, and may also state that they are the best Gravel Cars ever built, in my opinion.

DANIEL McLAREN.
Mast. Machinist Cin., Ham. & Dayton Railroad.

Zanesville, Dec. 21, 1853.

Charles P. Bailey, Esq.,

Dear Sir:—From an experience in using your Improved Dumping Car, we have no hesitation in saying that two cents per yard is saved, (in labor and time) by using your car instead of the present Rocker Car.

That the repairs incidental to your car are not one-tenth of what they are on the Rocker Car.

That it is much the most profitable car for contractors as well as the safest one for laborers to use, being easier to handle.

We consider it superior, in every reapect, to all other cars of the kind now in use.

Yours, truly,
E. NEWCOMB,
C. BARRET.
Cont'rs for grav. East. Div. C. O Railroad.

I have seen the car above referred to at work, upon the Eastern Division Central Ohio Railroad, and fully concur with the opinion of Messrs. Newcomb & Barret

E. B. DUVAL,
Mast. Machinist, Central Ohio Railroad.
Zanesville, December 21, 1853.

Zanesville, Dec. 22, 1853.

Mr. C. P. Bailey,

Dear Sir:—As you desire my opinion of your Improved Dump or Gravel Car, that has been in use for the last three months on the Central Ohio Railroad, I do not hesitate to recommend it as being the best plan for a Gravel or Dump Car I have ever seen. The bills for repairing Dump Cars, such as are now in general use, it is well known, constitute a serious item of expense. On this account alone, your plan deserves a preference over all others, as there is but little liability about your car to any such accidents as are constantly occurring to the others. It dumps to a greater angle, and one or two men can dump it in less time, and with greater ease than the ordinary Rocker is dumped by ten or twelve men.

It will give me pleasure to recommend it as superior to any improvement of the kind in use.

ROBERT MACLEOD.
Chief Engineer, P. M. & C. R. R.

At a meeting of the Ohio Association of Railroad Superintendents, held at Cincinnati, March 8, 1854, the Committee appointed to examine Bailey's Patent Dumping Car,

REPORT,

That they have examined the Car, and consider the improvement a valuable one; and would recommend to any members of the Association who may need Gravel Cars, to examine and test this Car, before purchasing elsewhere.

W. H. CLEMENT,
For the Committee.

Clev Col. & Cin. and Clev. & Erie R. R.
Supt.'s Office, Cleveland, O., Apr. 24, 1854.

Mr. Charles P. Bailey,

Dear Sir:—Two of your Patent Dumping Gravel Cars have been used on the Cleveland, Columbus & Cincinnati Railroad for several weeks, and I am so well satisfied that they are better than any others, that I have just ordered thirty more of the same sort,

Respectfully,
L TILTON
Supt.

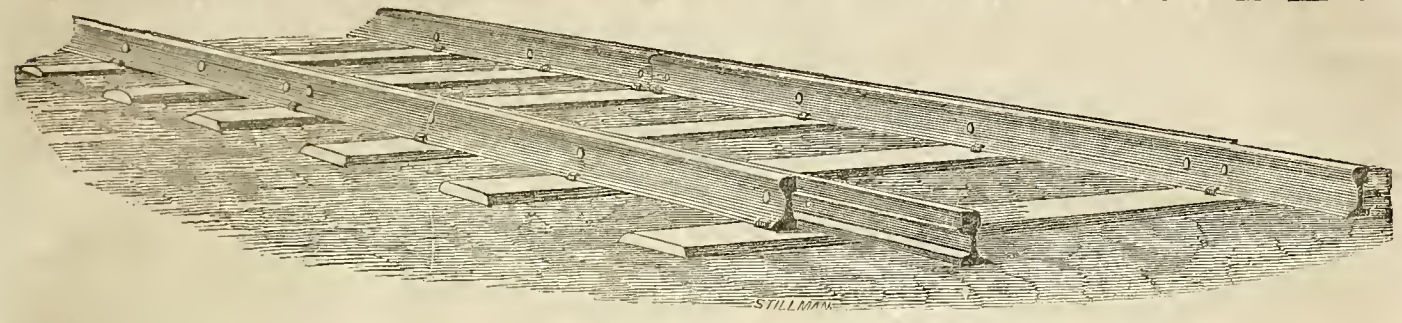
OHIO SCALE WORKS.

Rigdon, Ryland & Co.,

No. 39 Vine Street, between Front and Columbia Streets,



CINCINNATI.

WE are now prepared to furnish **Railroad Track and Depot Scales** of all sizes, which we warrant in every respect equal to any manufactured in the United States.

Being practical workmen ourselves, we feel confident that we can furnish the West and South with as good an article and cheaper than can be bought East.

Cincinnati, June 29, 1854.

WINSLOW'S
PATENT COMPOUND RAIL.

THIS RAIL, which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a

THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are—a saving in the wear and tear of Machinery—it saves, to a great extent, in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable Being practically a continuous Rail for the entire length of the road, without break at the ends of bars, the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effects upon Cars and Machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at Hanging Rock Iron Works, upon the Ohio River, and at Mt. Savage Iron Works, Maryland. Specimens of the Rail and patterns of the same will be gladly shown, as well as information in relation thereto, given by application to

A. S. WINSLOW, Nos. 9 & 11 West Second Street, bet. Main and Walnut Sts., CINCINNATI.

MUSKINGUM WORKS,

ZANESVILLE, OHIO.

DOUGLASS, SMITH & CO.

WOULD respectfully call the attention of Railroad Companies to their establishment at Zanesville They are prepared to execute orders, on short notice, for

Passenger Cars of the most superior description,

Second Class Passenger, Mail Express, and Baggage Cars; Freight, Cattle, four or eight wheeled Gravel Cars.

We manufacture a superior

CAR WHEEL,

Over 2500 of which are now running on the Central Ohio Railroad, and many of these have been in use on the road over two years, having in that time only three to crack, and two to be renewed in consequence of the wearing of the Chill. We have also commenced the manufacture of the celebrated

WASHBURN WHEEL,

And are prepared to furnish this wheel, with or without axles. Also, castings for Cars fitted to order at the shortest notice.

BOLLMAN'S PATENT IRON & WOOD BRIDGE.

We are also agents and builders of the above celebrated Bridge. Are now placing upon the piers an iron bridge on this plan over the Muskingum river at Zanesville. We are ready to contract with companies for the construction of this Bridge. All orders addressed

DOUGLASS, SMITH & CO.,
au4tf. Muskingum Works, Zanesville, O.

Lightner's Patent Axle Boxes for Railroad Cars.

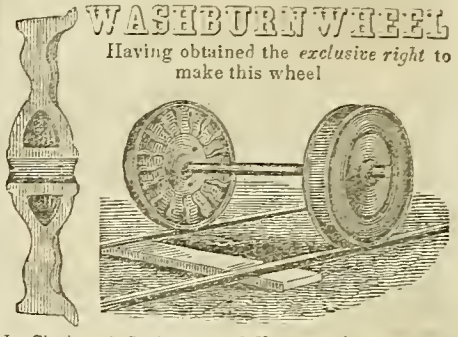
THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Reservoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.



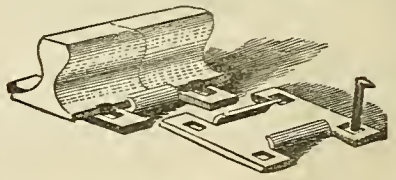
Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,
PRINCIPAL AGENT,
May 18.6* Office, No. 167 Broadway, New York.

FULTON CAR WORKS,

CINCINNATI, OHIO.

THE Proprietors of this establishment would respectfully call the attention of Railroad Companies in the West and South to their establishment at Cincinnati.—Their facilities for manufacturing are extensive, and the means of transportation to the different points speedy and economical. They are prepared to execute to order on short notice, eight-wheeled Passenger Cars of the most superior description. Four or eight-wheeled Baggage, Cattle, Freight and Gravel Cars. Also, Crank and Lever Hand Cars, Trucks, Wheels, and Axles fitted.



WASHBURN WHEEL

Having obtained the *exclusive right* to make this wheel

In Cincinnati, Covington and Newport, they are now prepared to furnish Railroad Companies with that Celebrated wheel, with or without Axles. Also, Journal Oil Boxes of any pattern, and Castings for cars fitted to order at the shortest notice.

Address KECK & HUBBARD,
Fulton Car Works Cincinnati, Ohio.
ap.12 Office 62 East Second Street.

RAILROAD SPIKES,

WROUGHT IRON

Chairs and Fastenings.

THE subscriber continues to manufacture with increased facilities, Hook and Flat-Head Railroad Spikes, and wrought Iron Chairs of any pattern, either punched or plain. The best quality of Iron is used, and the articles are guaranteed to give satisfaction in every respect. We are prepared to fill orders for any quantity with dispatch, and at the lowest market prices.

All communications addressed to us will meet with prompt attention.

SMITH & TYSON,
No. 25 South Charles Street, Baltimore.

J. DAVENPORT. . . . M. D. WELLMAN. . . . C. M. RUSSELL.

DAVENPORT, RUSSEL & CO.,

Railway Car Manufacturers,

MASSILON, OHIO.

THE subscriber, late of the firm of Davenport, Bridges & Co., Fitchburgh, Mass., having associated himself with Messrs. Wellman and Russell, under the above name, would respectfully solicit calls for any kind of Passenger, Baggage, Post Office, Freight, Coal, Gravel or Hand Cars.

Having had fifteen years experience in the business and having secured the best of workmen from the Car Factory in Cambridge, Mass., I feel confident that perfect satisfaction can be given in all work entrusted to our care.

We have now on hand the best of dry White-Oak with which we think we can build Cars as cheap and as well as any other establishment in the States.

Feb. 16.* JOSEPH DAVENPORT.

COLUMBUS PIQUA, AND INDIANA RAILROAD.

New route from Columbus, West and from Urbana, East.

On and after Monday September 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between COLUMBUS and URBANA. Will leave Columbus at 4.50 a.m., and 3.30 p.m.—arriving at Urbana at 8.12 a.m., and 6.14 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with the night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morning Cleveland and Zanesville trains can have a few hours at Columbus and leave by the 3.30 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton and Cincinnati.

The 9.15 a.m. train from Urbana connects with the morning train from Cincinnati and Dayton that arrives at Urbana 8.40 a.m.—arriving at Columbus at 12.05 p.m in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Sandusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibuses will connect with the trains at Urbana for the conveyence of passengers to and from Piqua and Greenville over a good Macadamized road.

TESTIMONIALS:

OFFICE OF THE G. & C. U. RAILROAD CO.,
CHICAGO, FEB. 20TH, 1854.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—All of the principal station buildings on this road are furnished with your Depot and Platform Scales, with the exceptions of two scales. Your Scales were adopted after trial with those of other makers, and I take pleasure in now saying, that after more than four years trial, they have given entire satisfactiou to us, and the public doing business with the Company.

I am not aware of a dollar's expense being incurred from wear or defect of materials in any part of the scales. The Track Scale, with suspended platform, which you have recently put into our principal depot at this place, judging from present appearance and the use to which it has been put, will, I doubt not, answer the purpose desired, and be equally satisfactory.

JOHN B. TURNER,
Pres't and Sup't.

CENTRAL RAILROAD CO.
SAVANNAH, JAN. 6TH, 1853.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.

DEAR SIRS:—Your Scales, which we have used for many years, gave so much satisfaction, that we ordered from your House, all the Scales necessary for our large new Warehouse. Your agent has just finished putting up twenty-two of your No. 1 and No. 2 Depot Scales and a large Road Scale, and I am pleased with the manner in which the job has been done. I trust and believe that this work will do credit to your establishment.

Respectfully, your obedient servant,
R. R. CUYLER, Pres't.

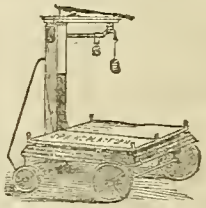
PORT RICHMOND, PA. MARCH 2D, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.,

GENTLEMEN:—There are now in the Richmond Wharves at the terminus of the Reading Railroad, Twenty-six of your ten ton Track Scales, which have been in constant use for more than six years. The least quantity of Coal weighed annually upon any one wharf has been 400,000 tons. The aggregate quantity weighed upon the twenty-six scales, has been more than one million two hundred thousand tons per annum.

During the time since they have been in use, they have always retained their adjustment without any expense for repairs. They have been tested every year by the Sealer of Weights for the county of Philadelphia, and always found correct, and at the present time their operation is apparently as perfect and as sensitive as when first built.

JOHN E. HOBERT,
Superintendent of Wharves.



STATE OF NEW YORK,
CANAL COMMISSIONERS OFFICE,
ALBANY, JUNE 21, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—Your favor of the 10th, asking my views of the Weigh Lock Scales, manufactured by you, and introduced upon the Erie Canal, is received.

I have no hesitation in saying, that they have fully answered your recommendation in every particular. Their capacity for streugth is fully equal to sustain the required burthen. They are not liable to get out of adjustment or repair. The arrangement of the Weighing Beam is admirably adapted to obtain rapid results. I know of no Scale superior to them, in this or any other country.

In great haste, Yours truly,
JOHN C. MATHER,
Canal Commissioner.

PORTABLE SCALES.

The following Railroads have been furnished exclusively, or nearly so, with FAIRBANKS' SCALES:

Alabama & Tennessee.	Huron & Oxford.

THE REMISSION OF DUTY ON RAILROAD IRON.

The Congress of the United States are asked to remit and repeal the tax imposed upon bar iron used in the construction of railways. The object is to aid the construction of railways, or rather, to prevent the stoppage of work on a great many railway lines already commenced; and thus to prevent throwing out of employment tens of thousands of laborers, mechanics, artizans, engineers, and persons in all pursuits, who have found employment for their labor and sale for their products in these great enterprises; in fine, to prevent a sudden and depreciating change in the labor and economy of the country. The statesman who acts upon this subject will ask—1st. Whether this tax on railway iron is really such a burden as represented? 2d. If it is, whether the tax has aided the mining and manufacturing interest to an extent which will compensate the injury to railways? 3d, Whether a change thus produced in the industry and economy of the country will not be far more injurious to the country, than the tax is a benefit?

1. Is the tax on railway iron a real and positive burden, likely to interfere in the construction of railways? To this we answer that *it is*. The proof of this is found in the *amount* paid, and still more in the fact, that it is *cash* payment. As to the *amount* actually paid by railways at the present time, as a tax on their iron, we have two modes of ascertaining, both of which are accurate, and which effectually test each other.

First. We have the Treasury returns of the importation of this species of iron, and the duties paid on it. It is well known that the great increase in Railway construction has been in the last five years, and the Treasury returns show precisely what is the increased import of railway iron in that time.—Thus:

Bar, or rolled iron, imported in the year ending 30th of June, 1848	$3,679,598
Bar, or rolled iron, imported in the year ending 30th of June, 1853	$45,402,776
Increase per annum	$11,723,178

Now, it is well known, that almost this entire increase is in railway iron. The iron manufactures of the country have rapidly increased; and there is very little, probably no increased importation of common bar iron.—Taking the average weight of iron per mile,

and the cost of importation (independent of duty,) and the above increased value will be equivalent to the iron on 2,000 miles of railway. Now, how does that correspond with the actual railway construction? The progress of railway construction in the last three years has been as follows:

Railways in May, 1852, according to Andrews' Report	12,808 miles.
Railways in January, 1853, according to the American Almanac	14,494 "
Railways in June, 1854, according to the most accurate returns	17,500 "
Increase in two years	5,692 "
Increase in one year	2,846 "

It will be a most ample allowance, if we suppose what is over 2,000 miles to have been ironed with American metal. Thus we find: That the Treasury Report of the increased import of bar iron, and the amount actually required for railway construction, correspond exactly, when we have made some allowance for the occasional use of American iron.

But we must go further than this, and consider that at this time, the number and length of railways in construction are much greater than ever before. But suppose we go back a year or two, and test the annual construction by what was then in construction. The time required to construct a medium railway now, is about three years. But we will allow *four*. We have then this data.

Miles of railway in actual construction in May 1852, according to Andrew's Report	12,600
Average per annum ¼	3,150

This, again, corresponds very well with the number of miles actually constructed since that time. On a careful revision of the various lines of railway now in progress, it will be found that there are now 12,000 miles of railway in course of construction, and for which the iron is not yet provided. If the work on these lines be not arrested, there will be constructed in the next four years, 3,000 miles of railway per annum, of which at least three-fourths, (2,250 miles) must receive the iron from Europe. This may be assumed as a certainty, because the tax on importation has not been able to prevent the importation of a single bar of iron, however onerous that tax may be.

Let us now see what the railways *have paid* and what they *will pay*, as a tax, or burden on their iron. In 1848, the value of imported bar iron was $3,679,598, of which less than three millions, certainly, was in iron used for ordinary purposes. We may assume three millions as the average value of ordinary bar iron imported, and we have the following results, viz:

In the year ending	Total imports of Bar Iron.	For Common use.	For Railways.
30th June, 1848	$3,679 598	$3,000,000	$ 679,598
" " 1849	6,060,068	3,000,000	3,060,068
" " 1850	7,397,166	3,000,000	4,397,166
" " 1851	7,324,283	3,000,000	4,324,283
" " 1852	8,568,317	3,000,000	5,568,317
" " 1853	15,402,776	3,000,000	12,402,776
Six years	$48,432,208	$18,000,000	$30,432,208
Tax paid by railways in six years past			$9,129.662

In the six years past railways have paid near ten millions of dollars as a tax on their iron. But supposing no new railways are commenced, and only those in progress completed, *what will they pay in the next four years?* We here see that the importation of bar iron in 1852–3 was, in value, $15,400,000, and that $12,400,000 of that was for railroad iron. In 1853–4 there will be imported a much larger amount, and that must continue for the next four years, or the works must be stopped. The number of miles to be ironed from Europe will be 2,250 per annum. This will require 225,000 tons. To this must be added 75,000 tons more for double tracks, side tracks, switches, etc., now constructing on nearly all railways. 300,000 tons will be valued, independent of duty, at $55 per ton, amounting to $16,500,000; on which the duty (30 per cent.) is $4,950,000; in round numbers, *five millions of dollars*. If the railways are to go on, in the next four years *they will pay to the government an actual sum of twenty millions!* This is a very heavy amount even in the great outlays in railways; but when we come to consider the mode of payment, this burden is more than doubled.

Let us analyze the *mode* of payments in the construction of railways. The statistics of railways prove that one *half* the cost of construction has been paid for by the creation of an outstanding debt, mostly in mortgage bonds, which have been distributed throughout Europe and America. This half the money paid out, therefore, has not been raised by the stockholders, nor the community in which the road is made, but by capitalists having surplus funds. Again, it may be assumed as a fair average, that 20 per cent., of all the railway stocks, especially in the Western states, has been taken by the contractors, distributed to sub-contractors, paid out for provisions, and thus becomes a sort of medium of exchange in the construction of the work. We have then this result, in the actual payment for construction of railways:

30 per cent. cash, raised by stockholders.
20 per cent. stock paid out for work and labor.
50 per cent raised on bond and mortgage.

In the Valley of the Mississippi, the average cost of railways, when fully equipped, may be called $30,000 per mile, though many are made for less. That $30,000 will be paid thus:

In cash by stockholders	$9,000
In cash by creditors	15,000
In stock distributed for work	6,000

Now of this total, $10,000 per mile has been paid, all in all, for iron. The iron bought in Europe is almost universally bought with bonds; but *the duty is cash*. This *cash tax* is equal to $2,000 per mile. Thus the cash duty per mile, paid to the government, on iron alone, *amounts to 22 per cent. of all the money actually raised by the stockholders!* Again, the stockholders' payments are called in, and distributed during the three years, making 33 per cent. per annum. So that the *cash* duty paid to the government on iron, will amount to *two-thirds of all the stockholders of a Western railway raise in a single year*. To this there may be exceptions; but the history and statistics of the railways constructed in the last five years, show that this statement is very nearly accurate.

The question, then, whether the tax on railway iron is an actual and positive *burden* on the construction of railways, and likely to seriously retard, if not arrest altogether their progress, is fully answered. We have proved—

1. That if the railways begun, go on to completion, they must pay

First. Five millions per annum for the next four years.

Second. They must pay 22 per cent. of all the money actually raised by stockholders, for iron duties alone.

Third. They must pay in *cash* two-thirds of what the stockholders raise in the year of payments.

It is thus very evident, that the payments at the Custom House are now one of the most serious draw-backs on the construction of Western railways, and one which, if there be a continued scarcity of capital, for that purpose, will probably stop many, even the best. Ought not this *burden* to be removed? Is it necessary to the revenue of the Government, or the protection of American manufacture that it should be continued? This we propose to answer, by proving that it is neither necessary or useful to either.

Railroads.

LOUISVILLE AND FRANKFORT RAILROAD.

From the sixth report of the President and Directors of the Louisville and Frankfort Railroad Company, we gather as follows: The receipts from June 1st, 1853, to May 31st, 1854, were $267,070 03. These receipts show an excess or 30¾ per cent. on last year, and those of last year showed an excess on the preceding year, of 21⅝ per cent. The expenses during the last year have been $153,918 92—leaving the net earnings $113,-151 11. The expenses are thus 57⅝ per cent. of the receipts. A dividend of 6 per cent., payable in stock, has been declared; the earnings of the road, which would otherwise have been appropriated to the payment of a cash dividend, having been applied to the construction of switches, new water stations, and for purchase of real estate equal in amount to that sum.

The construction of the Newport branch, as also the construction of the Knoxville branch, have been abandoned for the present, owing to the money crisis.

The company endorsed bonds to the amount of $100.000 of the Lexington and Maysville Railroad Company, but in consequence of in-

creased embarrassments they could not be sold. The President of the Maysville road had, however, pledged 57 of these bonds and 43 bonds of the city of Maysville, for $54,000, to New York bankers. To obtain the $100,000 bonds of the Louisville and Frankfort Railroad Company, the President gave the New York bankers a bonus of $18.000.

The report of the Superintendent, Mr. Gamble, shows that many improvements have been made to the road during the past year. The company has 13 locomotives, 10 passenger, and 123 freight and other cars. The Superintendent adds that the road is in better condition than it ever has been before.

Only one serious accident has occurred, which caused the life of a brakesman, who carelessly attempted to get on a train while in motion.

OPELIKA RAILROAD, GA.

The City Council, says the *Columbus Times*, have passed and confirmed an ordinance granting the Opelika Railroad Company the right of way across the river, and a depot on the north commons. In the former contract, the City Council charged the company $5,000 for the lot, in the latter only $5, with these stipulations: If they ever join their track with any other on the east side of the river, or allow any other track to connect with them, they shall forfeit the depot, the right of way from the river to the depot, and the bridge; all of which in that event, shall revert to, and become the property of the city.

The two hundred thousand dollar bond, by which they were withheld from uniting with any other road, within three miles of the city, east of the river, was annulled, and a clause inserted in the present contract, which forbids the company from moving the bridge or the depot buildings from the place selected and assigned to them. A slight alteration has been made in the tariff of freights and charges. and in no manner are the company to discriminate to the prejudice of Columbus.

We hope soon to see the completion of the Opelika road, and to hear the whistle sound the glad tidings that the waters of the Chattahoochee and the Alabama are united by the bands of iron. What say you, citizens of Montgomery, to a Railroad Festival? Let us unite and shake hands. We have been separated by vast plains, high hills, prairies and cane brakes, but soon we will have annihilated this space, and Columbus and Montgomery will be as neighborly as we are with Macon.

METEOROLOGY.—The last month has been characterized by a most extraordinary degree of heat. On July 5th, the Thermometer stood at 101 deg. in the shade, at Hillsborough, a place elevated 600 feet above Cincinnati.—Wednesday, the 19th, it was 101 deg. in Cincinnati, and on the 20th July, it was 100 deg. at Hillsborough; and with little exception it was intenaely hot for five weeks.

Railroad Earnings.

June, 1853--4.

Macon & Western, - - -	101	15,592 01	19,750 29	4,158 28	22.66

Our table of Earnings for the past month is quite small, despite our exertions to make it more comprehensive. We find that six Eastern roads, 1,380 miles, have increased in the aggregate, - - - - - 237.25 pr. ct.
Or per mile, - - - - - 17.20 "

Nine Western roads, 1,306 miles, have increased in the aggregate, - - 422.22 pr. ct.
Or per mile, - - - - - 32.32 "

Among the Western roads some of the best are not enumerated in the table.

From this exhibit it is evident railroads still continue to be profitable investments, notwithstanding the present low price of shares in the market. The want of confidence, caused by the recent disclosures at the East, is gradually subsiding, and the appearance of railroad matters generally, is much brighter. Now is a good time for judicious investment.

MEMPHIS & OHIO RAILROAD.—The Memphis *Eagle* of the 12th, says: "The Board of Directors met to-day, and the most important business done was the location of the road from Trenton to Paris, passing within five miles of McLemoresville, in Carroll county.

"This will penetrate the wealthiest regions of Carroll, Weakly and Henry, and the road will bring the citizens of these counties within four or five hours ride of Memphis.

"Col. R. Topp, the President, left last evening for the Eastern cities, to negotiate the city and county bonds for the benefit of the contractors, Messrs. Harris, Black & Co.—These gentlemen take our bonds (city and county) at par; but the proceeds are to be paid to them only as the monthly estimates for work, etc., are furnished by the engineer. They are energetic, pushing men, however, and Col. T. is disposed to aid them in selling the bonds at as high a price as possible."

OHIO SALT.

The manufacture of salt is increasing in Ohio, especially in the vicinity of Meigs county. Some three or four years since, a well was sunk at Pomeroy to the extent of one thousand feet, the result of which was salt water of greater strength than any heretofore used in the West. Since then a number of wells and furnaces have been established in that vicinity. West Columbia, spoken of below, is in Virginia. The other places are in Ohio.

The *Pomeroy Telegraph* contains an article on the Salt Manufacture in that vicinity. It places the manufacture at 2,000 bushels a day, to-wit: Pomeroy Salt Co., 700 bush.; Coal Ridge Co., 500; Coalport, 400; and West Columbia 400—or about 600,000 bushels a year. The value, allowing 20 cents a bushel at the yard, is $120,000 a year; the business is yet in its infancy at that place. Two new salt furnaces are now being built, one at Coalport, the other at West Columbia. The salt water is obtained by boring to the depth of 700 or 1,000 feet, and is brought to the surface thro' copper pipes, by means of pumps worked by steam—except at the Pomeroy well, where the water rises to the surface spontaneously.

COAL TRADE OF POMEROY.—The *Telegraph* gives some interesting statistics of the Coal Trade of Pomeroy and that vicinity. In 1843 about 1,000,000 bushels were mined for exportation; in 1847 the number of bushels had increased to 2,000,000; in 1850 to 3,000,000; in 1852 to 4,000,000; in 1853 to 6,000,000; and the number of bushels mined in the first six months of 1854 was 4,500,000—but from increased facilities for mining, etc., the *Telegraph* supposes that there will be a large increase during the latter half of 1854, consequently sets down the product of the mines, during the present year, at 10,000,000 bushels, 1,000,000 of which will be used at home.

THE RECENT DEFALCATION AND FRAUDS IN WALL STREET.

Though Wall Street has witnessed numerous defalcations and financial frauds, yet, none has ever before occurred, where the parties implicated have stood so high, and where the amount involved, the ruin caused, and the sensation upon the public mind, have been so great, as in the case of Robert Schuyler.

Being of one of the oldest families, and having heretofore borne an unblemished and unimpeached character, as a business man and a financier, large operations, and the control of numerous companies were entrusted to his management; but in an unguarded hour he gave way to temptation, and in one short moment all the hard earned reputation of family—of years of honor and integrity, were swept away; and his name has become a by-word and reproach in the places where he was wont to transact his extensive business.

His extended business connections have made it impossible yet to tell certainly, to what extent his frauds have been carried.—The amount already ascertained, cannot fall short of $3.5000,000. Whether this is all or not will be decided only when the investigations now going on, shall be brought to a close.

R. & G. L. Schuyler were officers in, and intimately connected, with a number of railroad and other companies, and this it is, which has so effected confidence, as none can say where the fraud has ceased. Each one now desires to control his own funds, and with great caution only consents to place his means in the hands of others.

Were it so that none but the parties immediately interested in the companies, upon whom the several frauds have been perpetrated, were the losers, it would not seem so deplorable; but, the loss is not confined to these; it unfortunately falls heavily, and onerously upon innocent parties, by causing such a general lack of confidence, as to depress all classes of stock—even the best, to an unprecedented degree. The last week's operations in the stock market, in Wall street, have been sorely pressed, in consequence of this lack of confidence; nor can we hope for better times until the full extent of the over-issues and the consequences shall have been ascertained and determined, which cannot be for some time yet.

Mr. Schuyler's is not the only case recently brought to light; further investigation in his case discovered an over issue of Harlem Stock, to the extent of some $4,000, made by Alexander Kyle, Jr., Secretary of the Company, and appropriated to his own use.—And then immediately upon this comes the fraud of Mr. Edward Crane, President of the Vermont Central Road, to the amount of 8000 shares of stock of that company; and if to this be added the Parker Vein fraud, it will make a nice little show of the financiering ability of some of our capitalists, so considered. The exhibit is as follows;

Stock.	Shares.	Amount at par.
New Haven	20,000	2,000,000
Harlem	4,000	200,000
Vermont Central	8,000	800,000
Parker Vein	17,000	17,000,000
Total		$20,000,000

Can it be wondered at that confidence is unsettled? All of these over issues have been so placed in the market by hypothecation, sale and transfer, as to prevent entirely any possibility of distinguishing the genuine from the bogus issue; thus leaving it a question for the Courts to decide, whether the companies shall be held or not.

It seems wrong that the innocent should suffer with the guilty; or in other words, that roads and companies in no way implicated in these transactions, should feel so strongly the effects of this cause. But so it is; and we trust that it will be a bitter though salutary lesson to railroad companies in future, and that they will cease to put themselves in the power of any one man, how exalted soever his character may be.

IRON BY THE RENTON PROCESS.

We have had several enquiries made of us, in relation to the manufacture of iron, by the Renton Process. The following article may prove satisfactory.

The Forest City Iron Works, manufacturing iron by the Renton Process, says the Cleveland *Leader*, went into operation on the 1st day of July. The *Leader* remarks:

"After encountering a series of difficulties, incident to all new projects, the new principle was put to a final test last Saturday afternoon, and the result was a complete vindication of the sagacity of the projectors and of the skill of Mr. Renton. We had the pleasure of being present during the trial. In a period of three hours, six blooms, varying in weight from 60 to 161 pounds were run off. Within five hours 1,188 pounds were run off, averaging per hour during the first three hours 227 pounds, and during the last two hours 303 pounds. There will be no difficulty in running off three tons of blooms per day, from each furnace, and as the present works will contain twelve furnaces, the product each day, will be about forty tons.

The new process is extremely simple to any one acquainted with the qualities of iron. The portion of ore usually called dross, is more easily melted than the iron; and this fact, probably, suggested the idea of the new process to Mr. Renton. By reducing the ore to about the consistency of coarse sand, and subjecting it to a heat sufficient to cause the particles of iron to cement, the dross is melted and thus separated from the iron which is taken out in masses, called balls, and beaten into blooms. The hammer weighs nearly 10,000 pounds, and the ore crusher possesses such vast power that fifteen tons can be crushed in sixty minutes.

Several scientific gentleman were present during the trial, among them Mr. Foljambe, Mr. Renton, Mr. Houston, who is erecting iron works on the same principle, and a gentleman from Boston, eminent in the literary world. All perfectly satisfied in regard to the result."

THE FRENCH RAILWAYS.

The report of the minister of Public Works for France has lately been published, and is made up almost entirely upon the subject of railways. During the past year charters have been granted for eighteen new lines of road, and for the reconstruction of one old line.—The sum of their lengths is 1,325 miles.—Some of them will add largely to the facilities of commerce with adjoining nations; others will have for their more direct and main effect to develop the native resources of districts hitherto secluded from the advantages of great central markets. They will help to make the "Mediterranean a French lake," and the Rhine a French river, and Paris an Atlantic seaport, in a better way than the old Napoleon purposed. It is observed on the financial side, that these lines are for the most part to be built at the cost and risk of private companies. Five of them only, receive pecuniary aid from the state, the sum total of which amounts to less than eight million of dollars. The calculated cost of construction for all the lines is about ninety millions of our money, plus the eight millions furnished by the state. The cost to the state, of railways chartered previously to February 1848, has been, on an average, $20,000 per kilometre; of those chartered between that date and December 2, 1851, it has been nearly $40,000 per kilometre; of those chartered between this last named date and the close of 1852, it has been $90,000 per kilometre; while of those chartered the past year, the charge upon the state averages but a little over $4,000 per kilometre. The kilometre is about three-fifths of our mile; 3,281 feet accurately. No charters have been granted except on the condition of the pre-payment of two-fifths of the par value of each share of stock. The income of railways in operation is from $26,000,000 in 1852 to $32,000,000 (our money) in 1853; the average product per kilometre the past year was $82,000. During the year a commission, acting under the Minister of Public Works, has been engaged in surveying new routes, measuring in all about 27,000 miles. The ultimate purpose of this measure is to complete the railway network that is to overspread the country, and to extend its benefits to those portions of the national territory which, from their poverty or geological disadvantages, seemed likely to be long deprived of them. The road about Paris, connecting all the railways which have a terminus in that city, is completed and will soon be opened, so that a car freighted at Havre or Bordeaux can proceed directly to Strasburg, or, as will soon be the case, to Marseilles. The entire length of railways in operation and in course of construction in France is about 5,590 miles. Three-fifths of them have been chartered since the Revolution of 1848.

EXPERIMENTS WITH ROBBINS' SELF-ACTING BRAKES FOR RAILWAY CARRIAGES.

An important incident in railway history, says the *London Times*, and one in which the public safety is intimately interested, took place on Wednesday last, (the 11th ult.,) when an experimental run was made from Waterloo station to Windsor, for the purpose of testing the efficiency of Major Robbins' invention for applying self-acting brakes to railway carriages. The train consisted of engine and tender, with a brake van and 16 carriages, only eight of which, however, were furnished with this new contrivance. The object of thus lengthening the train by these eight carriages unfurnished with the apparatus, was to put to a severe test the facility of backing with the self-acting brake—a part of the experiment about which some slight doubt had existed, but which proved, even under disadvantageous circumstances, triumphantly successful. There were present several engineers and men of science connected with the leading railways of the country to witness this important trial. The first stoppage made was at the Wandsworth station, which, being near the Junction, the speed attained did not exceed 20 miles an hour; proceeding at which rate the train was brought to a stand, without perceptible abruptness, in an incredibly short distance. Between this station and Putney, a speed was reached of 35 miles an hour, when a second experiment stopped the train within a distance of 250 yards. It is important to remark that an ordinary train proceeding at this rate could not be stopped in less than 800 yards. The next experiment was tried at a speed of 40 miles an hour, in which the stoppage was effected in 450 yards, and in about 50 seconds of time. On returning from Windsor, fog signals were placed upon the line in situations unknown, till they they announced themselves by their explosion, to any person on the train. On passing over the first, the train was advancing at a speed of 35 miles per hour. The steam was instantly shut off which process alone immediately brings this brake into operation, and the train was brought to a stand at 460 yards from the point at which the signal exploded. Had all the carriages been furnished with these brakes and the experiment thus disembarrassed of the additional *momentum*, caused by the eight unfurnished, there can be no doubt that the stoppages would have been effected in a much shorter time and distance. On the return of the train to Waterloo, it was evident that the trial had proved highly satisfactory. The great difficulty in connection with the self-acting brakes has always been, that of so arranging the apparatus as to allow the engine driver to back his train as occasion might require. The difficulty it would appear, has been entirely overcome by the invention of Mr. Robbins, the train having been repeatedly shunted in the course of the experiments for the purpose of testing its capabilities in this respect.

SURVEY OF THE CHATTANOOGA & CLEVELAND RAILROAD.

Through the kindness of John B. Whiteside, Esq., (says the *Chattanooga Advertiser*,) Assistant Engineer of this route, we have had the pleasure of examining the maps and profiles of the experimental surveys made, as a preliminary to locating the road. The length of the road to Cleveland will be about 29 miles. The nature of the country is such that an air-line cannot be constructed, except at an immense outlay; but by repeated trials, a very direct and practical route has been attained, which, in a general sense may be termed an air-line. The country between Chattanooga and Cleveland is made up of numerous ridges and valleys, at right angles, with the hearing of this road, and hence slight deviations were necessary to reach certain gaps, through which only the line could be constructed. The first route taken involved *two tunnels*, the one through Missionary Ridge of 2,500 feet, and a second some distance from this, of 500 feet, with grades of 80 feet to the mile. This route was thrown aside and another more eastward, running through a gap on the land of B. F. Scott, Esq., in Missionary Ridge, which is passed by a tunnel of only 1,000 feet, and a grade of 50 feet to the mile. It then passes over House's Camp Ground Ridge, which is the highest land between the two termini—Cleveland being only a few feet higher than Chattanooga. Beyond, a line is taken east of the first line, which is some longer, say 2,000 feet, but a tunnel is cleared and the curves and grades are much better, so as to make this route preferred.

Leaving Chattanooga, the C. & C. R. R. will cross *above* the Western and Atlantic Railroad it some 20 feet, so that no collision can occur. This point is 9 miles from this city by the Western & Atlantic Railroad, but only *seven miles* by the Chattanooga and Cleveland Railroad, near which both roads cross Chickamauga Creek by a bridge. This bridge is the *first* on the C. & C. R. R., and the *third* on the W. & A. R. R., so that in running from the same city to this junction, *two miles of road* and *two heavy bridges* are cleared in favor of the C. & C. R. R. route.

Between Chattanooga and Cleveland there will be only *three* bridges which is very favorable, for the country is full of streams, but the line selected avoids bridging the most of them.

The final locating of the road is now in progress, and before many weeks pass, it will be under contract. Robt. Gray, Esq., of Opelika, Ga., proposes to construct the road on terms advantageous to the company, and his offer will probably be accepted. We understand that other responsible contractors have given in bids for the entire road, so that there need be no delay in its construction.

Translated for the Journal of the Franklin Institute.

VERITES ELECTRO-MAGNETIC SAFETY APPARATUS FOR RAILWAY TRAINS.

In a preceding number of the *Journal*, we gave a description of an electric clock, by M. Verite, of Beauvais, extracted from the Parisian journal, *Cosmos*. From the same journal, for 6th January, we take a notice of another invention, by the same author, for the purpose of guarding against accidents to railway trains :

"We will suppose, for the purpose of fixing our ideas, that it is required to regulate the running of the trains on the Northern Railroad from Paris to Amieus. At each end are placed two connected dials, supported on a small pillar of wood or cast iron, one of them facing Paris, the other Amiens, so placed as to be easily seen by the engine drivers when they arrive at the station. Each of them carries a plainly visible needle, and their circumference is divided into as many parts as there are kilometres between the two consecutive stations at which they are placed.—Each of these spaces is numbered beginning with this at the upper part of the dial, which is 0.

Let us suppose that a train leaves the Northern Depot, and that the first station is at St. Dennis, distant from Paris eight kilom.—The dial at Paris will be divided into eight equal parts, and at the departure of the train, the needle will be vertical, its point showing 0. When the train has run one kilometre the needle will pass from 0 to 1; it will pass to 2 when the train has run two kilometres, and so on; so that if the train arrive at St. Denis without interruption, the needle will have described the whole circumference, and will have returned to 0, ready for the departure of the next train. The first locomotive on reaching St. Denis, will come into communication with a second dial, (whose index is at 0,) divided into as many parts as there are kilometres between St. Denis and Engheim, the second station. The train in its progress will operate on the dial at St. Denis as it operated on that at Paris, and when it has reached Engheiem, the index at St. Denis will have returned to 0. And this operation will take place from station to station, until the train reaches the extremity of the line.

In this way the progress of the train may be followed from station to station, kilometre by kilometre. If any accident should happen or any delay in the train, notice will be immediately given by the movement of the hand on the dial, the needle stopping at the same time as the train, will show by the number to which it points, the distance at which the accident has happened.

In general, the service of the most crowded lines does not require that the trains should be running at the same time between any two stations. In fact, the distance between no two stations is more than twenty kilometres at most, which the locomotives run over in less than twenty-five minutes. To suppose that two trains are at any time between the same two stations, it is to admit that the trains are running within twenty-five minutes of each other; but the interests of the passengers, whose safety should be secured as far as possible, as well as the interests of the company, which must take care of their stock, demand, it seems to us, that the trains should not run closer than this.

As then the conductors of the trains will see, immediately on their arrival at the station, where the train ahead of them is, and as they will not quit that station until the needle of the dial, by its return to 0, shows that the first train had reached the next station it will be absolutely impossible for the second train to run into the one before it.

In exceptional cases, where trains have to run more closely than this, and where, in in consequence, two trains may be between the same stations, it will be easy to establish one or two systems of connected dials between the stations.

We will now explain the method devised by M. Verite to secure the motion of the index on the dials.

Behind each dial is a wheel, with a number of teeth equal to the number of kilometres between the two stations. This wheel is governed by an escapement, which allows one tooth to pass every time that it is moved.—The escapement is put in motion by the attraction of an electro-magnet, operated on by a current, which is closed by the locomotive itself, every time that it has run one kilometre.

One of the poles of the battery is put in communication with a wire, hung like our ordinary telegraph wires, upon posts, along the track. At every kilometre a branch of this wire is taken down and terminates by an inclined plane near the rail; the other pole communicates with the ground, or, still better, with one of the rails of the track. The locomotive or tender is also supplied with a moveable piece of metal, terminating in an inclined plane, and so placed as necessarily to meet as it passes the inclined planes in which the conducting wires terminate. Thus, with whatever speed it may be running, on arriving at the end of the kilometre, the locomotive will always close the circuit; the closed circuit will magnetize the wire, which will work the escapement, the escapement will pass one tooth of the wheel, and the index moving forward one number will indicate that the train has made one kilometre more.

If it be required to prevent the much more rare accidents caused by the collision of two trains moving in opposite directions, on the same track, special dials may be placed and properly arranged, on which the conductors may read as they pass, the distance which separates them from the train moving towards them. They will then slacken their speed, or take other means to avoid the collision.

M. Verite has constructed, in his shop at Beauvais, a model on a small scale, of the apparatus which we have described. This apparatus succeeds so well as to render him almost certain of its success on a large scale. He is now ready to apply it on a line of railroad, as soon as he may be invited to do so by his Excellency, the Minister of Public Works." *Cosmos*, vol. iv., p. 7.

Hempfield Railroad.—Our Wheeling exchanges say, "We regret to learn that the strike for wages continues on many sections of the Hempfield railroad. Though the hands returned to their work on some of the heaviest sections last week, at the rates offered, they have again, to a considerable extent, withdrawn.

We understand, however, that the engineers are confident that the workmen will be compelled to come to terms when they find the condition of neighboring lines.

The work on the Allegheny Valley road, and many of the Western roads, is entirely suspended for want of funds, and laborers will cheerfully take 90 cents a day when they find that work is not to be had elsewhere at any price.

LOUISVILLE & SANDUSKY, JUNCTION, RAILROAD.

The Sandusky *Commercial Register* in speaking of this project, and the Record, says:

"It is needless to advise the Cincinnati public that this great road will be built at an early day, without any aid or sympathy from the press of that city; and such illy timed representations, as this of the *Gazette*, come with a very bad grace. This place, and routes entering here, have never received justice at the hands of the *Gazette*, or that grossly partial sheet — the *Railroad Record*;—but since we neither need nor solicit their aid, their misrepresentions are as powerless as they are ungrateful."

We trust that the *Register* man will keep his temper, this hot weather, and endeavor to tell the truth when speaking of his neighbors. The Record has spoken of this road a number of times, and *misrepresented it* in no instance. As to our *partiality*, it consists in noticing a great many roads and people to which and to whom we are under no obligations.

Experiments with Self-Acting Signals.—The self-acting signals are being adopted on French lines. *Galignani* speaks of an experiment made in presence of a commission on the Bordeaux and Triest railway. The invention consists of mechanisms placed on the external edge of the rails, and united together by an electrical wire, which gives the signal of the arrival of the train on a curve or in a tunnel. The apparatus may be established in such a manner as to act not only at a distance of 700 metres, but even 3000 metres. The passage of a train on entering on a curve or on approaching a tunnel, causes, by the pressure of the springs of the apparatus, the explosion of petards, which are heard at a great distance, and at the same moment moves a colored disk, which gives the signal to the approaching train to stop.—*London Builder*.

Ashtabula & New Lisbon Railroad.—At the annual meeting of the stockholders of this company, held at Ashtabula on the 4th inst., the following persons were chosen directors for the ensuing year: Henry Hubbard, Frederic Carlisle, G. W. Griswold, and Aaron E. Austin, of Ashtabula county; Frederick Kinsman, of Trumbull county; John Whetmore of Mahoning county; L. A. Brewer, of Columbiana county. The prospects of the road are reported as favorable.—*Trumbull Democrat.*

Gallipolis, Jackson & Chillicothe Railroad.—From an advertisement in the Gallipolis *Courier*, we learn that there was to have been an election of directors of this company on the 19th. We cannot hear, however, that any thing is being done upon the road.

Trial of the Strength of Bridges

A large number of gentlemen, says the New York *Times*, assembled on Tuesday afternoon at the Crystal Palace, to witness an exhibition of strength of two models of bridges, which have been for some time displayed at that place. The models were perfect in their construction, being in every particular, except as to size, like a practical bridge.—They were the Arch Truss Bridge, invented by Henry Lanergan, of Boston, and the Uncle Sam, invented by Hammond Howe of Cincinnati. They were models of Bridges of four hundred and fifty feet span. The models were about sixteen feet span, and the sides about a foot high. Both were constructed of white pine, and presented a very attractive appearance. The Uncle Sam model weighed 64 pounds, and the Arch Truss 61 pounds.—The inventor of the former had announced that his model would sustain twice the weight of the latter; or be broken in the attempt.—The weight on the Arch Truss was from time to time increased until three thousand and four ponnds and a half were put npon it.—The weight on the "Uncle Sam" was then increased to six thousand and sixteen pounds. For a few moments the bridge sustained this immense pressure—nearly a hundred times its own weight—but soon after the timbers broke. Subsequentlyabout five hnndred pounds weight more was added to the pressure on the Arch bridge but without its breaking. Its strength was not tested further.

Rock Islann Railroad.—We learn from the New York *Tribune* that the contractors, Messrs. Sheffield & Farnum have delivered the road to the Company. Henry Farnum, Esq., was subsequently elected President of the company. The interests of the road could not possibly have been committed to better bands. The untiring energy and consummate ability which he has shown in building and equipping an entire line of railroad, one hundred and eighty-one miles, in about two years, are sufficient to mark him as one of the first railroad men in the Union. Under his management the road will be sure to prosper.

Scioto & Hocking Valley Railroad.—The gross receipts of the Scioto and Hocking Valley Railroad for the months of May and June, were $15,328 41. Net earnings $11,000. Efforts are now making to complete the road from Jackson to Newark, the grading being mostly completed.

Mississippi & Missouri Railroad.—The election of officers of this road, held at Davenport recently, resulted in the election of Hon. John A. Dix, of New York, President; and E. Cook, Esq., of Davenport, Vice President.

TABLE OF RAILROAD BONDS, WITH MARKET VALUE.

CINCINNATI STOCK SALES.

AT THE STOCK BOARD,

MERCHANTS' EXCHANGE

And at Private Sale.

BY HEWSON & HOLMES,

For the week ending Wednesday, July 26, 1854

No report.

MONETARY.

At the East there is no especial change in the rates for money, though the commencement of a better feeling is appareut. Money is readily to be had on strictly prime paper, at 9 a 10 per cent., and on call at 6 a 7 per cent.

The downward tendency of the Stock Market has been checked, and a much better feeling is apparent.—The falling off in Stocks has been sudden and severe.—We subjoin a table of some few of them:

	July 1.	July 19.	Fall
Erie Railroad	63	46¾	16¼
New York Central	99½	89	10½
Michigan Central	95	88	7
Reading Central	78	64	14
Nicaragua	28	19¼	9
Cleveland and Toledo	87	70	17
Canton Company	25	22	3
McCulloch Gold	4	1½	2½
New Haven Railroad	82	shut.	
Harlem Railroad	46	shut.	
Hudson River	62	51	11

Tho sales have been as follows:

By A. H. Nicolay, July 17th—

$3,000 Bonds Cleve. & Pitts. RR. 7s. '73 conv.	$79 00
7,000 Gr. West. Ills. 10s, '68	86 50
10,000 N. Y. & New Haven 7s	53 00

The above were with interest.

By the same, 20th—

1 Original share Breckenridge Coal Co., equal to 280 present shares. Sold in quarters of 70 shares, per quarter	1,750 00
3 " " " " "	1,500 00
16 Bonds $500 each, City of Stockton, 10s. '73	69 00
4 " 100 " " " "	79 00
$10,000 Bonds N. Y. & Haven, 7s, '66	66 00
5,000 " " " " "	69 00
3,000 " " " " "	71 00
2,000 N. Y. & Harlem 7s. '73	87 50
5,000 " " " "	82 50
6,000 " " " "	82 00
5,000 " " " "	81 50
5,000 Flushing R. R. 1st mor bonds 7s. '68	64 00
5,000 " " " "	71 00
5,000 Sec. Av. 7s. '59	69 00
5,000 " " "	64 50
15,000 Mineral Point, 7s	20 00
All the above with interest.	
290 Shares Danbury & Norwalk RR	60 50
100 Shares New Haven & N. London	20 50
200 Shares New Haven & Northampton	36 00
250 Shares Rutland & Whitehall	23 00
1,000 Shares N. Y. & Harlem (pref. full)	85 00
4,500 Shares Ill. Central ($5 per share paid)	105 25

At the West nothing new has occurred in the Money Market. There is a good deal of money, and demand for prime paper is in advance of the supply. Rates 10 a 11 per cent. for number one, 12 a 18 for less known.

Eastern Exchange has advanced to 1¼ to 1¾ prem.

Sales of Stock, etc., have been quite limited and prices merely nominal.

Cincinnati, Harrison & Indianapolis Straight Line Railroad,

NOTICE is hereby given that the annnal meeting of the stockholders of the Cincinnati, Harrison & Indianapolis Straight Line Railroad Company, for the election of Directors, and for such other business as may come before them, will be held at the office of the Company in Cincinnati, on THURSDAY, the 10th day of August next, at 10 o'clock A. M. The Polls for said election will be kept open from 10 o'clock, A. M., to 4 o'clock, P. M., of said day By order of the Directors.

jy.20-1t J. W. TABER, Sec'y.

Address ENOCH JOHNSON,
Sup't C., Z. & C. RR.
jy.20-tf. Akron, Ohio.

Covington and Lexington Railroad.

OPEN to Cynthiana, 66 miles. Two Daily Passenger Trains.

On and after Thursday, May 25th, and until further notice, Trains will run as follows:

Express Train leaves Covington at 8 o'clock, A. M. stopping at Benton, Demossville, Butler, Falmouth, Callenville, Boyd's, Berry's, Robinson's and Garnett's only, and arriving at Cynthiana at 11.50 A. M. Returning, leave Cynthiana, at 1.30 P. M., stopping at the above stations, and arriving at Covington at 5.30 P. M.

Passengers for Paris and Lexington, by taking the above train, will take dinner at Cynthiana. and by Messrs. Thurston and Thompson's line of Omnibusses, will reach Paris at 4 o'clock, P. M. The Evening Train of the Maysville and Lexington Road, leaves Paris at 5 o'clock, P. M., enabling passengers by this route to reach Lexington at 6 o'clock, P. M. Returning, leave Lexington by the 7 A. M. Train of the Maysville and Lexington Road for Paris, leave Paris by Messrs Thurston & Thompson's line of Omnibusses at 8.30 A. M. arriving at Cynthiana in time for dinner, and connect with the train for Covington at 1.30, P. M., arriving at Covington at 5.30 P. M.

Accommodation Train leaves Cynthiana at 6 o'clock A. M., stopping at all regular and flag stations upon the road, and arriving at Covington at 10.10 A. M. Returning, leave Covington at 3.15 P. M., stopping as above, and arrive at Cynthiana at 7.40 P. M.

Passengers by this train can leave home in the morning, pass five hours in Covington or Cincinnati, and return home before dark.

The Express Train will stop only at the stations named. Passengers for other points must take the Accommodation train.

Freight trains, for the present, will leave Covington Moodays, Wednesdays and Fridays; leave Cynthiana Tuesdays, Thursdays and Saturdays.

Freight will be received at Covington and Cynthiana up to 4 o'clock P. M., for the train of the following morniug.

J. M. DOUGHERTY,
jy. 20. Superintendent.

OUR RAILROAD MAP---NEW EDITION.

We have now ready a new and revised edition of our RAILROAD MAP, containing corrections and additions from reliable sonrces, making it as reliable as it is possible to make such a map.

We are prepared to print maps for Railroad Companies to illustrate their reports, either from the stone as it now is, or make any alterations to suit parties. Railroad Companies will find this much more economical than getting up maps especially for their roads.

Price of maps as follows:

Plain, sized,	40 cents.
Colored in outline,	50 "
Colored in States,	75 "

A liberal discount where a number are taken.

jy.13.

Wabash Valley Railroad Company.

NOTICE TO CONTRACTORS.

SEALED proposals will be received at the office o Allen, McGrady & Co., Vincennes, Ind., until the 25th of July, 1854, for the grading, bridging, masonry, furnishing cross-ties, and laying the track of the entire line of the Wabash Valley Railroad, extending from Vincennes, Ind., to Paris, Ill., a distance of sixty-six miles.

Plans, profiles and specifications are ready at the office of Allen, McGrady & Co., Vincennes, and also at the office of the Company, Marshall, Ill.

The line passes through a densely populated and highly cultivated country, affording every facility for obtaining supplies, and conveniences for carrying on the work.

The work is of an exceedingly favorable character and well worthy the attention of experienced contractors.

Contractors are especially rsquested to give the work personal examination before submitting their propositions.

The work will be divided into sections of about one mile each for the convenience of contractors, and bids will be received for the whole or any portion of the work, reserving the right to reject any or all propositions if deemed unreasonable.

Bids will also be considered for the payment of the work to be either all cash or part cash and part stock.

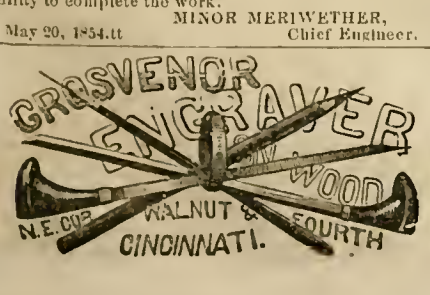
A. T. ELLIS, President.
CHAS SUMMERS, C. E.
jy.6-3t. ALLEN, McGRADY & Co.

HEWSON & HOLMES

HAVE Auction Sales of Stocks, Bonds, and other Securities every WEDNESDAY and SATURDAY, at 12 o'clock, at the

Merchants' Exchange,

And respectfully tender their services in effecting private sales of the same, and in the negotiating of loans.



Offices, Nos. 83 and 85 Walnut Street,
CINCINNATI, OHIO.

je.8-†

NOTICE TO CONTRACTORS.

PROPOSALS for the entire Construction and Equipment, or the graduation, bridging and masonry separately, either in whole or in part, of the Mississippi and Tennessee Railroad, (extending from Memphis to Grenada Mississippi, about 97 miles,) will be received at the office of the company in Memphis, till the 20th of July next. Proposals for the entire construction and equipment, and otherwise as favorable, will have preference. Profiles and estimates of the first 60 miles may be seen on application at the Engineer's office in Memphis. Bidders must furnish satisfactry evidence of their ability to complete the work.

MINOR MERIWETHER,
May 20, 1854.tt Chief Engineer.

South-East corner of Main and Fourth Sts., Cin.
m r3

To Railroad Contractors, Quarry Men, &c.

THE attention of those interested is called to ASH'S IMPROVED HORSE POWER ROCK DRILL, for Railroad Excavation, Stone Quarrying, Well Boring &c.

This Drill is worked by HORSE POWER, requiring but one horse and one man, to keep it constantly at work, with great ease and velocity, performing 60 strokes per minute. It is cheap of construction and repair. The AUGER weights from 300 to 500 pounds, will drill a perpendicular or inclined hole FOUR INCHES IN DIAMETER, at the rate of from 8 to 16 feet per day in ordinary lime stone. It has drilled 2 feet in one hour.

For rights to use for Counties or States, apply to the Patentee. WILLIAM F. ASH,
May 20, 3* Springfield, Ohio.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railrouds now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to

WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York,

And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

J. B. FORD is the Company's Receiving Agent at Wheeling.

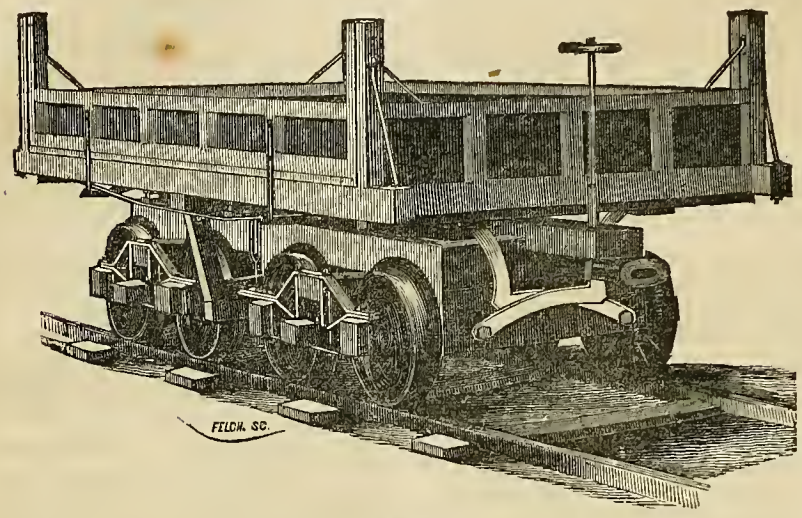
BAILEY'S PATENT DUMPING CAR.

Fig. 1.



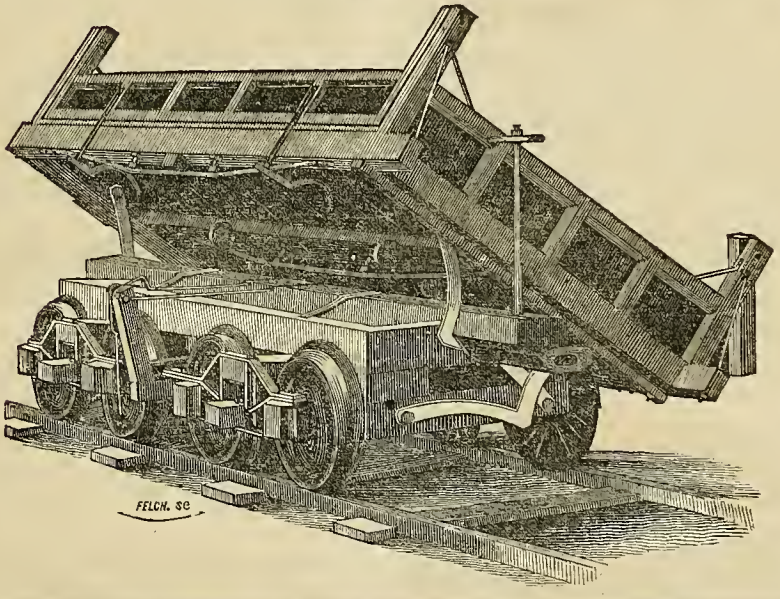


Fig 2.

The above engravings are views of a most important improvement in Railroad Dumping Cars. A patent was granted to C. P. Bailey for the improvement, January 24th, 1854.

Fig. 1 is a view of the car ready to receive the load.

Fig. 2 when dumped, or the load discharged.

This improvement has been in use on the Central Ohio Railroad for several months; also, on the Cincinnati, Hamilton & Dayton; Cleveland, Zanesville & Cincinnati; Cleveland & Columbus; and other Railroads in this state. Also upon the Illinois Central, in Illinois.

The improvement consists mainly, in the adoption of the Wrought Iron Transverse Bars, instead of the Cast Iron Rockers, generally in use. There are, however, other details of importance.

The box or body of the car rests on the ends of the Transverse Bars, whose other and lower ends are attached to the frame of the truck; two of the (wrought iron) bars are used at each end of the cars, to support and operate as guides in dumping the car. This improvement can be applied equally as well to the four-wheeled as to the eight-wheeled car.

One man will dump this car with ease when loaded, in less time than ten men can dump the rocker car, (the long or eight wheeled car is alluded to.) Contractors who have been using it, state that in graveling roads, **it is a saving of two cents per yard,** over the rocker car—that it is a much safer and easier car to manage, preferring it to any other car now in use for similar purposes.

Its liability to get out of repair is not one-tenth that of the Rocker Car. It is also well calculated for carrying and unloading Coal, Lime, Plaster, and all such materials as are carried in Dumping Cars—giving greater inclination in dumping, and discharging the load with greater facility than any other car.

The attention of Railroad Companies wanting Gravel Cars, as well as Coal Cars, is respectfully solicited to this improvement. The cost of this car does not exceed that of the Rocker Car,

To Railroad Companies and Car Builders who wish to purchase Rights, or wish information on the subject, letters addressed to me at Columbus, Ohio, will receive immediate attention.

GEO. L. CHASE.

Columbus, Ohio, June, 1854. Sole Agent for the United States.

TESTIMONIALS.

Engineer's Office, C.O. R. R.
Zanesville, Ohio, Nov. 21st, 1853.

Charles P. Bailey, Esq.,

Dear Sir:—At your request, some two months since, I caused to be placed on this road two of your newly invented Gravel or Dumping Cars. From what I have seen of their work I am clearly of the opinion that they will soon supercede all others of the kind now in use.

We have had the long car filled to its utmost capacity with the various kinds of excavation, and placed it in every position, and one man would dump it with ease in ten seconds, whereas, with the ordinary Rocker Car, it takes ten men one minute to perform the same labor.

The Car is simple in construction—not liable to get out of repair, as there is but little cast-iron about it. It tips to a greater angle than the ordinary car, therefore leaving its load in a better shape. I have no hesitation in saying that when more cars of the kind are wanted on this road they will be built after your model.

Wishing you every success in your undertaking, I remain, with great respect,

Yours, &c.,
GEO. T. CLARKE,
Chief Engineer.

I have purchased for the use of this company, two Gravel Cars, built after the plan of Mr. Bailey, and fully agree in the opinion above expressed.

HENRY O. AMES,
Sup't Cin., Ham. & Dayton Railroad.

I fully agree in the statement made by the gentlemen in this letter, and may also state that they are the best Gravel Cars ever built, in my opinion.

DANIEL McLAREN.
Mast. Machinist Cin., Ham. & Dayton Railroad.

Zanesville, Dec. 21, 1853.

Charles P. Bailey, Esq.,

Dear Sir:—From an experience in using your Improved Dumping Car, we have no hesitation in saying that two cents per yard is saved, (in labor and time) by using your car instead of the present Rocker Car.

That the repairs incidental to your car are not one-tenth of what they are on the Rocker Car.

That it is much the most profitable car for contractors as well as the safest one for laborers to use, being easier to handle.

We consider it superior, in every respect, to all other cars of the kind now in use.

Yours, truly,
E. NEWCOMB
C. BARRET.
Cont'rs for grav. East. Div. C. O Railroad.

I have seen the car above referred to at work, upon the Eastern Division Central Ohio Railroad, and fully concur with the opinion of Messrs. Newcomb & Barret

E. B. DUVAL,
Mast. Machinist, Central Ohio Railroad.
Zanesville, December 21, 1853.

Zanesville, Dec. 22, 1853.

Mr. C. P. Bailey,

Dear Sir:—As you desire my opinion of your Improved Dump or Gravel Car, that has been in use for the last three months on the Central Ohio Railroad, I do not hesitate to recommend it as being the best plan for a Gravel or Dump Car I have ever seen. The bills for repairing Dump Cars, such as are now in general use, it is well known, constitute a serious item of expense. On this account alone, your plan deserves a preference over all others, as there is but little liability about your car to any such accidents as are constantly occurring to the others. It dumps to a greater angle, and one or two men can dump it in less time, and with greater ease than the ordinary Rocker is dumped by ten or twelve men.

It will give me pleasure to recommend it as superior to any improvement of the kind in use.

ROBERT MACLEOD.
Chief Engineer, P. M. & C. R. R.

At a meeting of the Ohio Association of Railroad Superintendents, held at Cincinnati, March 8, 1854, the Committee appointed to examine Bailey's Patent Dumping Car,

REPORT,

That they have examined the Car, and consider the improvement a valuable one; and would recommend to any members of the Association who may need Gravel Cars, to examine and test this Car, before purchasing elsewhere.

W. H. CLEMENT,
For the Committee.

Clev Col. & Cin. and Clev. & Erie R. R.
Supt.'s Office, Cleveland, O., Apr. 24, 1854.

Mr. Charles P. Bailey,

Dear Sir:—Two of your Patent Dumping Gravel Cars have been used on the Cleveland, Columbus & Cincinnati Railroad for several weeks, and I am so well satisfied that they are better than any others, that I have just ordered thirty more of the same sort,

Respectfully,
L TILTON
Sup't.

WINSLOW'S
PATENT COMPOUND RAIL.

THIS RAIL, which is represented by the above, bas now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a

THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are—a saving in the wear and tear of Machinery—it saves, to a great extent, in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable Being practically a continuous Rail for the entire length of the road, without break at the ends of bars, the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effects upon Cars and Machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at Hanging Rock Iron Works, upon the Ohio River, and at Mt. Savage Iron Works, Maryland. Specimens of the Rail and pattern of the same will be gladly shown, as well as information in relation thereto, given by application to

MUSKINGUM WORKS,

ZANESVILLE, OHIO.

DOUGLASS, SMITH & CO.

WOULD respectfully call the attention of Railroad Companies to their establishment at Zanesville They are prepared to execute orders, on short notice, for

Passenger Cars of the most superior description,

Second Class Passenger, Mail Express, and Baggage Cars; Freight, Cattle, four or eight wheeled Gravel Cars.

We manufacture a superior

CAR WHEEL,

Over 2500 of which are now running on the Central Ohio Railroad, and many of these have been in use on the road over two years, having in that time only three to crack, and two to be renewed in consequence of the wearing of the Chill. We have also commenced the manufacture of the celebrated

WASHBURN WHEEL,

And are prepared to furnish this wheel, with or without axles. Also, castings for Cars fitted to order at the shortest notice.

BOLLMAN'S PATENT IRON & WOOD BRIDGE.

We are also agents and builders of the above celebrated Bridge. Are now placing upon the piers an iron bridge on this plan over the Muskingum river at Zanesville. We are ready to contract with companies for the construction of this Bridge. All orders addressed

DOUGLASS, SMITH & CO.,
au4tf. Muskingum Works, Zanesville, O.

Lightner's Patent Axle Boxes for Railroad Cars.

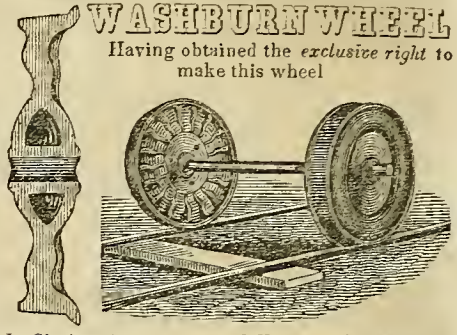
THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Reservoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.



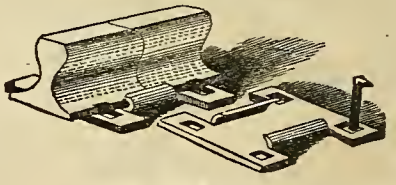
Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,
PRINCIPAL AGENT,
May 18.6* Office, No. 167 Broadway, New York.

FULTON CAR WORKS,

CINCINNATI, OHIO.

THE Proprietors of this establishment would respectfully call the attention of Railroad Companies in the West and South to their establishment at Cincinnati.—Their facilities for manufacturing are extensive, and the means of transportation to the different points speedy and economical, They are prepared to execute to order on short notice, eight-wheeled Passenger Cars of the most superior description. Four or eight-wheeled Baggage, Cattle, Freight and Gravel Cars. Also, Crank and Lever Hand Cars, Trucks, Wheels, and Axles fitted.



Having obtained the *exclusive right* to make this wheel

In Cincinnati, Covington and Newport, they are now prepared to furnish Railroad Companies with that Celebrated wheel, with or without Axles. Also, Journal Oil Boxes of any pattern, and Castings for cars fitted to order at the shortest notice.

Address KECK & HUBBARD.
Fulton Car Works Cincinnati, Ohio.
ap.12 Office 62 East Second Street.

RAILROAD SPIKES,

WROUGHT IRON

Chairs and Fastenings.

THE subscriber continues to manufacture with increased facilities, Hook and Flat-Head Railroad Spikes, and wrought Iron Chairs of any pattern, either punched or plain. The best quality of Iron is used, and the articles are guaranteed to give satisfaction in every respect. We are prepared to fill orders for any quantity with dispatch, and at the lowest market prices.

All communications addressed to us will meet with prompt attention.

SMITH & TYSON,
No. 25 South Charles Street, Baltimore.

J. DAVENPORT.... M. D. WELLMAN.... C. M. RUSSELL.

DAVENPORT, RUSSEL & CO.,

Railway Car Manufacturers,

MASSILON, OHIO.

THE subscriber, late of the firm of Davenport, Bridges & Co., Fitchburgh, Mass., having associated himself with Messrs. Wellman and Russell, under the above name, would respectfully solicit calls for any kind of Passenger, Baggage, Post Office, Freight, Coal, Gravel or Hand Cars.

Having had fifteen years experience in the business and having secured the best of workmen from the Car Factory in Cambridge, Mass., I feel confident that perfect satisfaction can be given in all work entrusted to our care.

We have now on hand the best of dry White-Oak with which we think we can build Cars as cheap and as well as any other establishment in the States.

Feb. 16†* JOSEPH DAVENPORT.

ENGINEERS' & SURVEYORS' INSTRUMENTS!

JAMES FOSTER, Jr.,

MATHEMATICAL AND PHILOSOPHICAL

INSTRUMENT MAKER!

HAVING removed from his old stand to south-west corner of Fifth and Race street, and increased his facilities for making instruments, is now ready to supply Levels, Transits, Theodolites, the Dnmpy or Gravatt Level, Circular Protractors of Troughton & Simms model, Surveyors Compasses, Pocket Compasses with and without sights, in great variety. Measuring tapes of all kinds, Magnets, Magnifyers, Barometers, Spy Glasses, &c., &c. Repairing promptly attended to. ap.6-3*.

Railroad Line.

Cincinnati, Hamilton & Dayton Railroad.

Summer Arrangement.

COMMENCING WEDNESDAY, JUNE 20th, 1854.

TRAINS will run by standard time, which is seven minutes faster than that of Cincinnati.

First Train

At 6 o'clock, A. M., Lightning Express for Dayton, Crestline, Pittsburgh, Philadelphia and Baltimore.

Second Train

At 6.10 A. M., for Hamilton, Richmond, Indianapolis, Terre Haute, Lafayette and Chicago, direct.

Third Train

At 8.20 A. M., for Dayton, Sandusky, Toledo, Detroit, Chicago, Cleveland, Buffalo, New York, Boston, Pittsburgh, Philadelphia, Baltimore and Washington.

Fourth Train

At 2 P. M. for Dayton, Greenville and Union.

Fifth Train

At 3.30 P. M., for Hamilton, Richmond, Indianapolis, Terre Haute, Lafayette and Chicago.

Sixth Train

At 5 P. M., for Dayton, Troy and Piqua, and intermediate stations.

Seventh Train

At 6.30 P. M., for Hamilton and intermediate stations.

The 1st Train, Express,

Will stop only at Hamilton and Middletown.

2d, 3d, 4th, 5th and 6th Trains,

Will stop at all regular stations.

The Seventh Train

Will stop at all way and flag stations.

The 1st Train

Will connect at Crestline at 12.30 P. M., with the Ohio & Pennsylvania Train for Pittsburgh, Philadelphia, Baltimore, etc., forming a direct and continuous line for each of these cities. Cars run through to Crestline without change. Baggage checked to Pittsbugh.

2d Train

Will connect at Richmond at 9.05 A. M., with Train of Indiana Central Road for Indianapolis; arrive at that place at 12 M., thence to Terre Haute, Lafayette, or Chicago without detention. Time as short as by any other route.

3d Train

Will connect at Dayton at 10.45 A. M., with Mad River Train, and arrive at Sandusky at 4 P. M., and go immediately on board the splendid steamers **St. Lawrence** and **Mississippi**, to Buffalo; thence at 7.30 A. M., with Buffalo and N. Y. City Road, to New York; arriving at that place at 10 P. M., also at Crestline 4.20 P. M., with Ohio and Penna. Train for Pittsburgh, Philadelphia, Baltimore and Washington.

The Same Train

Will also connect at Clyde with Cleveland and Toledo Train to Toledo, Chicago and intermediate points; and at Sandusky at 5 P. M., with steamer **Bay City**, for Detroit. Also, with Dayton and Michigan Railroad to Troy and Piqua, and at Piqua with Doyle & Co's Canal Packet Line to all points on Wabash and Miami Canals.

Fourth Train

Will connect at Dayton with Dayton and Greenville Railroad to Greenville, Union, and all points on Bellefontaine and Indianapolis Railroad.

Fifth Train

Will connect at Richmond at 6.40 P. M., with Indiana Central Train for Indianapolis, Terre Haute, Lafayette.

Passengers will bear in mind that the following rates of fare, via Lake Steamers, include both Meals and Staterooms, and that the fare to Philadelphia and Baltimore is One Dollar cheaper, and one less change of cars than by the Columbus route.

TESTIMONIALS:

OFFICE OF THE G. & C. U. RAILROAD CO.,
CHICAGO, FEB. 20TH, 1854.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—All of the prineipal station buildings on this road are furnished with your Depot and Platform Scales, with the exceptions of two scales. Your Scales were adopted after trial with those of other makers, and I take pleasure in now saying, that after more than four years trial, they have given entire satisfaction to us, and the public doing business with the Company.

I am not aware of a dollar's expense being incurred from wear or defect of materials in any part of the scales. The Track Scale, with suspended platform, which you have recently put into our principal depot at this place, judging from present appearance and the use to which it has been put, will, I doubt not, answer the purpose desired, and be equally satisfactory.

JOHN B. TURNER,
Pres't and Sup't.

CENTRAL RAILROAD CO.
SAVANNAH, JAN. 6TH, 1853.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.

DEAR SIRS:—Your Scales, which we have used for many years, gave so much satisfaction, that we ordered from your House, all the Scales necessary for our large new Warehouse. Your agent has just finished putting up twenty-two of your No. 1 and No. 2 Depot Scales and a large Road-Scale, and I am pleased with the manner in which the job has been done. I trust and believe that this work will do credit to your establishment.

Respectfully, your obedient servant,
R. R. CUYLER, Pres't.

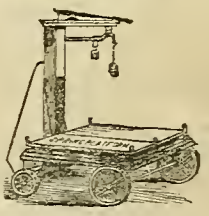
PORT RICHMOND, PA. MARCH 2D, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.,

GENTLEMEN:—There are now in the Richmond Wharves at the terminus of the Reading Railroad, Twenty-six of your ten ton Track Scales, which have been in constant use for more than six years. The least quantity of Coal weighed annually upon any one wharf has been 400,000 tons. The aggregate quantity weighed upon the twenty-six scales, has been more than one million two hundred thousand tons per annum.

During the time since they have been in use, they have always retained their adjustment without any expense for repairs. They have been tested every year by the Sealer of Weights for the county of Philadelphia, and always found correct, and at the present time their operation is apparently as perfect and as sensitive as when first built.

JOHN E. HOBERT,
Superintendent of Wharves.



STATE OF NEW YORK,
CANAL COMMISSIONERS OFFICE,
ALBANY, JUNE 21, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—Your favor of the 10th, asking my views of the Weigh Lock Scales, manufactured by you, and introduced upon the Erie Canal, is received.

I have no hesitation in saying, that they have fully answered your recommendation in every particular. Their capacity for strength is fully equal to sustain the required burthen. They are not liable to get out of adjustment or repair. The arrangement of the Weighing Beam is admirably adapted to obtain rapid results. I know of no Scale superior to them, in this or any other country.

In great haste, Yours truly,
JOHN C. MATHER,
Canal Commissioner.

THE REMISSION OF DUTY ON RAILROAD IRON, AND ITS EFFECTS.

In our former article we proved :

1st. That the tax, or duties, on imported railway iron was, at the present time, equal to *five millions per annum.*

2d. That this is equal to 22 per cent. of the money actually paid by stockholders, or nearly 7 *per cent. of the entire cost of a railway.*

3d. That, as stockholders' payments are distributed during three years, and this is a *cash payment at once*, it is equal to 66 per cent. of the payments by stockholders in one year.

It follows from this statement of facts, that the tax on railway iron is a *real and great burden* on the construction of railways, which will operate seriously and heavily against the completion of works already commenced, and may arrest them altogether. On this state of facts the question arises, for whose benefit is this tax laid? Is there any benefit arises from it? Are either the Government, the American manufacturer, or the people benefitted? If no one is benefitted, then why should the tax continue? These are the questions to be asked and answered by a statesman, before he is competent to decide this case. They are reduced to these two: Does the revenue need the tax? Do the American iron owners, or manufacturers need it?

First. Does the revenue need it? The answer to this will be found in the statistics of the Treasury department, and we propose to show precisely what has been the effect of the duty on railway iron on the revenue.

	Bal. of Rec'ts over Expenditures.	Duty on Railway Iron	Balance in the Treasury deducting Railway Tax.
Year ending—			
30th June, 1852	$3,720,750	$1,670,495	$2,050,250
" " 1853	7,310,656	3,721,600	3,589,056
" " 1854	8,000 000	4,000,000	4,000,000
Aggregate	$19.031,406	$9,392,095	$9,639,309

It thus appears that if in the last three years the entire railway tax, amounting to nearly ten millions, had been *taken out of the Treasury*, there would be about *ten millions balance remaining!* In other words the Treasury had no possible use for this money; but on the contrary, it was a severe burden on the Government for its safe keeping—having no more value than dry chips. That this may be put in a clear light, we present the following official statement of Treasury operations:

Balance in the Treasury	
July 1, 1851	$10,911,645
" 1, 1852	14,6:2,1:6
" 1, 1853	21,942,892
" 1, 1854	29,000,000

This enormous balance remains at the present time, after paying more than twenty millions of dollars of the public debt, and having all the expenses of government greatly increased. What, then, has become of ten millions of the tax raised on railway iron in the last three years? It has *remained untouched to the present moment, lying in gold, idle, without one cent of interest!* The operation of this tax has been then, to take ten millions in coin from the railways, to keep it idle, untouched, and to take from the mercantile transactions of the country full *thirty millions of credit, based on this coin, if it had been distributed.* The revenue not only does not need this tax, but it is a real burden; while it has cut the country with a two-edged sword—first, by taking it from the construction of railways; and secondly by taking so much coin from the general basis of credit.

Second. If this tax has done the Government and the peoplo no good, has it done the miner and manufacturer any good! If it has, it may be claimed to have compensated, in one form, the injury done in another, and upon the whole, the country is benefitted. This is the argument of a statesman, but it rests entirely upon a matter of *fact*; and if, in fact, this tax has *not* benefitted the miner or manufacturer, then the argument falls to the ground, and cannot fairly be maintained. Now the facts of the case are obvious, and we propose to exhibit the precise bearing of the tax on railway iron, if it has any on the iron manufacture. Let us premise however, some observations on the popular aspects of the iron duty. In the first place, we should observe that the duty on railway iron, is not the duty on iron manufactures generally, but is the duty on a particular form of iron, viz: *bar iron made for rails*; coming under the general tax, 30 per cent. levied on bars. A remission of duties on railway iron would only affect the tariff on that particular form of iron, and leave the duty still on all the common forms of iron manufactured.

It would affect no American manufacturer of iron whatever, unless he was engaged in the manufacture of railway iron,—and the number of those is very small.

We will show now that the tax on iron has had its legitimate and proper effect, in protecting the American manufacture of iron, on all other kinds of iron manufacture, but has *had no effect whatever, on the manufacture of railway iron.* We compare below the increase in five years, of the importation of railway iron, and of all other kinds of manufactured iron.

	Value of bar iron imported.	Value of all other kinds of Manufactured iron.
Imported in 1848	$5,5,9,600	$8,000,000
Imported in 1853	15,402,700	10,200,000
Increase	300 per ct.	25 per ct.
Aggregate increase in the importation of iren	200 per ct.	

We find then, the increased import of bar (in other words, railway) iron, amounts to *twelve-fold* the rate of increase in all other manufactures of iron; and, that while the increase of other manufactures of iron is much less than that of the aggregate imports of foreign merchandize, the increased importation of rails is vastly greater; in other words, the tax has proved a positive protection to the manufacturcs of other kinds of iron, but *has had no effect whatever, on the American manufacture of railway iron.*

Let us take another form of comparison.—The following is the aggregate import of bar, or rail iron for several successive years:

In 1848	$3 679,000	In 1849	$6,060,000
In 1850	7,400,000	In 1851	7,400,000
In 1852	8,600,000	In 1853	15,400,000
In 1854..about.	17.000,000		
Increase from 1848 to 18 0	100 per cent.		
" " 1850 to 1852	18 " "		
" " 1852 to 1854	100 " "		

If the 30 per cent tax on imported bars had, in the least degree, benefitted the American manufacture, it is obvious that the importation of iron rails would have been kept within the limits of increase of the general, or aggregate importation. But the very reverse is the fact. Not only has it not arrested the importation of iron rails, nor kept it within the limits of general increase, but the importation has increased at a most unprecedented rate! It has increased 300 per cent. in one year. The proof therefore, is positive and undeniable, that the tax on rails has not benefitted the American iron manufacturer in the slightest particle. This fact becomes of greater magnitude and force, when we add to it that there is another tax in the form of freight, and yet another in the shape of commission.—Suppose a ton of English iron, imported at present rates, and we have something like the following result:

Prime cost	$42 00
Discount on Bonds	4 20
Freight	8 00
Commissions	2 80
Duties	16 00
Total	$73 00

In the form of duties, freights, commissions and discounts, the American manufacturer has a protection equal to 70 per cent., and if the whole government tax were taken off, the American manufacturer on the Atlantic would be protected to the amount of 35 per cent., and in the Valley of the Mississippi, to full 50 per cent. If the English manufacturer can sell railway iron at $40 per ton, the American manufacturer, in Ohio, Kentucky, Tennessee or Missouri, can undersell, at $70 per ton; in other words, he has a margin of $30 per ton in his favor. Yet, with this enormous difference, the American manufacturers have not made more than a small portion of the iron rails used in the United States. Why not? The reasons are sufficient, and such as no tariff duty will obviate while they exist.

In the *first* place, the manufacture of railway iron, to supply the United States, requires immense works with immense capital; and such works do not exist in this country. The demand for railway iron is faster and greater than can he supplied here, by the existing works. Why, then, not make the works?—Because capital is not abundant for that purpose, and because other kinds of iron manufactures are so profitable, that *there is no great temptation to go into that business.* Take an example:

Ohio pig iron in 1852, per ton	$23 00
" " 1854, "	45 00
Increase in the price of pig iron	60 per cent.

If the iron master, then, was ahle to live and go along under the prices three years since, he must make very great profits now. Hénce, while this enables the manufacturer of the raw material to do a very profitable business, it obviously diminishes the opportunity of profit in iron rails, because the raw material is so much advanced. The temptation to erect great works, and the capital for it not existing, the works have not been erected, except in very few instances. Hence, it is in England and Wales only, where such an immense amount of rails can be rapidly turned out.

Another, and equally strong reason for the purchase of railway iron in England is, that nearly all of it is *bought on long credit*; thus enabling the railway companies to *obtain capital* for the construction of their roads, by *the purchase of iron.* When this can be done, it is palpably the interest of the companies to do it; and even at a higher price, is sound policy; for their roads are productive and in a few years both their business and their credit will enable them to pay the debt thus contracted. It is in this way that railway companies have been, in one way, obliged, and in another, tempted, to purchase their iron in Europe.—At any rate, it is palpable, that the government tax has had *not the slightest influence in favor of the American manufacturer.* He then, cannot justly object to the remission of this tax; for, while the remission will greatly benefit the railways, it will not injure him.

Who, then, does the tax on railway iron benefit? No person, interest, or community.—The revenue does not need it; the manufacturer does not need it, nor the merchant is not benefitted by it; for the only result is so much gold locked up without interest, without circulation, and without object.

The ground, therefore, upon which a statesmight object to the remission of duties, is taken away entirely, by the total absence of any facts to sustain his argument. Neither the government, the people, nor the manufacturers need this tax. All of them would be just as well without it.

SMITH'S FALLS & KEMPTVILLE RAILROAD, CANADA.—This is a new road proposed between Brockville and Bytown, via Smith s Falls and Kemptville.

Railroads.

WEST POINT RAILROAD.

The Columbns *Times* makes the following analysis of the Report of the President and Directors of the Montgomery and West Point Railroad, at their annual meeting in April last. It will bo scen to be in a very prosperous condition.

Receipts for the year ending 1st of March, 1854:

From Passengers	$133,393 81
" Freight	72,314 80
" Mail pay	24,337 44
Total	$230,044 05

Expenses for the same time:

For working the road and repairs	$122,9?0 77
For interest paid on loans	26,548 70
Total	$140,498 47

Leaving as the net income for the year $80,547 68, or nine per cent. on the capital stock.

The company will have to pay $300,000 due by bonds in three years, which will consume the net income of the road for that time.

A very large increase of freight and travel is anticipated on the completion of connecting roads. These are the Opelika Branch Road, the Alabama and Florida Road, and the Montgomery and Selma Road. The completion of the Opelika road has been delayed by encountering, in several cuts, compact beds of gneiss of the hardest quality, yet, notwithstanding, the Engineer says it would have been completed by the close of the year, but for the obstructions thrown in the way by the city of Columbus. As these have all been removed, we may hope that there will be no delay in the completion of the work The preparation of the road bed is so far advanced as to leave no room for apprehension that the track laying, which has been already commenced, and is progressing at the rate of a mile per week, will be retarded by unfinished grading.

NEW ORLEANS, JACKSON AND GREAT NORTHERN RAILROAD.

One of our Mississippi exchanges, published at Aberdeen, in speaking of the progress of this great enterprise, says that the above road will certainly be completed to the state-line, a distance of 87½ miles, by the Fourth of July, at which time a splendid barbacue will be given in celebrating this important event. From that point to Jackson, a distance of eighty or eighty five miles, the road is under contract, and the grade pretty well completed for the first twenty or twenty-five miles. From Jackson to Canton the road is under contract the entire way, and the grade is nearly completed. On that part not yet graded, a large number of hands are engaged, and the cross-ties which are of superior quality, are being delivered. It is confidently expected that the cars will be at Canton in November. From Canton to Aberdeen, a distance of one hundred and twenty miles, fifty of which are under contract, the work is rapidly advancing. The estimated cost of the grade of this part of the road, is $1,200,000; of this sum, $900,000 is already provided for by subscriptions in those counties through which the route passes. Gen. R. Davis, who has just completed a tour for the purpose of soliciting stock for the road, informs our cotemporary that he is quite sanguine in the belief that the remaining $300,000 will be raised by the 15th July inst. In the event of this amount being raised, it is his opinion that the remaining seventy miles will be put under contract in the course of four or six weeks.

WESTERN & ATLANTIC RAILROAD, GA.

James F. Cooper, Superintendent, has laid before the Governor a report of the Earnings and expenditures of the Western and Atlantic Railroad for the 1st and 2d Quarters of 1854, from January 1st to June 30th, 1854.

MONTHS.	EARNINGS.	EXPENDITURES. Work'g & maintaining Road.	On all other Accounts.
January	47,082 80	19,498 52	18,965 25
February	51,5?0 82	21,268 34	13,097 27
March	71,681 42	22,530 45	32,679 43
April	63,762 11	32,927 01	47,644 54
May	44,622 59	15,124 78	26,865 40
June	39,664 42	18,732 04	20,683 16
Amount'g to	318,402 16	130,081 08	159,935 04
Same period in 1853	238,116 68	156,460 41	219,495 35
Difference	80,285 58	26,379 33	59,500 33

CHICAGO AND AURORA RAILROAD.— The revenues of this road for the last six menths have been as follows:

January	$13,345 42
February	15,387 29
March	16,133 95
April	14,592 96
May	23,683 34
June, (estimated)	28,455 70
Total	$111,587 65

KENNEBEC AND PORTLAND RAILROAD.—The following statement of the receipts on the Kennebec and Portland Railroad, for the months of May and June, shows a large increase of business, as compared with same months last year:

	1853.	1854.
May	$11,766 40	$19,385 36
June	12,176 21	17,700 00
Difference	$23,942 61	$39,085 36

THE GALENA AND CHICAGO UNION RAILROAD has declared a semi-annual dividend of *five* per cent. in cash, out of the net earnings for the 6 months ending July 31st—and a stock dividend of *seven* per cent. out of the surplus earnings up to that date—both payable on and after the 10th of August. The earnings of the road for May, were $119,395 31; in June, $120,879 55.

BRIDGE BURNED.—The bridge of the Terre Haute and Alton Railroad across Wood River near that place, was burned on Tuesday night last. The bridge was a superior one of a single span and cost upwards of $3000.

MOBILE & GIRARD RAILROAD.

On Thursday morning, by invitation of Geo. S. Runey, Engineer, says the Columbus *Times*, we crossed the river to enjoy the first ride upon the Mobile and Girard Railroad. Arrived on the ground, we were pleased to find the "Chunnenugge," an engine of 18 tons, on the track, fired up and ready for the race. We ran out a mile and a quarter returned much pleased with the excursion, and in higher hopes of seeing this great enterprise completed than we have ever been.

The track will be laid to Colbert, a distance of 22½ miles, by the 15th October. The iron weighs 60 lbs. to the yard; the track is so well laid under the supervision of Col. Pillsbury, that the cars run over it with great smoothness. When finished, the Mobile and Girard Railroad will be one of the best roads in the South, and constituting the only connecting link between the Atlantic and the Gulf, must be the best railroad stock in the world.

CINCINNATI, LOGANSPORT & CHICAGO RAILROAD.—The following named gentlemen now constitute the Board of Directors in this Road:

C. B. Smith, J. A. James, D. A. Powel, R. M. Corwine, J. Pullen, Cincinnati; C. K. Hamilton, New York; S. Meredith, Cambridge City; W. Butler, Dublin, M. L. Bundy, J. C. Huddleston, New Castle; W. Wright, Logansport.

On Monday last, C. B. Smith was elected President in the place of J. T. Elliott, resigned. A change in the Board of Directors and the President is in consideration of a subscription of $800,000 to the Cincinnati, Logansport and Chicago Road, by the Cincinnati and Chicago Straight Line Company.—This arrangement will, it is confidently believed, secure the completion of the road from New Castle to Logansport this fall.—*Rich. Pallad.*

ARKANSAS RAILROADS.

MIDLAND RAILROAD.—Ground was broken on this road on the 4th of last month at Helena.

LITTLE ROCK, PINE BLUFF & NAPOLEON RAILROAD.—Ground was broken on this road on the same day at Pine Bluff.

MISSISSIPPI, OUACHITA & RED RIVER RAILROAD.—On the 6th of July ground was broken on this line at Camden.

Thus we see that Arkansas is destined to have railroad communications, despite the "hard times"—Success to her.

RACINE, JANESVILLE & MISSISSIPPI RAILROAD, WIS.—From a letter of H. S. Durand, Esq., President of this company, we learn that the report in circulation relative to the loss sustained by this company in consequence of the failure of R. & G. L. Schuyler, is incorrect, the company having sustained no loss by this firm, or other damage further than a possible delay in the opening of a portion of the line.

SUBMARINE NAVIGATION.

The great invention of the day, the submarine navigation of Dr. Payerne, is about to be put in practice at Cherbourg, the company purchasing the invention having volunteered to cleanse that harbor, free of expense to the government. The secret consists in the discovery of means whereby artificial air may be produced in sufficient quantity to enable a crew of fourteen men to breathe freely beneath the water for the space of four hours. A curious experiment has been already made at Marseilles, where Dr. Payerne, in company with three sailors, went to the bottom in presence of hundreds of spectators, and rose at a considerable distance, and climed the portholes of a man-of-war, without being perceived by the crew. Many experiments are about to be tried of the efficacy of this novel means of attack. A submarine fleet of small boats, each to contain a crew of twenty-one men, is already talked of as being about to be organized for the Black Sea. It seems that no intimation whatever is given by the slightest ruffle on the surface, of the approach of one of these vessels. The apparatus invented by Dr. Payerne enables the wearer, moreover, to move about with ease at the bottom of the sea, and great anticipations are formed of the immense benefit to be derived in submarine history from the adoption of this new method of becoming acquainted with the hitherto unknown mystery of the ocean. However, it is not a bad reflection of the spirit of the age in which we live to remark, that the first application of this tremendous power, which should rank with the electric telegraph as proof of the wondrous perseverence and ingenuity of man, has been made use of for the supply of oysters from Granville for the *halles* of Paris.—*Paris Correspondent of the London Atlas.*

THE ASHLEY RIVER BRIDGE.

The Building Committee of the Charleston Bridge Company have concluded a contract with Wharton and Pestch, and Julius D. Pestch, for the construction of the bridge over Ashley River, on the site of the former bridge and present Ferry. The plans and specifications adopted, are those of Mr. J. D. Pestch. The extreme width of the bridge will be 35½ feet, with two carriage tracks, each 9 feet feet wide; a foot way 6 feet wide on each side, and at every alternate span there will be a recess, 6 by 20 feet, provided with seats, which will add much to the pleasantness of the bridge as a promenade.

The entire length of the bridge will be from causeway to causeway, 3,335 feet. The draw-bridge at the center will be 135 feet long, revolving horizontally on a pivot and circular railway, leaving, when open, a clear passage of 35 feet on each side of the center. The bed of the bridge will be eight feet above the high water mark of spring tides, and the frame work above the bed will be open, strongly braced, but with no useless incumbrance of timber; so that by its hight, strength and lightness, it seems fully secured from dangers of both flood and storm.

The bridge is to be completed in eight months, at a cost of $80,000.

AMERICAN IRON FOR RAILROADS.—MISSOURI IRON.

The *Saint Louis Republican* has the following upon this subject:

The innumerable deposits of iron ore in the United States, furnish as great a diversity, and as good a quality of that material, as can be found in the world. Yet in malleable iron we make nothing like the Swedes; while in pig, we make nothing with either our bituminous or our anthracite coal equal to the Scotch. Our Juniata malleable iron is as strong as the Swedes'; but being softer, will not wear half as long in either a horse shoe or a log chain. The Tennessee iron is as good as the Juniata, and the Iron Mountain equal to either, though differing from both. For foundry purposes, there is no better pig iron than that made in Southern Ohio and Northern Kentucky; the cold-bast iron for machinery, the hot-blast for stoves and hollow ware. I greatly doubt whether any hot-blast pig can be found equal in strength and excellence to that of Southern Ohio. But the supply for the last two years has fallen far short of the demand. This demand has made a market for millions of dollars worth of Scotch and English pig and rails that ought to have been made in this country. So great has been the call, that the capacity of those countries to produce them has proved unequal to the demand. This state of the iron market is the legitimate result of the new railroad and gold developments. The railroads diverted thousands of hands from agricultural and other industrial callings, and these roads created the unusual demand for iron; hence it became scarce and dear. Tens of thousands flocked to the land of gold, and gold became abundant and cheap. But, measured either by gold or labor, iron has found a new proportional value. It is worth more—it represents more labor, and demands as an equivalent of exchange more gold.

The relative change has caused the springing up of innumerable new furnaces in our own county, induced the laudable attempts now making in various parts of the United States to manufacture iron from the ore, with bituminous, cannel, and anthracite coal, and established anew rolling mills to make rails for the various roads progressing in the United States. The Wisconsin ores, equal to any in the world, are yet undeveloped. The Missouri mines are in process of being worked. They present a great variety of ores, and have required a largely diversified series of experiments to make them available. But they are now worked, and will soon be extensively used.

The Pilot Knob makes a very good hot-blast iron for stoves. The Iron Mountain worked with cold-blast is a very different article. It will not make stoves nor hollow ware. Its great proclivity to chill, or to become carbonized, renders it unfit for light machinery, but when rightly mixed with other iron. it is the best iron for car wheels in the world. There is no stronger iron, none that is soft and strong that so readily chills, and hence, none so well adapted to making wheels.

In making a car wheel, two things are indispensable—great strength and a "hard tread," or periphery. It must be strong, for a weak wheel endangers human life. It must have a hard tread, or it immediately wears out. This is easily proved. A brake is placed on each wheel of every car, and when the engineer sounds his alarm, the brakes are frequently put down so hard that the wheel slides on the rail. The point of contact between the wheel and the rail is but a point. The weight of a passenger car is nearly seven tons; with thirty-five passengers it will be about nine tons, or over a ton to each wheel. The sliding of a wheel twenty or thirty rods with such a weight upon it, will soon wear a flat place on the "tread," unless it is very hard, and when once it begins to wear, it soon becomes ruined, inasmuch as this flat place is the stopping point when the brake is applied. In making the double plate wheel with the solid hub, the plates crack in cooling. To obviate this difficulty, the manufacturer anneals his wheels; but if the wheel is made of Iron Mountain pig, it may be thrown out of the moulds as ordinary castings are, without breaking. Hence, as soon as the excellence of this iron for making wheels is known, it will be eagerly sought after, and all that is made will be used for that purpose. I speak here of the charcoal iron. Whether a good iron can be made from any of the Missouri ores with bituminous, cannel, or hard coal. or coke, remains to be tested. In its solution, Missouri has a great and an untold interest, the importance of which few have fully considered.

JAMES L. GAGE.

St. Louis, July 6, 1854.

New Banking Law in Connecticut.

The Legislature of Connecticut has passed a new bank bill, which is intended to restrict the practice heretofore so prevalent on the part of the banks of that state, of loaning their bills to parties for circulation in the Western states. The following are its provisions:

"Section first provides, that after October 1st no bank shall directly or indirectly pay more than 4 per cent., for the loan of money borrowed within the state or on deposit. Second, Banking Associations formed under the act of 1852 are prohibited taking a greater rate of interest or discount than incorporated banks are authorized to do. Third, prohibits any bank or banking association from taking more than six per cent. interest or discount on any note, bill, draft. or bill of exchange. Fourth, loans and discounts not to exceed at any one time, one-fourth of the capital stock paid in, and deposites at the time. Fifth, prohibits a loan of bills or notes for circulation by one bank to another, or to any individual under any contract or agreement that the bank or individual in receipt thereof shall protect and guard the circulation of such bills or notes loaned, or redeem the same—existing contracts not to be effected by the prohibition. Sixth. The penalty for each violation of the provisions of the act is not less than $500—to be recovered on a suit by the state attorneys in the different counties."

IRON MOUNTAIN RAILROAD—*Closing of the Land Offices.*—We learn from the St. Louis Republican that official instructions have been received from the General Office at Washington, by the Register of the Land Office in that city, to withdraw from entry all the lands along the line of the "Iron Mountain and Mississippi Railroad." These instructions have been issued by the President, at the instance of the delegation in Congress from the state of Missouri.

CAR VENTILATOR AND HEATER.

The following is a description of an ingenious device, of which Messrs. Toole & Allen, of Buffalo, are the inventors and proprietors:

On the top of the car at the center are placed sheet iron bonnets, (one on each side,) so arranged as to receive the air when the cars are running in either direction, deflecting it downwards through air chambers (placed within and on each side of the car) into a box and tank suspended beneath the floor; from which it is conducted by air-tubes opening up into the car through grates in several places along the aisle, thence out again though openings at the top. The tank is of sufficient depth to hold a barrel or more of water—allowing free passage of air above it. In connection with this water are pipes leading to a small rotary pump attached to the truck frame (which is driven by a belt passing round the axle of the car wheel,) then back again to the tank and air-chambers, where, by a simple arrangement of diffusers the water, in its passage is scattered into a fine spray falling into the tank to be used over again. When the cars are in motion the air rushes in with great force, passing through the spray of water which washes down all dust, smoke, cinders and other impurities, coming up into the cars as pure as a summer's atmosphere after a shower, and very much cooled. The water is changed daily when the roads are dusty. The amount of air received is easily regulated by a valve in each chamber.

During winter instead of water a stove is placed in the tank below the floor which heats the air in its passage, thereby ventilating and warming all parts of the car alike, and that too without the loss of any seats, which in other cars are removed to make room for a stove.

TELEGRAPH LINE TO CALIFORNIA.—The Senate has passed the bill for the construction of a line of Telegraph to California.

The bill appropriates a portion of the public lands to meet the expense, which it is estimated will be $2,000,000, or on an average, about $1,000 a mile. It also fixes the limit of charges. Not more than $10 is to be charged for sending a message of ten words, nor more than seventy-five cents for each additional word. The Government is to have the right of transmitting dispatches free to the amount of three thousand words a month.

☞ The New Orleans and Opelousas Railroad has been completed to Bayou des Allemands, a distance of thirty-five miles; and the New Orleans, Jackson, (Miss.) and Great Northern road, is now finished to Bayou la Branch, a delightful retreat about 20 miles from the city of New Orleans. The Great Northern road will be completed in August to the Louisiana state line.

ALABAMA RAILROAD.—The Directors of the North-East and South-West Alabama Railroad, have decided on the route from Tuscaloosa to Eutaw. It runs on the east side of the Warrior, crossing the river at Brown's Bluff, about one mile above Finche's Ferry. This was done mainly on the recommendation of the Chief Engineer.

IMPROVEMENT IN STEAM PRODUCTION.

The Collins' steamer Arctic has just undergone repairs of a very important nature at New York. Her engines have been overhauled with a view to effect changes, which, if successful, it is said, will reduce the expense of navigating that vessel to nearly one half the present cost. This improvement is thus set forth in the *Herald:*

The steam, after it passes from the boiler is carried by pipes back through the furnaces, and submitted anew to the action of heat.—This process converts it into what is technically called stam. It has been found that this stam has from thirty to fifty per cent. more expansive power than when in the form of steam after it leaves the boiler. This increased force is, of course, a clear saving of a proportionate amount of fuel, and the effect will be to render unnecessary such large supplies of fuel. It will also effect a great saving of store room. The saving of 40 per cent of fuel is by no means a trifle. One of the Collins' steamers uses eighty tons of coal a day. This would make from 800 to 1000 tons for every trip across the Atlantic. Estimating the value of coal at $5 per ton, this would make the cost of fuel per day of $400, and for a trip—counting its average length ten days—$4000. As each steamer crosses the Atlantic thirteen times a year, when they run regularly, the yearly expense for each steamer, must be over $50,000, and for three steamers, $150,000. If the improved machinery is successful, and they succeed in saving 40 per cent., it will amount to the snug sum of $62,000, all clear gain.

The production of steam by the process described is nothing new. It has, for some time, been known to our most experienced engineers. There was a patent taken out in England for something similar, called "Frost's patent," and there is an engine now at Stillman & Allen's, foot of Twelfth street, that is supplied with motive power by this means.

It is also stated that Mr. Ericsson has abandoned his hot-air projects, and will adopt the change Mr. Collins is about to try on board the Arctic.

LA CROSSE & MILWAUKEE RAILROAD.—The Officers of this company are using every effort in their power to hasten the completion of this road to Horicon. Judge Barber is now East with a view to raise money on the mortgaged security of the Company. While in Milwaukee, week before last, we saw tee first locomotive built for this road, pass up the Milwaukee River through Spring Street Bridge, on a scow, from the Menominee Iron Works, to where the depot is located and the track being laid. The next day we saw it standing on the track, nearly ready to commence its labors. It is a large and beautiful engine, and reflects great credit on the spirit and enterprise of those engaged in its construction. Its name is "Westward Ho!" and we shall anxiously watch the time when we shall welcome it into Beaver Dam.—*Beaver Dam Republic.*

☞ The San Antonio *Ledger* says: "The railroad company has closed doors, and we are credibly informed, have refused to permit an examination of the books by those sent for that purpose by the stockholders."

VIRGINIA AND TENNESSEE RAILROAD.—The Abingdon *Virginian* says, on Tuesday night last, the engine crossed New River on the bridge, and far as Newbern, 28 miles east of Wytheville. Next week the passenger train will commence regular trips to that point.—From Lynchburg to Newbern is 106 miles, and from there to the state line, by the road, is we believe, 99 miles. Thus we have a little more than half the whole line entirely completed, the balance nearly all graded.—The most of the work to do is the 15 miles between Ahingdon and Bristol, and the heaviest sections of this already graded. With such contractors as we have in these parts, and such overseers, mountains melt away and valleys swell to plains, as imperceptibly almost as dissolving scenes succeed each other.

VICKSBURG RAILROAD.—We learn from the *Picayune* that this company have about concluded arrangements for the right of way from Shreveport to the Texas line. They have already laborers on the spot, and will shortly add to their number. Cotemporaneously with the opening of the road at Shreveport, twenty miles of the road at Vicksburgh, west, has been commenced by the contractor. There are now, on this part of the route, immediately opposite Vicksburg, upwards of fifty laborers and more are daily expected.

TROIS PISTOLLES RAILROAD.—We stated in a recent issue that a portion of the Trois Pistolles Railroad was completed, and that, judging from present appearances, some thirty-five miles of the line will be ready for traffic in the fall. The route is favorable on this part of the line, and laborers are employed upon every foot of it, where the labor can be advantageously used; and we repeat, that apart from accidents and contingencies which cannot be controlled, there is a well founded expectation that the road will be ready by the time specified.—*Montreal Pilot.*

NASHVILLE & CHATTANOOGA RAILROAD.—The Mayor of Nashville lately called the Aldermen together for the purpose of voting on the ordinance authorizing the levying of the tax of $200,000 for the Nashville Railroad.—The Board met and unanimously adopted the ordinance. It had already been passed by the Common Council, and is now a law.

ANOTHER GRAND TRUNK RAILROAD TO BE OPENED.—We are informed that the last bar of iron necessary to complete the Chicago & Mississippi Railroad will be completed to-day and that the regular trains will commence running between this city and Alton next Monday! This is indeed, a gratifying consummation of a great enterprise. Hereafter, our state Capital will only be eight hours distance from Chicago, and Alton and St. Louis respectively, twelve and fifteen.—*Chicago Tribune, 26th.*

☞ The Steubenville and Indiana Railroad is now open as far as Bowersville, Harrison Co., a distance of some 50 miles from Steubenville.

IRON PAVEMENTS.

Some months ago, says the *American Mining Journal*, we published an advertisement for some thousands of tons iron castings to be used for a new street pavement, the patent for which is with a company at 110 Broadway, N. Y., and last week we were pleased to observe that workmen were busily engaged in laying down a section of the new pavement in Nassau street, opposite the Post Office, where a complete block of it is now finished, and open to the heavy traffic of that locality. The castings are all of the same form, each consisting of a ring of about 14 inches in diameter and 5 or 6 inches in depth, with five spokes connecting this outer ring with an inner one, say 4 inches in diameter. These castings are made sharp on their under surface, where they are imbedded in the earth, while the upper surface of both rings and spokes are flat, broad, and having projections and depressions on the edges which meet and interlock with the corresponding projections of their fellows, so as to form a continuous and mutually supporting mass; the interstices are filled up with gravel, earth, etc., etc., the whole forming a solid road bed for which several advantages are claimed over the granite pavement, both for beauty, economy and durability. The castings can be furnished at low rates, requiring no cleaning off, etc., etc. We noticed some time since that a part of Court street, Boston, was laid with the same material, and though it will no doubt take some time to decide to which of the two pavements the preference is to be given, as to durability, yet there can be no doubt as to the vast superiority of the iron pavement, on the important points of ease in draught, and perfect freedom from the noise that is so objectionable a feature of the stone pavement. If the other points claimed for it shall be as well established, we look upon the present improvement as one of the most important of the age.

Columbia and Hamburg Railroad, Ga.—James G. Gibbes, Engineer, has completed the preliminary surveys of this road, and has submitted his report to the authorities of Columbia, by whom he was appointed.

Two routes were surveyed, the one which he designates the "low or direct line," runs within two and a half miles of Aiken, (why not unite with the Charleston Road at Aiken, and thus save fourteen miles of road!) and is 68½ miles long—an air line being 63½. The other which he designates "the upper or Ridge line," passes from Hamburg near the Cherokee Pond, Edgefield, C. H., etc., and intersects the "lower route" about eight miles from Columbia, making the distance 74½ miles.

His estimates for the cost of construction of the two lines are as follows:

Direct line—68½ miles, $1,105,625.

Ridge line—74½ miles, $1,040,925.

Being $16,140 50 per mile for the direct, and $13,972 14 for the Ridge line.

The Reading Railroad.—The Reading Railroad Company have decided to postpone their semi-annual dividend. The Company say they have made preparations for a large increase of business this year, by the authority of the stockholders, who also authorized the managers to issue stock or bonds in such manner as was deemed best to pay for the new wharves, locomotives, cars, etc., which the wants of the public required. They deem it better to appropriate the present very large receipts to the rapid extinction of the floating debt, incurred for these necessary improvements, rather than to pay the present high rates of interest and to make dividends.

Jasper and Petersburgh Railroad.—A large and enthusiastic meeting of the citizens of Dubois county, Ia., was held at Jasper on the 7th ult., to consider the propriety of constructing a railroad from Jasper, to form a junction with the Evansville, Indianapolis and Cleveland Straight Line Railroad, at or near Petersburgh. The meeting was addressed by the Rev. Joseph Knudak, Hon. R. R. Edmondston, of Dubois county, and Judge Lockhart, of this city, after which a resolution was unanimously adopted, declaring that the people of Dubois county were willing, able and determined to build said road. Books were then opened, and $25,000 stock subscribed in a few minutes, and a committee appointed to draft articles of association for the organization of a company. The people of Jasper have taken the right stand. We wish them great success in their enterprise.—*Evansville Enquirer.*

Robbery of the Grand Trunk Railroad Office.—On Thursday night the safe of the Grand Trunk Railway Office, Little St. James Street, was opened and money and securities to the amount of £15,000, or £16,000 abstracted therefrom. In the course of the day, in consequence of information given by a woman, several boxes containing the securities were found behind a fence, near Laganchetiere Street. There are still missing some thirds of exchange, to the extent of about £1,500,000, of course valueless, and about £1000 in notes of the Montreal Bank. A party suspected of the offence has been arrested.—*Montreal Herald, July* 15.

Gallipolis, Jackson & Chillicothe Railroad.—At the election last Wednesday, for Directors of the Gallipolis, Jackson and Chillicothe Railroad Company, the old Board was elected without opposition, to-wit: Wm. H. Langley, Charles Henking, Simeon Nash, John Hutsinpiller, Robert Black, Isaac R. Calohan and John N. Kerr.

At a meeting of the Board held subsequently, Wm. H. Langley was re-elected President; Charles Henking, Treasurer, and D. B. Hebard, Secretary.

First Railroad in the United States.—The Quincy Railroad for the transportation of granite from the Quincy quarries to Neponset river was constructed in 1826, and was the first attempt to introduce railroad transportation into this country.

Wabash Valley Railroad Company.—The annual meeting of the Stockholders of the Wabash Valley Railroad Company, was held at York, Ills., on the 3d inst. Notwithstanding the excessive warmth of the weather and the pressure of harvest, there was a large attendance. The following gentlemen were unanimously elected Directors:

Hon. A. T. Ellis, of Vincennes; Gov. A. C. French, John Hnston, Esq., Dr. D. S. Meserve, Crawford county; Judge U. Manley, John B. Richardson, Gilead Shaw, Clark county; Jonathan Young, Hiram Sanford, S. Sutherland, Edgar county.

The Directory held a meeting the same day and unanimously elected—

Hon. A. T. Ellis, President; John B. Richardson, Secretary; Joseph G. Bowman, Treasurer, and Charles Summers, Chief Engineer.

The Delaware Railroad.—The *Dover Reporter* says that over ten thousand dollars' worth of cross ties have already been delivered to the Delaware Railroad Company. It is confidently believed that the road from New Castle, as far down as Dover, will be in running order by the opening of the next spring, and that the entire road to Seaford will be in successful operation by the 1st of October, 1855.

Charleston and Savannah Railroad.—At an adjourned meeting of the subscribers to the Charleston and Savannah Railroad, held Wednesday the 12th ult., the following named gentlemen were elected President and Directors for the ensuing year:

President, Thos. F. Drayton; Directors, Hon. T. L. Hutchinson, Wm. Kirkwood, Edward Frost, Otis Mills, N. Heyward, W. F. Colcock, L. T. Potter, Daniel Hayward, W. B. Hodgson, J. Bradley, C. G. Memminger, J. B. Campbell.

Racine & Beloit Railroad.—The failure of Messrs. R. & G. L. Schuyler, will not affect this road otherwise than to delay its construction a very short time perhaps.

The work upon the west end of the road was not stopped on account of the failure of the Schuylers, but the hands were transferred to the eastern end of the road in order to have everything ready for the iron, where they are still at work. The advanced state of the road will make it easy to secure new contractors, several gentlemen of responsibility and character, having already volunteered to take the work. The directors will be able to re-let the road on terms, which on account of the fall in iron, will be of great pecuniary advantage to stockholders.

☞ The Houston *Star* states that the grading of the Galveston & R. R. Railroad, under Major Burke's contract, is progressing rapidly. Only a mile and a half remains to finish the first twenty-five miles out of Houston.

MONETARY.

At the East the Money Market remains without material alteration from our last quotations. Capital is plenty and readily to he had on call loans at 6 a 7 per cent., and on Nnmber One business paper at 8 a 9 per cent. The panic feeling has subsidcd in a great degree, and monetary affairs present a much improved appearance.

The Stock Market has not varied much during the week. The defaulting companies have as yet taken no decided steps as to their affairs; the market is waiting to learn the course they purpose pursuing. The New Haven and Harlem Companies have not yet completed their investigations. The Parker Vein settlement yet drags its slow length along,—sales have heen made at 2 per cent The Committee to investigate the recent over-issue of ten thousand three hundred and twenty-one shares of the Vermont Central Railroad, hy Mr. Crane, made a lengthy report and exonerate all parties from the fraud except Crane, whom they denounce in unmeasured terms. The report closes hy recommending the passage of a resolution that the corporation assume the over-issues, urging the enactment of stringent laws punishing such acts, and demanding an immediate and thorough investigation of the affairs of th Company.

Mr. Tucker, President of the Reading Railroad failed during the week. When this was announced it was apprehended that there would he some new "development," hut it has turned out that Mr. Tucker, though unfortunate, was strictly honest. He has therefore the sympathies of the community, and we see that the Philadelphia papers are loud in their protestations against his resigning the Presidency of the Reading Road. This must he more gratifying to the gentleman, than if he had hy rascally transactions and studied deception, filled his pockets, and placed himself, so far as money could do it, in independent circumstances.

We may, in view of these facts, quote the Stock Market as very unsettled.

The sales have heen as follows:

30 Shares Third Av. RR. Co. 36 00

At the West we have no change to note in the Money Market, except it he a slightly increased ease. Stock aales are dull. In fact, no business is heing done; the excessive heat has driven all who could leave in search of more comfortable quarters.

Eastern Exchange continues at our last quotations.

To Railroad Contractors, Quarry Men, &c.

THE attention of those interested is called to ASH'S IMPROVED HORSE POWER ROCK DRILL, for Railroad Excavation, Stone Quarrying, Well Boring &c.

This Drill is worked by HORSE POWER, requiring but one horse and one man, to keep it constantly at work, with great ease and velocity, performing 60 strokes per minute. It is cheap of construction and repair. The AUGER weights from 300 to 500 pounds, will drill a perpendicular or inclined hole FOUR INCHES IN DIAMETER, at the rate of from 8 to 16 feet per day in ordinary lime stone. It has drilled 2 feet in one hour.

For rights to use for Counties or States, apply to the Patentee. WILLIAM F. ASH,

May 20, 3* Springfield, Ohio.

Baltimore & Ohio R ilroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transport, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York,

And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

J. B. FORD is the Company's Receiving Agent at Wheeling.

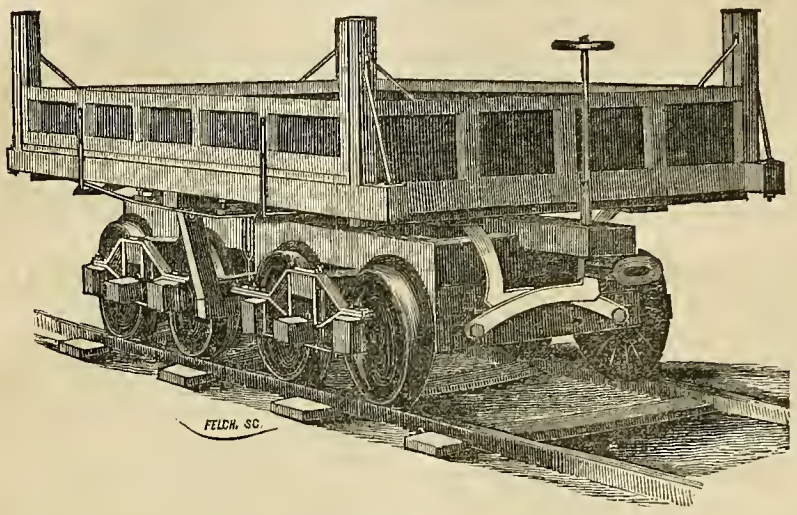
BAILEY'S PATENT DUMPING CAR.

Fig. 1.



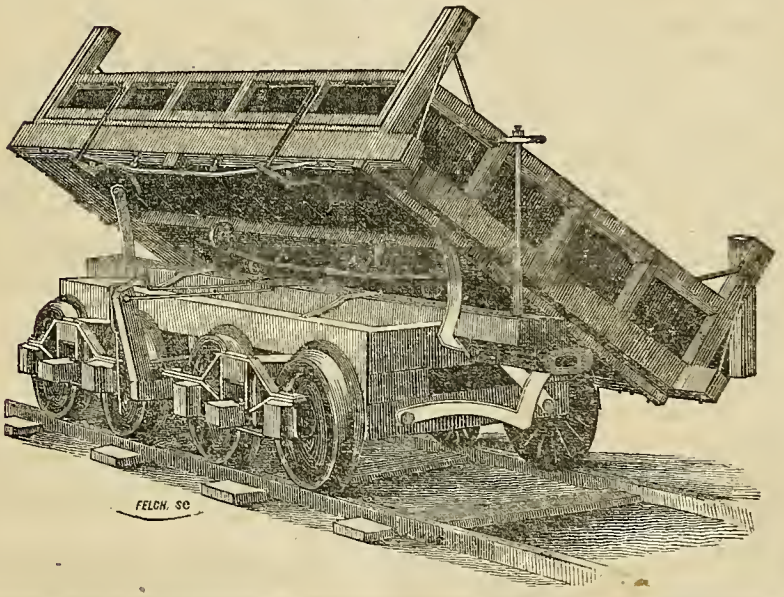


Fig 2.

The above engravings are views of a most important improvement in Railroad Dumping Cars. A patent was granted to C. P. Bailey for the improvement, January 24th, 1854.

Fig. 1 is a view of the car ready to receive the load.

Fig. 2 when dumped, or the load discharged.

This improvement has been in use on the Central Ohio Railroad for several months; also, on the Cincinnati, Hamilton & Dayton; Cleveland, Zanesville & Cincinnati; Cleveland & Columbus; and other Railroads in this state. Also upon the Illinois Central, in Illinois.

The improvement consists mainly, in the adoption of the Wrought Iron Transverse Bars, instead of the Cast Iron Rockers, generally in use. There are, however, other details of importance.

The box or body of the car rests on the ends of the Transverse Bars, whose other and lower ends are attached to the frame of the truck; two of the (wrought iron) bars are used at each end of the cars, to support and operate as guides in dumping the car. This improvement can be applied equally as well to the four-wheeled as to the eight-wheeled car.

One man will dump this car with ease when loaded, in less time than ten men can dump the rocker car, (the long or eight wheeled car is alluded to.) Contractors who have been using it, state that in graveling roads, **it is a saving of two cents per yard,** over the rocker car—that it is a much safer and easier car to manage, preferring it to any other car now in use for similar purposes.

Its liability to get out of repair is not one-tenth that of the Rocker Car. It is also well calculated for carrying and unloading Coal, Lime, Plaster, and all such materials as are carried in Dumping Cars—giving greater inclination in dumping, and discharging the load with greater facility than any other car.

The attention of Railroad Companies wanting Gravel Cars, as well as Coal Cars, is respectfully solicited to this improvement. The cost of this car does not exceed that of the Rocker Car,

To Railroad Companies and Car Builders who wish to purchase Rights, or wish information on the subject, letters addressed to me at Columbus, Ohio, will receive immediate attention.

GEO. L. CHASE.
Sole Agent for the United States.

Columbus, Ohio, June, 1854.

TESTIMONIALS.

Engineer's Office, C.O. R. R.
Zanesville, Ohio, Nov. 21st, 1853.

Charles P. Bailey, Esq.,

Dear Sir:—At your request, some two months since, I caused to be placed on this road two of your newly invented Gravel or Dumping Cars. From what I have seen of their work I am clearly of the opinion that they will soon supercede all others of the kind now in use.

We have had the long car filled to its utmost capacity with the various kinds of excavation, and placed it in every position, and one man would dump it with ease in ten seconds, whereas, with the ordinary Rocker Car, it takes ten men one minute to perform the same labor.

The Car is simple in construction—not liable to get out of repair, as there is but little cast-iron about it. It tips to a greater angle than the ordinary car, therefore leaving its load in a better shape. I have no hesitation in saying that when more cars of the kind are wanted on this road they will be built after your model.

Wishing you every success in your undertaking, I remain, with great respect,

Yours, &c.,
GEO. T. CLARKE,
Chief Engineer.

I have purchased for the use of this company, two Gravel Cars, built after the plan of Mr. Bailey, and fully agree to the opinion above expressed.

HENRY O. AMES,
Sup't Cin., Ham. & Dayton Railroad.

I fully agree in the statement made by the gentlemen in this letter, and may also state that they are the best Gravel Cars ever built, to my opinion.

DANIEL McLAREN.
Mast. Machinist Cin., Ham. & Dayton Railroad.

Zanesville, Dec. 21, 1853.

Charles P. Bailey, Esq.,

Dear Sir:—From an experience in using your Improved Dumping Car, we have no hesitation in saying that two cents per yard is saved, (in labor and time) by using your car instead of the present Rocker Car.

That the repairs incidental to your car are not one-tenth of what they are on the Rocker Car.

That it is much the most profitable car for contractors as well as the safest one for laborers to use, being easier to handle.

We consider it superior, in every reapect, to all other cars of the kind now in use.

Yours, truly,
E. NEWCOMB
C. BARRET.
Cont'rs for grav. East. Div. C. O. Railroad.

I have seen the car above referred to at work, upon the Eastern Division Central Ohio Railroad, and fully concur with the opinion of Messrs. Newcomb & Barret

E. B. DUVAL,
Mast. Machinist, Central Ohio Railroad.
Zanesville, December 21, 1853.

Zanesville, Dec. 22, 1853.

Mr. C. P. Bailey,

Dear Sir:—As you desire my opinion of your Improved Dump or Gravel Car, that has been in use for the last three months on the Central Ohio Railroad, I do not hesitate to recommend it as being the best plan for a Gravel or Dump Car I have ever seen. The bills for repairing Dump Cars, such as are now in general use, it is well known, constitute a serious item of expense. On this account alone, your plan deserves a preference over all others, as there is but little liability about your car to any such accidents as are constantly occurring to the others. It dumps to a greater angle, and one or two men can dump it in less time, and with greater ease than the ordinary Rocker is dumped by ten or twelve men.

It will give me pleasure to recommend it as superior to any improvement of the kind in use.

ROBERT MACLEOD.
Chief Engineer, P. M. & C. R. R.

At a meeting of the Ohio Association of Railroad Superintendents, held at Cincinnati, March 8, 1854, the Committee appointed to examine Bailey's Patent Dumping Car,

REPORT,

That they have examined the Car, and consider the improvement a valuable one; and would recommend to any members of the Association who may need Gravel Cars, to examine and test this Car, before purchasing elsewhere.

W. H. CLEMENT,
For the Committee.

Clev Col. & Cin. and Clev. & Erie R. R.
Supt.'s Office, Cleveland, O., Apr. 24, 1854.

Mr. Charles P. Bailey,

Dear Sir:—Two of your Patent Dumping Gravel Cars have been used on the Cleveland, Columbus & Cincinnati Railroad for several weeks, and I am so well satisfied that they are better than any others, that I have just ordered thirty more of the same sort,

Respectfully,
L TILTON
Super't.

ENGINEERING!!

TYLER DAVIDSON & CO.,
Agents for the
BOSTON BELTING COMPANY!

India Rubber Machine Belting in any quantity, from 2 to 20 inches.

India Rubber Steam Packing;

Mixed	do	do	1-32 to ¼ inch thick.
Plain	do	do	1-32 to 1 inch thick.
Pure	do	do	

Pipe and Manhole Rings, all sizes;
Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agents of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.
2d, They are a great deal cheaper.
3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations. This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils,—10 casks, assorted weights now in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co.'s C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft

Cross Cut Saws.—Hoe & Co.'s C. S., John ockerell's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet Also, 4 and 4½ feet Tennon Saws.

Axes—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nnils, now in store.

For sale by TYLER DAVIDSON & CO.,

Being practical workmen ourselves, we feel confident that we can furnish the West and South with as good an article and cheaper than can be bought East.

Cincinnati, June 99, 1834.

WINSLOW'S
PATENT COMPOUND RAIL.

THIS RAIL, which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has becoms established among Railroad Managers as realizing tbe advantages of a

THEORETICALLY PERFECT RAIL.

Its advantages over tbe common form of "T" Rail are—a saving in the wear and tear of Machinery—it saves, to a great extent, in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable Being practically a continuous Rail for the entire length of the road, without break at the ends of bars, the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effects upon Cars and Machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at Hanging Rock Iron Works, upon the Ohio River, and at Mt. Savage Iron Works, Maryland. Specimens of the Rail and patterns of the same will be gladly shown, as well as information in relation thereto, given by application to

MUSKINGUM WORKS, ZANESVILLE, OHIO.

DOUGLASS, SMITH & CO.

WOULD respectfully call the attention of Railroad Companies to their establishment at Zanesville They are prepared to execute orders, on short notice, for

Passenger Cars of the most superior description,

Second Class Passenger, Mail Express, and Baggage Cars; Freight, Cattle, four or eight wheeled Gravel Cars.

We manufacture a superior

CAR WHEEL,

Over 2500 of which are now running on the Central Ohio Railroad, and many of these have been in use on the road over two years, having in that time only three to crack, and two to be renewed in consequence of the wearing of the Chill. We have also commenced the manufacture of the celebrated

WASHBURN WHEEL,

And are prepared to furnish this wheel, with or without axles. Also, castings for Cars fitted to order at the shortest notice.

BOLLMAN'S PATENT IRON & WOOD BRIDGE.

We are also agents and builders of the above celebrated Bridge. Are now placing upon the piers an iron bridge on this plan over the Muskingum river at Zanesville. We are ready to contract with companies for the construction of this Bridge. All orders addressed

DOUGLASS, SMITH & CO.,
au4tf. Muskingum Works, Zanesville, O.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

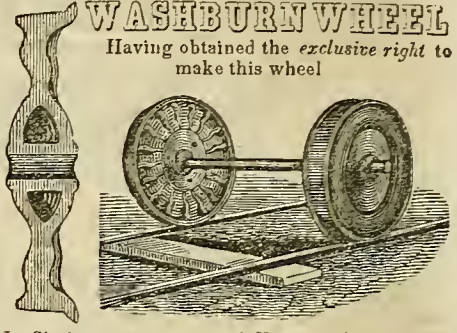
The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Reservoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,
PRINCIPAL AGENT,
May 18.6* Office, No. 167 Broadway, New York.

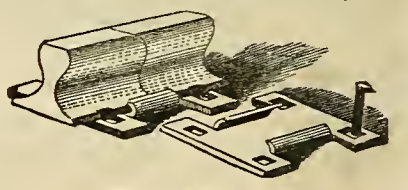


FULTON CAR WORKS,

CINCINNATI, OHIO.

THE Proprietors of this establishment would respectfully call the attention of Railroad Companies in th West and South to their establishment at Cincinnati.—Their facilities for manufacturing are extensive, and the means of transportation to the different points speedy and economical, They are prepared to execute to order on short notice, eight-wheeled Passenger Cars of the most superior description. Four or eight-wheeled Baggage, Cattle, Freight and Gravel Cars. Also, Crank and Lever Hand Cars, Trucks, Wheels, and Axles fitted.

WASHBURN WHEEL



Having obtained the *exclusive right* to make this wheel

In Cincinnati, Covington and Newport, they are now prepared to furnish Railroad Companies with that Celebrated wheel, with or without Axles. Also. Journal Oil Boxes of any pattern, and Castings for cars fitted to order at the shortest notice.

Address KECK & HUBBARD,
Fulton Car Works Cincinnati, Ohio.
ap.12 Office 62 East Second Street.

RAILROAD SPIKES,

WROUGHT IRON

Chairs and Fastenings.

THE subscriber continues to manufactnre with increased facilities, Hook and Flat-Head Railroad Spikes, and wrought Iron Chairs of any pattern, either punched or plain. The best quality of Iron is used, and the articles are guaranteed to give satisfaction in every respect. We are prepared to fill orders for any quantity with dispatch, and at the lowest market prices.

All communications addressed to us will meet with prompt attention.

SMITH & TYSON,
No. 25 South Charles Street, Baltimore.

J. DAVENPORT.... M. D. WELLMAN.... C. M. RUSSELL

DAVENPORT, RUSSEL & CO.,

Railway Car Manufacturers, MASSILON, OHIO.

THE subscriber, late of the firm of Davenport. Bridges & Co., Fitchburgh, Mass., having associated himself with Messrs. Wellman and Russell, under the above name, would respectfully solicit calls for any kind of Passenger, Baggage, Post Office, Freight, Coal, Gravel or Hand Cars.

Having had fifteen years experience in the business and having secured the best of workmen from the Car Factory in Cambridge, Mass., I feel confident that perfect satisfaction can be given in all work entrusted to our care.

We have now on haud the best of dry White-Oak with which we think we can build Cars as cheap and as well as any other establishment in the States.

Feb. 16†* JOSEPH DAVENPORT.

ENGINEERS' & SURVEYORS' INSTRUMENTS!

JAMES FOSTER, Jr.,

MATHEMATICAL AND PHILOSOPHICAL

INSTRUMENT MAKER!

HAVING removed from his old stand to south-west corner of Fifth and Race street, and increased his facilities for making instruments, is now ready to supply Levels, Transits, Theodolites, the Dumpy or Gravatt Level, Circular Protractors of Troughton & Simms model, Surveyors Compasses, Pocket Compasses with and without sights, in great variety. All kinds of Land Chains; Ivory and Box wood Scales of all kinds and graduation; Drawing instruments of all kinds, brass and German silver. Measuring tapes of all kinds, Magnets, Maguifyers, Barometers, Spy Glasses, &c., &c. Repairing promptly attended to. ap.6-6*.

OUR RAILROAD MAP---NEW EDITION.

We have now ready a new and revised edition of our Railroad Map, containing corrections and additions from reliable sources, making it as reliable as it is possible to make such a map.

We are prepared to print maps for Railroad Companies to illustrate their reports, either from the stone as it now is, or make any alterations to suit parties. Railroad Companies will find this much more economical than getting up maps especially for their roads.

Price of maps as follows:

Plain, sized,	40 cents.
Colored in outline,	50 "
Colored in States,	75 "

A liberal discount where a number are taken.

Kentucky Hemp Crop.—A gentleman of this city, who has just returned from Kentucky, informs us that he made dilligent inquiry while in that State respecting the growing hemp crop, and from the most reliable sources of information it is pronounced the best, not only in quantity but in quality, since 1842. All parties agree it is very fine, and being now nearly ready for the knife, nothing can prevent its turning out finely. The crop by many is estimated at thirty-three per cent. better in quality, than that of last year. The crop for 1842 was reckoned at 23,000 tons. The present, it is generally believed, will not fall short of 20,000 tons. In many parts the stalk is ready for the knife, and farmers who have old stocks on hand are anxious to sell. There can be no mistake about the yield being larger and better than that of any season in ten years, or since 1842.—*St. Louis Republican.*

Green Bay and Minnesota Railroad.—The city of Green Bay is about to loan its bonds for $100,000, to the Green Bay and Minnesota Railroad; subscription books to the stock of which road will be opened during this month.

Editorial Correspondence.

VOYAGE ON THE MUSKINGUM—ASPECTS OF THE COUNTRY—MARIETTA—STEAMBOATS—MILLS—MARIETTA & CINCINNATI RAILROAD—CENTRAL OHIO RAILROAD—ZANESVILLE—McCONNELSVILLE.

Hillside, Highland Co.,
July 31st, 1854.

My Dear Record:—I have just returned from an inland journey in Ohio, and as I make you a *confidante* of all my proceedings and opinions, I shall now relate to you what I saw and thought.

In imagination, suppose me at Zanesville, on Wednesday morning, (the 26th,) when rain and lightning have purified the air, and given to it a refreshing coolness, and to the face of nature, its softest green. Just then we embarked on the steamer *John Buck*, in which I was most agreeably disappointed.—For, I supposed, I should be shut up in a little, hot, inconvenient stern-wheeler, during a voyage to be *endured*, not admired. Just the contrary was the fact. A stern wheel the boat had, but, the *John Buck* was new, clean, well-managed, in one word, all that was comfortable, or desireable. Capt. Dexter was *au fait* to everything, and that is enough. The Muskingum river was a novelty to me; and again, was I agreeably disappointed. I tho't it would be tolerable, but not specially charming. But it was charming, delightful, and even lovely to the eye of a lover of scenery and beauty. The Muskingum, like the Licking, has a very narrow bottom; but the hills rise high up and the sides are frequently cultivated; while forest and field present the alternate hues of deep verdure and yellow grain. Although the corn fields are not very extensive, yet, I saw there, altogether the most promising corn I have seen in the state. The counties of Muskingum and Morgan, through which the Muskingum runs, three-fourths of the way from Zanesville to Marietta, are among the most productive in the state, and as I like to *prove* everything as I go, I will give you an illustration from infallible *statistics*. The following amounts of produce were *cleared* from Zanesville and McConnelsville, in 1853:

	From Zanesville.	From McConnelsville.	Total.
Flour, obls	132,408	48,217	180,625
Salt, "	14,371	6,798	21,169
Butter, lbs	143,967	56,604	200,571
Bacon, "	84,602	76,090	159,692
Potters' Ware, "	1,310,884	88,075	1,398,959
Tobacco "	1,103,583	541,202	1,644,785

You will see that in addition to the usual products of a grain country, salt, potters'-ware and tobacco, are exported in large amounts. Indeed, potters'-ware seems to be made in quantities large enough to supply the whole West, and I presume the great mass of this article does come from the Muskingum, and from Liverpool, (Columbiana county.)—The resources of Ohio are not yet fully understood. They are beyond those of any other state. Time, which has done so much for Ohio in half a century, will do far more in half a century to come. It is a great thing to be a fine agricultural country only; but here in the Muskingum Valley, is not only a fine agricultural country; but a country in which you have coal, salt, free-stone, potters'-clay, and other mineral productions at your door. Are you too lazy to cut and haul wood? just run a lead twenty feet long into the hill behind your house, and you have coal for the next century. In the above account *wheat* does not figure, for the good reason that the Muskingum grinds up its wheat into flour.—There are some of the very best mills in the state run by the water power of the Locks.—You must know the state has made what is called the Muskingum Improvement; which consists in throwing a dam across the river, at each ten miles, with a steamboat lock, by which it is made into a great Canal. A most useful one it is, too. Now, when the Ohio has dwindled to a span, the Muskingum is navigable for fine boats. It has done immense good, for which the state receives on the investment about the tenth part of a mill per annum!—But what of that? The state has received back a hundred-fold in the increased value of lands and products.

The scenery of the Muskingum is very beautiful; high hills variegated with green fruit and golden fields; the gentle river winding through all the curves of grace; rural towns, with the air of prosperous civilization, and at every step the evidence of natural and positive wealth, which California cannot surpass. I will tell you something of what may happen, by going abroad or staying at home. I have met for example, with two, and indeed, several intelligent gentlemen, who went to California seeking their fortunes, and they returned not one cent the better. On the other hand, I have seen two citizens of Ohio—one a simple farmer, whose farm is a little Eden, and whose harvests each year add a large surplus to his stock. The other, a man of capital who bought a mill on the Muskingum.—The first year it paid for itself. The second year, 1853, it paid 300 per cent. on the cost. In two years it replaced the capital, and added three times as much! Now, these are examples of what the *soil* will do, without gold, in Ohio. The truth is, that for common industry and intelligence, there is a boundless field of successful enterprise, with the prospect of certain wealth, open to the citizens of Ohio. But I must hasten on.

It was a bright evening, when we reached Marietta, the "Plymouth" of Ohio. My mind was carried back with many associations.—There is the covered way, the mound, the parapets, where some Napoleons and Wellingtons of the great Mongol Race of America once

sought the field of glory; but have now disappeared in the dark clouds of oblivion. There are the hills of Wood county, Va., where the Vandal Militia of that Commonwealth issued to burn and destroy the garden, house and library of that victimized Blannerhasset. There, too, arise the sable shadows of Burr, by the might of eloquence, forever associated with griefs and misfortunes of his unhappy victim. There, also, is the brighter and better memory of the Putnam's, Meigs', Varnum's, Greens', Stone's, Whipple's, and other names connected with history—pioneers in the second great settlement of America. But my pen runs too fast. For the history and antiquities of Marietta, I refer you to Dr. Hildreth's very interesting volume of PIONEER HISTORY, published by the Ohio Historical Society.

I arrived on the eve of commencement day, at Marietta College. The graduating class was small; but they gave the best of testimony to the efficiency of the College, by the excellence of their performance. Indeed, with some knowledge of what colleges are and ought to be, I consider Marietta College the best in the state. The students are not numerous, but the instructions and discipline are efficient. Its President, the Rev. Henry Smith, is a very able man. His Baccalaureate on commencement day, was the best production of that kind I ever heard, and that is no small testimony when it is considered that I have heard Green and Alexander, Miller, Bishop and McGuffey, McIlvaine and Lindsley.

The sun was again declining, bright behind the green hills, when sitting on the hurricane deck of the steamer, I found myself returning, with the blue arched sky above, and all that is soft, refreshing and soothing, in the scenery of nature around.

Next morning I was again rumbling over the Ohio Central Railroad, in most excellent, new cars, made at Zanesville—fine specimens of workmanship. I began to think I would praise this road, notwithstanding on Tuesday previous, it had taken just four hours to take us 60 miles. But when we reached Columbus, we were just *one hour behind time!* Now, what can I say after *that?* The delay was of no consequence to *me*, but it might be of great consequence to somebody. The road is pretty well made and will be a good one; but it has something to learn.

The *Marietta and Cincinnati Railroad* is going on well, and when you consider what I have said about the Muskingum Valley, and what the Hocking Valley is, and what the Scioto Valley is, you cannot over-rate the importance of that line, when complete, to Cincinnati. I doubt whether any other railroad line will be of greater value to Cincinnati.—My dear RECORD, for the present, *vale.*

E. D. M.

DENNEY'S DIVIDED CAR AXLE.—We shall notice this new invention next week. See advertisement.

Railroads.

MISSISSIPPI CENTRAL RAILROAD.

We are indebted to W, Goodman, Esq., President of this Company, for a copy of the "Second Annual Report of the Board of Directors," from which we gather the following items.

The road has been put under contract to Messrs. Healy, Holman, Sims & Sargeant, for construction and equipment, from the town of Canton, northwardly to the Tennessee state line, 183 miles, with necessary side tracks, to be completed and equipped as a first class road, by January, 1857, for the sum of $3,262,500, including also, all necessary expenses incident to the work, except the salary of the Engineer in chief. Ground was first broken in November last, and active operations commenced by the contractors in December, about twelve miles north of Holly Springs. The progress made since that time is very gratifying, and there is but little doubt that the 25 miles between Holly Springs and the junction of the Memphis and Charleston road, will be completed and in running order by January, 1856.

The original contractors have sub-let the larger portions of the work, which parts are being satisfactorily worked.

The charter of this company was so amended at the recent session of the Mississippi Legislature as to allow of a connection with the New Orleans, Jackson and Great Northern Railroad at the city of Jackson, should the stockholders and Directors so elect; also, to permit the consolidation of the company with that of the Mississippi and Tennessee Central at any time the two companies may see fit to avail themselves of the privilege.—The Board earnestly urge the acceptance of the amendment.

The survey and estimates of a route north of Jackson are being made, that a point of connection with the New Orleans, Jackson, and Great Northern road may be decided upon.

By a recent law of the state, the proceeds of 500,000 acres of the Internal Improvement lands, given by the General Government to that purpose, shall be invested in the stock of this company. $360,000 have already accrued from this source, in the state Treasury, about $100,000 of which are now subject to the order of the President of this company. The amount of stock realizable from this source is estimated at from $300,000 to $350,000.—Individual subscriptions now reach $1,741,250, including the amount taken by contractors.

The county of Holmes has subscribed, since last report, $100,000. Carroll county, it is expected, will do as much. The available means of the company are as follows.

Individual subscripitons	$1,741,250
County of Marshall	100,000
" Lafayette	100,000
" Yalabusha	100,000
" Holmes	100,000
Int. Improvement Fund, estimated	300,000
Total	$2,491,250

Leaving $771,250 to be yet provided.

In addition to the local traffic of this line, its connections are important, making, in fact, a portion of a grand trunk line of Northern and Southern intercommunication. It is also, a fact of no slight importance that this road has been so managed that notwithstanding the railroad panic, it will be completed, having so much ample means for that purpose.

RAILROADS.

The following summary of the comparative length of railways, completed and in progress, is from the Manual of roads, shortly to be published by Professor William M. Gillespie of Union College:

Ohio		4191
Illinois		3379
New York		2926
Pennsylvenia	about	2460
Indiana	"	1990
Virginia	"	1760
Massachusetts	"	1350
Georgia	"	1330
Tennessee	"	1080
Missouri	"	1010
South Carolina	"	980
Alabama	"	870
Kentucky	"	790
Connecticut.*	"	750
Maryland	"	640
Michigan	"	620
North Carolina	"	600
Mississippi	"	600
New Hampsbire	"	570
Maine	"	500
Iowa	"	500
Vermont	"	470
New Jersey	"	430
Louisiana	"	400
Wisconsin	"	400
Delaware	"	90
Florida	"	80
Rhode Island	"	70
Texas	"	70

*The whole number of miles located, finished and constructing in this state, is only 664. See Commissioners' Report, 1854.

WASHINGTON & ALEXANDRIA RAILROAD.—The Senate and the House of Representatives, having disagreed in reference to the bill authorising the construction of a railroad between Washington and Alexandria. A joint committee of conference was appointed by the two Houses, and the result has been a compromise, that if the Washington and Alexandria company shall not finish their proposed road in two years from the first of next June, and the track placed in running order, their privileges shall cease; and then only the Baltimore and Ohio Railroad Company shall be privileged to extend their road to Alexandria by either of the routes. And if they do not construct their branch within four years from that time, the act shall be void.

WILLIAMSPORT & ELMIRA RAILROAD.—The Williamsport and Elmira Railroad it is announced will be opened for travel on Monday next. It is seventy-five miles in length, and has been built in the most substantial manner.

ASHTABULA & NEW LISBON RAILROAD.

We take the following from the *Ashtabula Telegraph*:

"A meeting of the Directors of the Ashtabula and New Lisbon Railroad, was held at Orwell during the past week; at which time R. W. Griswold was elected President; O. H. Fitch, Treasurer; and Henry Fassett, Secretary of the company.

"The Board of Directors now consist of R. W. Griswold. Henry Hubbard, Frederick Carlisle, Ashtabula; A. E. Austin, of Austinburg; Wm. H. Howe, of Bloomfield; John Wetmore, of Canfield; A. L. Brewer, of New Lisbon.

"Under the efficient directions of these gentlemen, we may look with confidence for the immediate prosecution of the work, aided, as they will be, by the co-operation of the citizens on the line of the road, who are too well aware of the benefits resulting from its early completion, to suffer the enterprise to languish.

"The company require now, a subscription to the stock of $180,000, from Ohiotown to New Lisbon, a distance of about thirty miles. $110,000, we understand, are already subscribed, leaving the small amount of $70,000 to be raised previous to the letting of the work at this end of the road."

BLUE RIDGE RAILROAD.

This company held their annual meeting at Charleston, South Carolina, on the 11th ult., when the following named gentlemen were elected Directors for the ensuing year:

Henry Gourdin, Hon. T. L. Hutchinson, Henry W. Conner, Charles T. Lowndes, Geo. A. Trenholm, W. C. Dukes, Robert Adger, T. L. Wragg, C. M. Furman.

The Directors made a report of the affairs of the Company. The line was projected last year, and the road was commenced on the 1st November, and is to be entirely finished and equipped, from Anderson to the Tennessee state line, in three and a half years. The resources of the Company are stated, so far as relates to South Carolina, Georgia and North Carolina, to be—

City subscription	$1,049,000
Individual and other subscriptionc	151,000
State guarantee	1,250,000
Contractors in stock and Bonds	3,000,000

Making $5,400,000, and leaving a deficiency of $600,000, presuming that the roads in the three states will cost, as estimated, $6,000,000. The Directors have entered into a contract with Anson, Bangs & Co., for the completion of that work in three years and a half from the first of January last.

The Eastern Railroad property, which was put up at auction at Boston, on Saturday, says the *Courier*, was, after three bids—$100,000, $101,000 and $120,000 withdrawn at the request of the directors of the Eastern Railroad, and the sale postponed indefinitely.

☞ A rich vein of lead has been discovered in making excavations on the line of the Ogdensburgh, Clayton and Rome Railroad, in the vicinity of Redwood. The vein crosses the track of the road, and where discovered, has been worked out eight feet wide, and still bids fair to be much wider.

COAL ROADS—BLOSSBURGH RAILROAD.

A correspondent of the *Buffalo Democracy* says: "This is a coal road—like your Pittsburgh Road is to be, and it may interest your citizens to hear how this road answers its purpose. I'll tell you. It is some forty miles long, and has a six feet gauge. Two trains run up to the mines daily in the morning; one taking a few travelers who pass along this sparsely settled route, and these two trains return to Corning in the evening, bring down 60 or 70 cars each, with 6 to 7 tons of coal. It carries from 400 to 450 tons of coal per day, for which a freight of one dollar per ton is charged. The speed of the trains on this road is limited to 12 *miles per hour*. That is the maximum speed which gives the minimum wear and tear, and you can judge of the profit of a coal transporting road when you know that 28 *per cent. of the gross earnings operates the road*, while on the fast roads 45 to 55 per cent. of the gross earnings are required for expenses. Now if this *short* road, with a business of 500 tons per day, (at the greatest) with no other roads, and with no through and but little way travel, can have 72 per cent. of its earnings with which to make repairs and pay dividends, what ought the Pittsburgh road, double the length, ten times the coal freight, with a large local travel and several connections with other roads, to be able to do? Coal roads pay better than roads depending upon promiscuous freight, for many reasons; but particularly from the systematic and cheap methods of loading, unloading and running."

Sawing Railroad Sleepers.—An ingenious machine has been constructed by Mr. Luther Whitman, of Winthrop, for "siding" or sawing a slab from each side of a railroad sleeper, by horse power. This machine was made for W. E. Rose, Esq., of St. John, N. B., agent for the contractors on the European and North American Railroad, and the horse-power is what is called a sweep power, to which may be attached one or more horses as you please. The saw is a circular one, to which is attached a sliding carriage on which the sleeper is placed; this is made fast by a "dog" at each end, so constructed, that when one side is sawed the sleeper can be turned over without unclinching the "dogs," and the other side put through the same operatian.—Both sides are thus prepared in a first-rate shape, in two or three minutes. The whole apparatus is portable, and may be taken into the forest or to any place most convenient, and is really a great labor saving machine, at a cost of between two and three hundred dollars.

St. Andrews & Quebec Railroad.—The work, we are happy to say, is proceeded with energetically. From a notice in this paper it will be seen the contractors have advertised for mechanics and laborers, to whom liberal wages will be given. The engine now passes over eighteen miles of the road, within two miles of the rolling dam; it is probable we will be able to lay before our readers shortly, the tariff of rates between St. Andrews and the respective stopping places.—*Standard*.

COMPLETED RAILROADS IN NEW YORK.

From an article by W. J. McAlpine, Esq., in *Hunt's Merchants' Magazine* for August, we take the following list of running roads in New York, with their lengths:

Names of Roads	Miles.
Albany & West Stockbridge	38
" Northern	32
Buffalo, Corning & New York	134
" & New York City	91
" & Niagara Falls	22
" & State Line	69
" & Lockport	26

Sackett's Harbor & Ellisburg	18
Troy & Greenbush	6
" Boston	35
" Rutland	17
" Bennington	5
Troy Union	2
Union	1
Watertown & Rome	96
Total length of completed railroads	2,591

IMPROVEMENT IN LOCOMOTIVES.

A new and important invention has recently been tested in one of the locomotive engines upon the Boston and Worcester Railroad, by which one of the express trains, of four long cars, was run to Boston and Worcester and back, with one cord of wood. The running time was one hour and fifteen minutes each way, the whole number of miles run being ninety. The improvement was invented by Mr. Joseph Marks, a practical engineer mechanic. It consists of a cylindrical steam chest and valve, arranged with circular steam ports, or passages, so as to keep a constant and equalized pressure upon the valve, in its circular and horizontal surface. The combination gives more expansive force, and the back pressure is almost entirely relieved. The engine has now been used a sufficient length of time to prove that at least one half of the fuel now used upon our railroads can be saved, which is a very important item to all interested in railroads. The arrangement is very simple in its construction; indeed, the cost of an engine is very much diminished by it—there being fewer pieces and joints to keep in order. It strikes us that the matter is worthy the attention of the railroad community. Those who may wish to obtain information respecting it, can do so by calling upon Mr. Marks, the inventor, who resides at 26 Oxford street, or Mr. A. S. Adams, Master Machinist of the Boston and Worcester Railroad.—*Boston Traveller*.

TO IRON MANUFACTURERS.

IMPORTANT INVENTION FOR ROLLING RAILROAD BARS

Mr. Wm. Harris, late of the Rolling Mill firm of Harris, Burnish & Co., of this place, has just eompleted an invention for the manufacture of Railroad Iron, which in the opinion of our ablest mechanics is likely to give a fresh impetus to the Iron Manufacture, and to effect corresponding changes throughout the entire trade. It consists in a new method of arranging the Rolls, and cannot fail wherever understood, to entirely supplant the old process. Mr. H. is a practical Iron Manufacturer, and has been actively engaged in the business for the greater part of his life. He is now about 34 years of age. His attention has for many years been given to an improvemect of this kind, manifestly so much needed.

By the old (present) plan, each pair of Rolls has nine separate grooves, through which the heated mass from the furnace is successively passed, until it is delivered from the last in the shape of a Railroad bar—Much manual labor is required; and even with the most skillful and expeditious workmen, the metal has time to cool very considerably before it is finished, thereby becomeing less malleablo, and causing a dangerous strain upon the machinery. The breaking of a Roll in such a mill, it is well known, is but a common occurrence.

Now, instead of the one set of Rolls, containing the nine grooves, by the *new* process there are nine separate pairs of Rolls, each having but one groove—arranged in one continuous line, with close ducts or boxes between; so that the "pile" (the hot ball of metal) is fed in at one end, and comes out at the other a Railroad bar! The principal advantages claimed are—economy of time, and saving of manual labor—highly important considerations, as all Iron manufacturers well know.

Let us compare (and our data throughout, it may be proper to remark, are not mere guesses, but have been ascertained by accurate calculations):—By the old process, a bar of 21 feet, the usual length, is manufactured in 2½ minutes; by the new, in the same time, one of 100 feet could be run out, if the "pile" could be prepared; or, with the speed proposed for the new machinery, a bar 30 feet long may be finished from the "pile" in 30 seconds!

By the old plan, 10 men and boys are ordinarily employed in the Rolling process alone—by the new, but one; and his business would be solely that of superintendence--there would be no manual labor for him. For instance. the Heater brings his "pile"—it is put in at one end of the continuous line of Rolls, and requires no farther manipulation till it is delivered, a Railroad bar, at the other.

Another prime advantage claimed by the new process is, the manufacture of the "Red Short" iron into railroad bars. This species of iron, it is well known to manufacturers, possesses a peculiar brittleness when hot, that renders it difficult, if not impossible, to work by the old process, though remarkably tough when cold—having a long fibre and making the best of Railroad iron. On the new plan, the time occupied in the manufacture of a bar is so short, that the metal can easily be retained at a workable temperature during the entire process. This will undoubtedly tend greatly to improve the general character of Railroad iron; as the "cold short," now mostly employed for that purpose, (because it is most easily worked) becomes exceedingly brittle when cold, being in very many cases not much better in that respect, than common pig metal.

The new machinery used is of the simplest mechanical construction, and not at all likely to break or get out of order. It consists mainly of a horizontal shaft, to which are attached, by plain bevel gearing, the several Rolls; some revolving vertically and others laterally (in order to compress the metal on all sides.) The Rolls are set apart at distances corresponding with the successively increased lengths of the "pile," in its passage through them—the first four or five being comparatively close together. Hence, the entire length of the line of Rolls, for manufacturing bars, say 21 to 30 feet long, would not exceed 100 feet. No more power is required than in the old process, as the metal is acted upon but by one Roll at a time; and not near so much toward the finishing, as in the old process, the metal has by that time cooled very much, and, of course, is less malleable; while by the new, the whole operation is performed so speedily, that the temperature of the metal is very little reduced.

A *Caveat* was filed at Washington some time last winter, and application for a Patent for the invention is now pending in the names of Messrs. Harris & Geo. Bright. A model may be seen at the Hardware store of the latter, in this place.

As to the cost of a Mill, constructed with the new Rolling machinery, a liberal estimate places it at about 15 to 20 per cent. more than the present expenditure; but the new Rolling apparatus *alone* will not cost more than 10 per cent. over the price of the present Rolls. The other increased expense results from the additional number or improved capacity of the furnaces, necessary to supply the new Rolling machinery; and of course is to be considered in connection with the proportional increase of manufacture. This will become plain by a simple calculation:—A Mill constructed on the old plan can work up about 70 tons of metal in 24 hours; that is, in the largest establisments, with the best of machinery and the most experienced workmen. But, with the new Rolling gear, 120 tons can be manufactured in 12 hours; or, nearly four times as much—the yield in both cases being limited by the Rolling power. The principal difference, therefore, so far as cost is concerned, after the new Rolling apparatus is introduced, is in the additional number of furnaces required to keep it going.

There are other incidental advantages connected with this invention, that we have not attempted to enumerate—we may have occasion to allude to it hereafter. The model has been examined by a great many persons, and the actual process of manufacture performed with small bars of cold lead. The general opinion expressed is admiration and implicit confidence in its success. We commend it specially to the notice of Iron Manufacturers throughout the country.—*Pottsville Journal.*

BUFFALO AND NEW YORK CITY RAILROAD.—We learn from the *Buffalo Commercial Advertiser* that Mr. A. D. Patchin has become the lessee of the Buffalo and New York City Railroad, and will henceforth have the entire management of its affairs. The rolling stock of the road had been previously acquired by Mr. Patchin by purchase.

THE ATLANTIC AND PACIFIC: NEW ROUTE VIA HONDURAS.

We take the following from the *N. Y. Courier and Enquirer:*

The idea of a ship canal, through or near the Isthmus of Panama, is now relinquished, both by European and by American capitalists. We have already one railroad nearly completed, undertaken and faithfully continued with the aid of New York capital, for the purpose of facilitating travel between the Atlantic and Pacific oceans. The Panama Railroad Company have accomplished a great work—one that will be, for a century at least, regarded as a monument of American enterprise. There is another and a somewhat similar enterprise conceived, and, in fact, in its early stage for construction. This is the "Honduras Interoceanic Railway," leading from Puerto Cabello on the Gulf side to the Bay of Fonetca, on the Pacific coast, between the latitude 13 deg. and 16 deg. north.

Chagres and Panama, now the *termini* of the Panama Railroad, are somewhat south of 10 deg. San Juan del Norte, the Gulf port of the Nicaragua line, is about 11 deg., and between the Honduras proposed ronte and the present Panama route.

A preliminary report upon the route now suggested has been made by Mr. E. G. Squier, accompanied with letters from Mr. Amory Edwards, of this city, who has personally made a tour of observation through the country described, with a view to test its fitness for a railroad. Of this new route the published report says:

"The line of the proposed "Honduras Interoceanic Railway," commences at Puerto Cabellos, on the Bay of Honduras, in lat. 15 deg. 49 min., and lon. 87 deg. 57 min. W., and runs nearly due south, across the continent, to the Bay of Fonesca, on the Pacific, in lat. 13 deg. 21 min. N., and lon. 87 deg. 35 min. W. The total length of the line from anchorage to anchorage, or from five fathoms of water in Puerto Cabellos to five fathoms of water in the Bay of Fonesca, is 148 geographical, equal to about 160 statute miles. This line lies wholly in the State of Honduras, whose territorial right and sovereignty over it has never been called in question. Starting at Puerto Cabellos, the line of the proposed road pursues a course a little east of south, across the plain of Sula, until it strikes the Rio Ulua, near the town of Santiago. Thence it follows the valley of that river, now called the Humuya, to its very source, in the great plain of Comayagua, a distance of not far from one hundred miles from Puerto Cabellos. At the southern extremity of this plain there is a slight elevation, which constitutes the "summit" between the Atlantic and the Pacific. Here the sources of the Humuya interlock with those of the Rio Goascoran, which flows through its proper valley into the Gulf of Fonesca."

In stating the elevations to be overcome by the new road, the report alludes to the maximum grades of companies in Massachusetts, New York, Maryland, &c., viz:

Baltimore and Ohio Road, per mile	.....	116 feet.
Baltimore and Susquehanna, "	.....	90 "
Boston and Albany, "	.....	89 "
New York and Erie, "	.....	60 "
Tehauntepec (proposed road), "	.....	64 "
Honduras (proposed road), "	.....	55 "

[The statement of grade at Tehuantepec is irrespective of half a mile of tunnelling.]

Lieut. Maury, of the Navy, states the distance (in round numbers) by the several routes through the Gulf of Mexico to be as follows:

From New York to San Francisco, via Panama, ... 5200 miles.
From New York to San Francisco, via Nicaragua, ... 4700 "
From New York to San Francisco, via Honduras, ... 4200 "
From New York to San Francisco, via Vera Cruz and Tehauntepec, ... 4200 "

Of the elevations, it is stated that fifty miles of the proposed road will have an average grade of 17 feet to the mile; the next forty miles an average grade of 25 ft. 2 in. to the mile. For the division of fifteen miles crossing the summit, the maximum grade, irrespective of probable lessening of grades by a summit cut, will be 55 feet to the mile, and that only for a short distance. From thence to the Pacific the maximum grade will not exceed 45 feet to the mile. The sum total of ascents and descents, from sea to sea, is 4600 feet, which gives an average grade of a little over 28 feet to the mile.

Should the route be finally as favorable as is now represented from a preliminary survey, there is no doubt that the Honduras road will form an important link of communication between us and California, as well as between us and the Pacific ports of South America. There will be ample business for the new route as well as for the other two now in operation.

Public attention has been much excited for a year past to the great Pacific Railroad, through the United States and its Territories. This work, if ever accomplished, can never be adapted to the transportation of merchandise. Railroads cannot compete with navigable waters in the carrying of bulky articles. Hence, the transportation of cargoes hence to California, via Honduras or Panama, must ever be made at a slight cost compared with that upon a railroad of several thousand miles in length. The Isthmus will, it seems to us, remain the great thoroughfare between the Pacific and the Atlantic; and the railroad must be relied upon as the most rapid means of communication.

The Honduras route presents advantages in the shape of fine harbors at the termini on both sides—abundant wood and a good climate. Upon these points the letter of Mr. Edwards states:

"I have availed myself of the opportunity afforded by my visit, to go over the proposed line of our road, between here and the Pacific. I am most favorably impressed with the facilities for construction, and the easy grades which it affords. The only heavy work will be for about two miles, near the summit, where the side cuttings will be through chalk hills yielding readily to the pick. I am satisfied that for two thirds of the entire line, the road will only require to be levelled to prepare it for the superstructure.

The Gulf of Fonseca, our southern terminus, requires no detailed account from me. I will only remark the extraordinary circumstance that our northern and southern termini will be in harbors without bars at their entrance, and where the water gradually shoals from deep soundings to ten, nine, eight, seven, and six fathoms—this last depth close to the land, at the most secure possible point for wharves or for anchorage.

Memphis and Charleston Railroad.—The Directors of the Memphis and Charleston Railroad have sold $400,000 of their 7 per cent. bonds to their own stockholders and other capitalists of the East Tennessee Valley on the terms proposed by them. This will enable the Company, with their other means, to lay their track through Alabama, (150 miles) except 25 miles of iron west of Tuscumbia.

NEW SELF-ACTING RAILROAD SWITCH.

A promising and important invention in railroad switches has attracted recently a considerable degree of attention from those interested in such matters. It is proposed that the track be changed by means of machinery without the intervention of a switch-tender, and that in such a way as to be of immediate practical benefit. A frog is placed between the rails of the track, connected with levers by the rails to be moved, and as the engine passes over, a toggle is dropped, which, passing through a groove in the center of the frog, and pressing laterally upon the flanges or sides of the groove, instantly, and with great precision, effects the requisite change. If this invention can be successfully carried out in practice, then in the first place the requirement of switch-tenders is done away, and the safety of passengers from accidents resulting from the carelessness or inefficiency of those appointed to tend the switches, is materially enhanced.

This improvement is so constructed, that the engineer, by attending to his duty in relation to the switch, it becomes of no moment whether the track is right as the train approaches, or not, since the result will be the same. If, in the darkest night, the train ought to proceed upon a track diverging from the one it is running on, the engineer has but to drop the toggle, and if the switch is not correct it will be set right as the engine passes over it. Again, by the use of this invention, the engineer on the train, without the assistance of hands upon the track, can run the engine off on one track, leaving the train of cars in the rear to proceed on the other.

Letters-patent have been duly secured, and various models have been constructed and exhibited, and met with universal approval and admiration. The honor of this invention is due to David H. Rickards, who has already won laurels as an inventor. A company has been formed, consisting of capitalists and scientific men, and the general introduction of this improvement may be confidently predicted.

A trial has been made, and the experiment has proved abundantly successful. Louis S. Dennis, who has had the management of the affairs of the company, obtained—through the kindness of the Superintendent and Directors of the Boston and Maine Railroad—leave to make an actual trial upon the road, and the necessary preparations were made upon the Branch road at Wilmington, and a number of gentlemen were invited and were present to witness the experiment. The passengers were seated in the car, and passed safely and smoothly to and fro over the track, the change being effected without any motion or shock whatever being made sensible to those within.

The machinery is remarkably simple, and capable of being constructed so as to be exceedingly strong and durable, and in no way liable to get out of order or repair. It is free from the usual objections that have been urged against all attempts heretofore at the construction of self-acting switches. Those best competent to give an opinion, have pronounced this invention to have all the elements of complete and speedy success. Much time, labor, and money have been expended in maturing and perfecting the original plan, but appearances seem to indicate that the outlay will be amply repaid. Another exhibition is speedily to be given, and an opportunity will be afforded thereby to those desirous of witnessing its operation and of examining and judging for themselves.—*Boston Daily Herald.*

MANUFACTURE OF IRON.

A most important improvement in the manufacture of this useful metal has been successfully tested in Birmingham, England.—The inventor, Mr. Morris Stirling, is already favorably known to our readers by the various improvements that he has made from time in all kinds of metals. By his process, economy of labor and fuel is attained, and an improvement in the quality of the metal produced. The worst descriptions of pig-iron, totally unsuited, without previous refining, to the manufacture of malleable iron, is produced in a brief period to a good serviceable bar-iron. The necessity for refining is entirely superceded; and pig-iron prepared by the patent process puddles easier, more quickly, and with much less waste. The iron is placed more under the control of the manufacturer, and the various properties of stiffness, malleability, toughness and hardness, are given with great facility, and many defects now observable in the manufacture of iron are almost removed. It can now be worked in double furnaces, where only plate for refined iron is now used. The whole of the operations are conducted at the pig-bed of the blast furnace, so that no change in apparatus is necessary.

The materials to be used it is intended to have in store, in central depots, to be served to the iron trade as cheaply as possible; there are certain oxides which are employed when the iron is puddled. It has been objected to that the puddling takes place too rapidly, but this can be remedied by a less application of the quickening matter, or the admixture of common with patent pigs. The process has likewise been tried on the Continent, and found to give the most satisfactory results.—From the long experience of Mr. Morris Stirling, and the practical benefits which have arisen from his former inventions, there is no doubt that this is not in any way inferior to its predecessors; and will, in its application, not only confer a great boon on the trade, but likewise a corresponding advantage to the consumers of iron.—*English Paper.*

Manchester Railroad.—At the annual meeting of the stockholders of the McMinnville and Manchester Railroad, at Manchester, the following gentlemen were elected Directors, for the next 12 months:

P. H. Marbury, D. G. Stone, P. H. Coffee, H. H. Harrison, L. D. Mercer, Gen. W. C. Smartt, W. A. Hickerson, Gen. Wm. Moore, J. F. Colville, G. M. Smartt, John Briant, A. Black, R. B. Cain, I. P. Thompson, and F. K. Bell.

RAILROAD SECURITIES.

We commend the following to the attention of our readers.

Recent events have effectually checked the establishment of new railroads throughout the country, and removed all uncasiness that much additional capital will immediately flow into this channel. This complete change in the tendency of affairs was necessary for the security of the country in financial matters, and could only be accomplished through a shock of the severest character. It is the unfortunate result, however, of a sudden and great change in the habits of the community with respect to investments, that the distrust which in part occasions it, is powerfully communicated to other interests, which are eminently entitled to the public confidence. The railroads in the United States, in actual operation amount to between fifteen and sixteen thousand miles, upon which there has been an actual expenditure of about five hundred millions of dollars. The most cautious financier in this State, observed to us in a conversation with respect to the embarrassments now existing, that the roads had added more than this sum to the productive power of this country, and to the value of other property. They constitute the main instruments of internal transportation of nearly every State in the Union ; and such is their extent, that they may be said to enter into all the relations between man and man in every quarter of the United States. They perform a high service in a social and political point of view. They cement communities and states together, and have a powerful influence in defeating all attempts to disturb the harmony of the country. In a time of trouble from external enemies, they will be found to constitute a great arm of self defence, and render us invincible against foreign attack. It must at once be seen, that such interests are entitled to favor and protection, and that distrust can not be extended to what is so vast, wide spread and so valuable, without great manifest wrong and injury.

And yet, the amount of capital thus invested, so great when viewed by itself, becomes far less imposing when compared with other interests. The amount of capital invested in live stock in the United States, appears by the last census, to exceed that invested in railroads, by upwards of forty-three millions of dollars. The capital invested in manufactories producing over $500 per annum, exceeds that invested in railroads over thirty millions of dollars. The total amount of gold deposited in our mints, obtained from California in six years, through the industry of a small population, is equal to about one half of the whole capital invested in these roads, in the construction of which an infinitely larger amount of labor has been expended than in the mines of California.

These comparisons present the subject of railroad investments in a more favorable light than would be imagined possible, by those who listen to the interested repinings of stock gamblers, over the alleged disproportion which investments of this character are supposed to create, beyond what was legitimate and expedient. Whilst it was right to apply a check to the creation of new roads, it is wholly unjust and wrong, and damaging to the great interests of the country, to make an indiscriminate warfare upon all establishments of this character. The check applied to the new, makes those which are already created more safe and secure.

The depression with respect to roads now profitable, or to those which are well devised and are likely to be, can only be of a temporary character. Railroad securities partake of the nature and solidity of real estate, and must rapidly recover from the effect of the frauds which the manager of one of them has been enabled to commit in a time of unusual confidence ; when suspicion has been lulled partially to sleep through the ease with which abundant means were procured. It would seem to be the policy of all substantial men, by a firm and manly course, to check those interested attempts to depress the value of property, which speculators for a depression unite to make. The establishment of new lines, proposed in many instances as parallel routes, has been effectually stopped. That, we repeat was necessary and proper. But, in respect to roads in existence, or near to completion, a favorable regard should be shown by those who have influence over the public mind, in order to turn opinion into the proper channel.—*Journal of Com.*

ANTHRACITE BURNING LOCOMOTIVE.

Mr. Leonard Phleger, of Tamaqua, has constructed an improved locomotive for burning anthracite coal, which promises to reduce the expense of railroad transportation very greatly. One of his locomotive engines, the Philadelphia *Ledger* states, has been running daily between Philadelphia and Havre de Grace, on the Wilmington and Baltimore Railroad, for over two weeks. It has been attached to the express train, consisting of six or eight passenger cars, and consumes, as we are informed, only two dollars worth of coal per day. The wood-burning locomotive which it replaced. consumed twenty-four dollars worth of wood per day. Phleger's engine has, it is said, fully as much power as the other locomotive, snd runs at the same speed. The furnace and boilers of the locomotive do not show the slightest signs of injury from fire.—The above information was derived from the engineer in charge of the locomotive, from whom we also learn that the locomotive has given great satisfaction to all upon the line of the road, who have examined it, and that it also effectually prevents the annoyance and danger from sparks. These are facts to be verified by the personal examination of those interested in the success of the experiment. If these representations are fully borne out after a sufficient test, the invention is a very important one to railroad companies. The furnaces and boilers of the Phleger locomotive are all built on an entirely new plan, from which the improvements result.

Orange & Alexandria Road Extension. —The people of Amherst county, Va., have voted, by a large majority, in favor of a county subscription of $50,000 to the Lynchburg extension of the Orange and Alexandria Railroad. The Alexandria *Gazette* learns that it is the intention of the Board of Directors to put the 60 miles from Charlottesville to Lynchburg under contract, as soon as this subscription is secured.

Baltimore & Philadelphia Railroad.— A correspondent of the Washington Union bestows merited praise upon the management of this road. He says :

Permit a traveler to notice, through your journal, the praiseworthy improvement now so happily blended with the comfort of travelers in the *new reclining seats* in the cars, now in use, prepared by the Philadelphia and Wilmington Railroad Company, for the ease and gratification, comfort and convenience, of all those who may, from business or pleasure, be called upon to visit the North. What a contrast to the traveler, in his journey north from Baltimore, can be experienced in the visit now to what it was in times past, when called upon to perform a short trip north on business or pleasure.

Why can not the "Owl trains" of our roads be supplied with these sleeping chairs ? We know from experience that they would be very acceptable.

ROCHESTER SCALEWORKS.

In *Dye's Bank Mirror* we find the following notice of these extensive and popular works, viz :

Among the many items we call attention to, we would remember Messrs. Duryee & Forsyth, of Rochester, N. Y., manufacturers of scales and safes. This enterprising firm has been before the public a number of years with their wares, and have gained a world-wide reputation.

Their scales are known by their correctness and durability. Their safes are of a superior finish, and contain materials proof against fire—as has been proved in all instances when subjected to the test. Recently one of their *Fire Kings* was in a large fire at Brantford, C. W., with a large sum of money, books, and papers in it, and all were preserved in good order—all of which speaks well for the manufacturers. Early this spring they erected a Railway Suspension Scale at Cleveland, for Messrs. Otis, Knight & Co., for weighing wheat by the car load. This scale was constructed upon a new plan invented by the senior partner of the firm (Mr. Duryee), and is well worthy the attention of all railroad companies, and others wanting such scales. This scale is of great utility, and must be far preferable to the old way of constructing them.

Railroad companies, merchants, and others are under obligations to Messrs. D. & F., and we are glad to know that they are winning golden opinions all over the land—and that their trade is very rapidly increasing. They are gentlemen of honorable dealings, and worthy of public patronage.

The advertisement of the "Rochester Scale Works" will be found on the inside of the cover of the Record. We commend those in need of anything in this line to a perusal of it.

CINCINNATI STOCK SALES.

AT THE STOCK BOARD,

MERCHANTS' EXCHANGE

And at Private Sale.

BY HEWSON & HOLMES,

For the week ending Wednesday, August 9, 1854

THE SALES WERE AS FOLLOWS:

No Report.

MONETARY.

We have no material change to note in the Money Market at the East. There seems to be plenty of money, but a great lack of confidence on the part of capitalists; the recent transactions in the stock market has caused general suspicion, whicb it will take some time to eraeicate entirely.

Bank deposits increase, and there seems to be abundance of capital floating about, seeking temporary and secure iuvestment. We quote call loans at 6 a 7 per cent. Number one business paper, 60 a 90 days, 8 a 10 per cent. Prime paper, 4 a 6 months, 10 a 12 per cent. Railroad securities are difficult of placement.

The Stock Market has fluctuated considerably during the past week, and reached the lowest point of tbe seasou. We can discover no particular cause for this unwonted depression, other than the great amount of stocks pressing upon the market. Toward the close of the week, the market rallied, and closed at about our quotations.

For permanent investments, some of our dividend paying roads uow offer rare opportnnities, which capitalists will, undoubtedly avail themselves of.

Foreige Exchange rates at 109 a 109⅜

The stock sales of tbe week bave been a4 follows:

By A. H. NieOiay, July 31—

At the West, we find nothing new in Monetary affairs. The supply of capital has been fully equal to the demand, so far as strictly prime business paper is concerned, which has been readily placed at about 1 per cent. per month. Less known paper is negotiated with difficulty, and at rates, from 1½ to 2 per cent. per month, the latter tbe ruling rate.

Rail oad securities, with few exceptions, and those of the best class, can not be negotiated unless at great sacrifice.

The prospects of the money market continue to brighten, and bid fair to improve, unless some unforeseen check should again darken the horizon. Business, as usual at this season, is dull, and will continue so for a time

In the Stock Market we notice an almost entire stagnation. There are no sales made public, to any extent, from which to judge of the state of the market, Forced sales of hypothecated stocks are no criterion of value, and these are nearly all the sales now made in this market. Business will re-commence with the season, and then stocks will approximate more nearly their real value.

LIVING WITH HIS NECK BROKE.—We lately noticed the extraordinary death of Mr. Levi Bringham, of St. Johnsbury, Vt., by the act of an enraged stallion. The following singular circumstance, showing that the breaking of the neck bone does not of necessity cause immediate death, are added by a correspondent of the Rattleboro *Eagle* :—

"The fracture of the neck compressed the spinal marrow so violently as wholly to prevent it from affordiug any communication between the brain and body. As a consequence, the whole body below the fracture was paralyzed, deprived alike of sensatiou and power of motion. But he retained the full possession of his mental faculties and conversed intelligently. Not only this, but by means of the nerves not involved in the calamity of the spinal marrow the brain kept up its communication with the vital organs, and maintained the exercise of their functions for nearly two hours. But the manner in which those fnnctions were exercised was very unusual. Especially was this the case in regard to respiration. Ordinarily this is carried on mainly by the action of the intercostal muscles upon the ribs, and as these rise and subside, respiration and expiration take place. By the injury of the spinal marrow those muscles were deprived of their ordinary nervous stimulus, and consequently were wholly inactive. The whole was assumed by the diaphragm, which faithfully performed its duty while the lateral walls of the chest remained motionless. In this manner he continued to breathe during the brief remainder of his life."

BROOKLN CITY RAILROADS.—Eight cars were put upon the new city railroad tracks in Brooklyn, on the 1st of July, 1854, and run over all the routes as far as completed. Runs were made on the Sand street, Myrtle Avenue, Fulton Avenue, and Court street routes; and with the exception of some trifling defects at the curves, everything was found to work remarkably well. Brooklyn now has railroads running all over the city, for the accommodation of its sensible and intelligent citizens.

Miscellaneous.

SELF-REGULATING WIND-MILL.

Daniel Halliday, a mechanic in an obscure country villiage, Ellington, Connecticut, says the *New York Tribune*, has done what the world of mechanics have sought for in vain for centuries. He has invented and put in successful operation, a Wind-mill with *self-furling sails*. The mill built by him has five feet wings, that is, the diameter of the wind wheel is ten feet, and it has been in operation six months without a hand being touched to it to regulate the sails. It ran fifteen days at one time without stopping day or night, and it has stood through some hard gales; the beauty of the improvement is that it does stand still when the wind rages hardest, with the edge of the wings to the wind, and as it lulls they gradually resume their position for a gentle breeze, It is so contrived that nothing but a squall of great severity falling upon it without a moment's warning can produce damage.

The mill mentioned has drawn water from a well twenty-eight feet deep, one hundred feet distant, and forced it into a small reservoir in the upper part of the barn, sufficient for all farm purposes, garden irrigation, and "lots to spare." The cost of such a mill will be $50, and the pumps and pipes about $25. It is elevated on a single oak post a foot square, the turn circle being supported by iron braces. The wings are made of one longitudinal iron bar, through which run small rods; upon these rods, narrow boards half an inch thick are fitted, holes being bored thro' from edge to edge, and screwed together by nuts on the ends of the rods. This makes strong light sails, but as will be seen are fixtures not to be furled or clewed up; but they are thrown up edge to the wind by a very ingenious and simple arrangement of the machinery, which obviates the great objection to windmills for farm use; the necessity of constant supervision of the sails to suit the wind.

Wind is undoubtedly the cheapest power that a farmer can use, and, notwithstanding its inconstancy, if this improvement operates as well as it bids fair to in the single mill erected, it will be applied to many valuable uses. By wind-mills swamps may be drained and upland irrigated. What an advantage would be the latter in such a drouth as prevails now in many parts of the country, beside the great amount of fertilizing matter in water at all times. The wind-mill could be used too for all grinding of grain for farm use, driving the washing-machine and churn, pumping the water from the well or spring—often one of the hardest kinds of labor about the house. Liquid manure, and the solid excrement made of liquid, could be sent a field through leading pipes by the same power.

We do earnestly hope for the success of this improvement—that it will not only be an ornament but a thing of usefulness to many American farmers.

SUCCESSFUL SURGICAL OPERATION.

A singular case happened in the practice of D. A. G. Walters, of this city. George Keeny, a resident of Indianapolis, has had for the last ten years an obstruction in the vision of the right eye, occasioned by the presence of a living body, which floated or moved in the liquid of the anterior of the eye. It was quite small at first, but within a year or two had increased in size and activity, so as not only to obstruct the vision, but be productive of great pain.

Two attempts had been made by eminent surgeons in Cincinnati, and Louisville, to remove it, but in vain, as the little animal succeeded in eluding capture. The patient put himself under the care of Dr. W., who succeeded in relieving him, by making an incision into the eye, only large enough to allow of the introduction of a minute pair of forceps, and carefully guarding against the escape of the aqueous humor, which baffled the other surgeons, as, when the animal found it leaving him, it shipped into the posterior of the eye, and could not be reached. He thus seized and removed it. It was a worm, about one eighth of an inch in length, by a sixteenth; was a milky color, and very active.

After catching the worm, the Doctor was compelled to enlarge the incision in the cornea, for the purpose of removing it. Cases similar to the present have been occasionally observed, and the worms are similar to those found frequently in the stomach, and sometimes, though very rarely, in the inner ear, from which, in a case in Pittsburg, Dr. W. extracted one two inches in length.

The interest of this operation is increased by the fact, that the animalcula had twice before eluded capture, owing to its activity in retreating to its fastnesses, beyond the reach of the surgeon's instruments.—*Pittsburg Journal.*

Stock Frauds.—The Legislature of New Hampshire have moved in the matter of over-issues of shares in the stocks of corporations and have passed the following law, to take effect after July 15th:

"Any president, cashier, treasurer or secretary, or any other officer or stockholder of any bank, railroad, manufacturing or any other corporation in this state, who shall knowingly, falsely and wilfully, sign, issue or cause to be issued, any shares in the capital stock of their respective corporations, other than those authorized in their charters, or by some amendment thereto, shall be deemed and adjudged guilty of felony, and when duly convicted thereof, shall be punished by a fine not exceeding one thousand dollars, and imprisonment in the State Prison for not less than one or more than seven years, at the discretion of the court."

This example should be followed by every state legislature in the country, that the public may be protected from such infamous transactions, now called merely "breaches of trust" by the law, but considered by the community as frauds of the worst character.

Locomotive Turn Tables.—We would call the attention of Railroad Companies to the advertisement of D. M. Carhart, as it appears in our columns.

Mr. Carhart has manufactured these tables for a number of years, and for the greater number of the Western Companies, and has, in every instance, we believe, given full satisfaction. A perusal of the references offered, will give evidence of the estimation in which they are held.

Mr. Carhart, also, builds draw and other bridges.

Companies needing Turntables, would do well to communicate with him before making bargains elsewhere.

Peoria & Bureau Valley Railroad.—The rail has been laid on this road from its junction with the Chicago and Rock Island railroad to within three miles of Henry on the Illinois river. About thirty hands are at work on that portion of the road, which will be completed to Henry in a few days. The road is very good for a new one, and it runs through a finely cultivated country.—*La Salle Herald.*

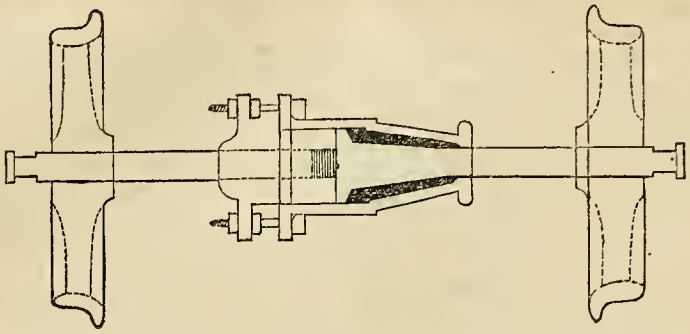
ACKNOWLEDGEMENTS.

The Steam Engine: By Dr. Lardner, with additions and Notes, by James Renwick, LL.D., of Columbia College, N. Y. Sixth American from the fifth London edition, profusely illustrated with engravings and cuts.

The original work by Dr. Lardner, upon the Steam Engine, was considered one of the best elementary works for popularizing the subject, ever issued. The present edition may be said to be a *new* work rather than a new edition, inasmuch as it has been almost entirely re-written, and much enlarged; three new chapters having been added; thus embracing all the new improvements of the day, in Steamboat, Stationary, or Locomotive Engines.

It contains a great amount of matter pertinent to the subject, which will greatly assist persons desiring an insight into the principles of the Steam Engine.

It is published by Messrs. A. S. Barnes & Co., New York, and for sale in our city by Truman & Spofford.



Hunt's Merchants' Magazine: The August number of this valuable journal is at hand, replete, as usual, with standard valuable matter.

We commend to the public the leading article upon the Russo-Turkish question, and the able article upon the recent fraud in Wall street, New York.

The Western Journal and Civilian:—Traber & Cobb, Editors, St. Louis, Mo. The June number of this valuable monthly is at hand, and contains able articles upon Agriculture, Manufacture, Internal Improvement, and statistics of Western affairs generally, which we find very valuable.

It is published monthly, at $3 per annum.

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable feaiurcs of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed hy the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the carleaving the track from its having become spread.

Axles fitted in this way do not reqnire to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the cnrvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels. than is contained in the hearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, hy a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it ean hc refilled, making it as perfect as when first fillod up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of tho most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction hy giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has heen given. All applications to he made to

SAMUEL L. DENNEY,

NOTICE TO CONTRACTORS.

Ashtabula and New Lisbon Railroad.

ON and after the 5th of August, 1854, proposals will be recived at the Company's Office in Ashtabula, for the Graduation, Masonry and Bridging of about 36 miles of the Northern Division of said road, extending from Ashtahula Harbor, south, to Bristol, in Trumbull county.

The work will he divided into sections of about one mile each. Maps, profiles. plans, specifications, &c., will he ready and open at the office in this place, from August 15th, and until September 1st.

Contractors are invited to propose for the whole work. The work will declared off as soon after the 1st day of September next, as proposals shall be received and approved.

R. W. GRISWOLD, President.
WILLIAM HALE, Chief Eng.
Ashtabula, July 17th. 1854. au.10-tf.

NUGENT'S COLLEGE
OF
ENGINEERS & MECHANICS,
PUBLIC SQUARE, CLEVELAND, OHIO;

C. NUGENT, C. E., Principal.

THE design of this Institution is to afford young men an opportunity of acquiring a knowledge of the profession of Civil Engineering, and to Mechanics and Tradesmen a sound theoretical and practical knowledge of Mathematics, Architectural and Mechanical Drafting, Plain and Ornamental Penmanship, &c. For further particulars address the Principal. au.10.

To Railroad Contractors, Quarry Men, &c.

THE attention of those interested is called to ASH'S IMPROVED HORSE POWER ROCK DRILL, for Railroad Excavation, Stone Quarrying, Well Boring &c.

This Drill is worked by HORSE POWER, requiring but one horse and one man, to keep it constantly at work, with great ease and velocity, performing 60 strokes per minute. It is cheap of construction and repair. The AUGER weights from 300 to 500 pounds, will drill a perpendicular or inclined hole FOUR INCHES IN DIAMETER, at the rate of from 8 to 16 feet per day in ordinary lime stone. It has drilled 2 feet in one hour.

For rights to use for Counties or States, apply to the Patentee. WILLIAM F. ASH,

May 20, 3* Springfield, Ohio.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to

WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Boston, the Eriesson Steamers by Canal to Philadelphia and New York,

And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

J. B. FORD is the Company's Receiving Agent at Wheeling.

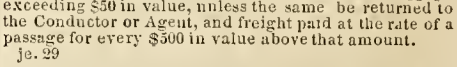
For other information and Tickets, apply at Ticket office, corner of Broadway and Front sts, and at the Little Miami Depot, or to the Station Agents on the line.

E. W. WOODWARD,
Engineer and Superintendent.



☞ The Omnibus Line will call for and deliver passengers to and from the trains to any part of the City.

J. HOWELL, Conductor.

☞ The Company will not be responsible for baggage exceeding $50 in value, unless the same be returned to the Conductor or Agent, and freight paid at the rate of a passage for every $500 in value above that amount.

je. 29

COLUMBUS PIQUA, AND INDIANA RAILROAD.

New route from Columbus, West and from Urbana, East.

On and after Monday September 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between COLUMBUS and URBANA. Will leave Columbus at 4.50 a.m., and 3.30 p.m.—arriving at Urbana at 8.12 a.m., and 6.14 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with the night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morning Cleveland and Zanesville trains can have a few hours at Columbus and leave by the 3.30 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton aad Cincinnati.

The 9.15 a.m. train from Urbana connects with the morning train from Cincinnati and Dayton that arrives at Urbana 8.40 a.m.—arriving at Columbus at 12.05 p.m in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Sandusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibuses will connect with the trains at Urbana for the conveyeance of passengers to and from Piqua and Greenville over a good Macadamized road.

RAILROAD IRON, LIGHT WEIGHT.

470 TONS, 47 lbs. per yard, good quality and pattern, now lying at New Orleans. For terms, apply to VOSE, PERKINS & CO.,
ap27-tf New York.

WINSLOW'S
PATENT COMPOUND RAIL.

THIS RAIL, which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a

THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are—a saving in the wear and tear of Machinery—it saves, to a great extent, in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable Being practically a continuous Rail for the entire length of the road, without break at the ends of bars, the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effects upon Cars and Machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at Hanging Rock Iron Works, upon the Ohio River, and at Mt. Savage Iron Works, Maryland. Specimens of the Rail and patterns of the same will be gladly shown, as well as information in relation thereto, given by application to

A. S. WINSLOW, Nos. 9 & 11 West Second Street, bet. Main and Walnut Sts., CINCINNATI.

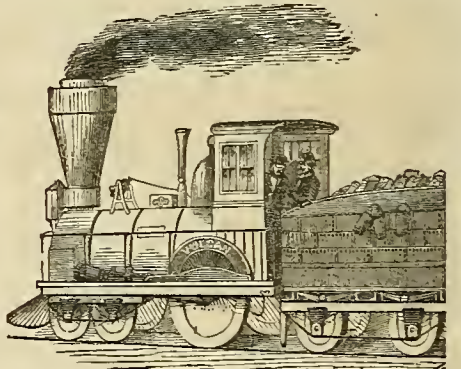
Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Reservoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.



The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,
PRINCIPAL AGENT,

OUR RAILROAD MAP---NEW EDITION.

We have now ready a new and revised edition of our RAILROAD MAP, containing corrections and additions from reliable sources, making it as reliable as it is possible to make such a map.

We are prepared to print maps for Railroad Companies to illustrate their reports, either from the stone as it now is, or make any alterations to suit parties. Railroad Companies will find this much more economical than getting up maps especially for their roads.

Price of maps as follows:

Plain, sized,	40 cents.
Colored in outline,	50 "
Colored in States,	75 "

A liberal discount where a number are taken.

FRANKLIN & WARREN RAILROAD.—At the the annual meeting of the stockholders of this road, held at Franklin, Ohio, on the 11th ultimo, the following Directors were chosen:

Directors.—Marvin Kent, Bela B. Clark, Thomas Earl, Zenas Kent, Daniel Upson, Jacob Allen, Daniel Beckel.

Marvin Ment, was elected President; J. W. Tyler, appointed Secretary; Zenas Kent, Treasurer.

The work is going forward steadily and rapidly, on the heavier sections of the line, says the Akron *Beacon*.

THOS. PROSSER & SON.

au.17 28 Platt street, New York.

DEPRESSION OF RAILROAD STOCKS, AS COMPARED WITH THEIR INTRINSIC VALUE. —CAUSES AND EFFECTS.

There is at present an extraordinary depression of railroad stocks, not at all commensurate with their intrinsic value. It amounts, in fact, to a financial phenomenon, and is worthy of special examination. That much of it is due to the recent enormous frauds in railroad shares, is no doubt true.—That something is also due to the money pressure, is true. But, even these will not account for roads which are *actually making* 10 or 15 *per cent.*—as to the balance of expense and receipts—selling below par. Money is not worth so much, and according to all the laws of trade, it should seek investment where such heavy profits are made.

We hold, that the principal cause of this depression of railroad stocks is to be found in *imprudent*, not to say wrong management of the directors of railways, in *actual operation*. The prices of stock in unfinished railways depend upon the estimation of those which are finished. If the finished railways, therefore, are mismanaged, and divide no dividends when making the largest professions, what trust can the public place in them? Now, the fact is, that some of the best running roads in the country proclaim to the world that they are making enormous profits, and at the same time divide *no dividends*. This is the real cause of distrust. Who knows whether the account of expense and receipts is correct? It would only be a little concealment, not actual fraud, to run some part of the expense into capital, and throw some into next year, so as to conceal the true state of the case.

The great public know little about the accounts. A common man, even a merchant not familiar with railroads, would not notice whether the *wear and tear of machinery* the *diminution of the road*, &c. were charged in the expense. Yet, if they do not come in this year, they must next.

In fine, the public judges banks, railroads, and all other corporations, by their capacity to divide a *cash dividend*. When they fail to do this, no excuse, (however plausible,) is available. The public know nothing about what unknown quagmires may be hidden behind the fact that the road *pays nothing*. The common excuse given by the directors is, that they must lay a double track. Now, there is no *must* in the case, or the directors have made a false return of profits. If the directory say that they have *actually made* 10 per cent. on the cost of the road, and in the same breath, that they must save this money to make a double track, they convict themselves. For, if they can make 10 per cent with a single track, they do not need a double one, for the purpose of making profits—that being the only inducement to invest capital. On the other hand, if a double track *must* be made they have not made 10 per cent; for the receipts must be divided on the increased capital. The truth is, the ambition of railway directors to grasp at more power, instead of looking to the profits of the investment, is the great source of doubt and distrust in monied men. They cannot comprehend that a railway corporation shall be continually making money, and continually making excuses for not paying the money to the legitimate owners. The public are in the temper and condition of a close financier, with a very *enterprising* son. The son launched out in various works and factories, and coming to his father, thought to startle him with an announcement of his extraordinary success: "Father, I have just made ten thousand dollars by that factory." "Glad of it; where is the money?" "Oh, I have not got the money; I bought it for ten thousand, and it is now worth twenty thousand." "But, John, where is the *money*?" "I tell you father, I hav'nt got the money with me; Johnson and Williams both offered me twenty thousand." "John, *where is the money?*"

The truth is, the only way to convince the public that stocks are worth anything, is to *pay a dividend*. With unfinished railways it is different. They are always graduated by the experience of others, and reasonable estimates made from the productions and commerce of the country.

As an example of the policy, which so many roads now pursue, we take one of the best and most profitable works in the country—and for that reason it is a better example. The following paragraph appears in the money article of the *Cincinnati Gazette*, of the 10th inst:

"The Cincinnati, Hamilton and Dayton Railroad Company have declared a semi-annual dividend of five per cent. in Script, payable in three years, with 7 per cent interest. The profits of the road for the six months, show an increase, but the earnings have been used for the purpose of laying the second track. This was deemed preferable to selling bonds at a sacrifice, It was generally supposed that the dividend would be passed—and some of the directors were, we understand, in favor of that course. The fact that a *cash* dividend was not declared, had an unfavorable effect on the stock to-day, but it will recover from this, the business of the road being satisfactory, and stockholders will ultimately be better off than if the earnings had been paid out in the shape of dividends, and money borrowed at exorbitant rates, to prosecute the work. The stock was held at 90, and 88 was bid."

How the stockholders are to be better off, by having their stock reduced several per cent. in market, and being told that they shall pay *out of their own pockets* 7 per cent., on money that ought to be in their pockets, may be very clear to them, but is a perfect mystery to us. The *ultimate* of such a transaction will be very curious- Suppose the road has

made precisely 10 per cent. They issue scrip for 10 per cent., payable in three years, at 7 per cent. Then they must pay 10.7 per cent. This 7 per cent. interest must come out of the next profits, which must therefore make just as much, and 7 per cent. on this, in order to be equal to this. In other words, the profits must go on with an annual increase, under all circumstances, or the dividend must be diminished. But, this is not all. The future dividend must be dividcd on a capital increased by the cost of the double track.—Now this is not a very encouraging view for John's father, which, in the present case, is the stockholders. But, if they are satisfied, we do not complain. It is, however, a good illustration of the policy we have commented on.

The stockholdeas of Railways, however, have a bright future; for railway shares are now so unreasonably low, that they must rise. There is the greatest possible margin for profits, both in investment and speculation.—Railway shares in unfinished railways, are selling from 20 to 50 cents on a dollar, which will be among the very best stocks in the country; and finished railways are selling at from 80 to 90, which *can*, if their directors please, pay from 10 to 15 per cent. forever. Since the great break down, when Ohio state stocks sold for 50 cents on a dollar, there has never been such an opportunity for the investment of capital, properly, as there is now, in many railways. The profit in the rise of stock, is certain. The movement of distrust and fear in the public, cannot long withstand the great fact of a *positive intrinsic value.*—The most cautious miserly old hunks will buy property when he is perfectly certain it is sold at a sacrifice; but, that certainty in regard to railway shares is now pressing strongly on the public mind. We have only to look back at the prices of Bank shares, and State stocks in 1842-3, to realize what the effects of a panic are, and how certainly the knowing ones are to make splendid fortunes out of the public timidity. The present panic will last but a short time; when a shrewd man will wonder why he could not have seen, and taken advantage of the opportunities now presented.

Ohio & Mississippi Railroad—Western Division.—The cars on this road now run to Carlyle, fifty miles east of St. Louis. The track is graded to Salem, and the rails are laid to within *eleven and a half miles* of the junction with the Illinois Central. The junction reached, the citizens of St. Louis can go to Cairo by railway, lacking only five miles.

Wabash Valley Railroad.—The final contract for the construction of this road has been closed. The stock has all been pledged and the sub-letting has taken place. We expect soon to hear of the completion of this line.

Railroads.

ATLANTIC & PACIFIC RAILROAD—SOUTHERN ROUTE.

Just prior to the adjournment of Congress last year, a resolution was passed by that body in which appropriations were made for a scientific exploration of not less than three routes between the Mississippi river and the Pacific Ocean, by government officers, with a view to the location of a railroad. The surveys have been made, the reports handed in, and further action postponed till December next, and there the matter remains. Congress has taken a recess of several months, and it is even doubtful that the subject will be reached during the session after it shall have re-assembled. In the mean time, prompted by the exceedingly liberal offer of the state of Texas, a company has been formed under the name and style of the "New York Atlantic and Pacific Railroad," for the purpose of effecting the uniting of the Atlantic and Pacific by iron bands, by way of what is familiarly known as the Southern, or Texas Route. The capital stock of the company being placed at $100,000,000.

In several instances we have somewhat disparagingly noticed the progress of this "*Moonshine Railroad,*" as it has been jeeringly named; rather with a view however, of keeping our readers posted as regards the railroad movements of the day, than from any hostility to the company itself, for we entertain no such sentiments; on the contrary, so ardently are we in favor of a Pacific Railroad, that we would gladly lend our aid to the consummation of a project, so much to be desired, did it present but a reasonable prospect of ultimate success; but candor compels the acknowledgment that the seeming extravagance of the entire scheme, did give to it such an Utopian coloring, that without due investigation we were fain to set the whole affair down as one of the numerous speculative railroad projects of the day, differing from its contemporaries only in its gigantean proportions; and thus regarding it, as offering but faint prospects of even a distant realization of its magnificent pretensions, we did not give it the consideration to which it was fairly entitled in this day of "great things," and probably our opinions would have remained unchanged but for the accidental perusal of an epitome of the report of Col. Gray, who was sent out by this company to make an exploration of the route from El Paso to the Pacific, a part of which report, taken from the *San Francisco Times*, we give herewith—and a recent article in the New Orleans *Daily Delta*, of 24th ult., headed "The Grandest Scheme of Modern Times—An Empire given to a Railroad Company," referring to this company, but whether *intended* as laudatory or condemnatory, we are at loss to guess. These had the effect to awaken a spirit of inquiry, and lead to a closer examination of the facts of the case,—whether this project, Utopian as it may at first glance appear, does not present the fairest prospect of being, not only the first completed, but indeed the only road between the two oceans, for a time at least, until the rival interests now dividing Congress upon this subject, shall have been settled by compromise or otherwise. For extravagant and wild as the undertaking may seem, it will, without a shadow of doubt, by the liberality of the state of Texas, be carried triumphantly through. The requirements of that state from the company have been complied with; the necessary security of $300,000 has been deposited, and before the 15th day of this month ground will have been broken, and the vast donation of some 42,000,000 of acres of the best Texas land, secured to the company, worth at the lowest estimate, $100,000,000, while the cost of the road completed, between the Mississippi river and the Rio Grande, has never been estimated over $20,000,000, leaving the balance available for the construction of the road from El Paso to the Pacific.

The report herewith given, by Col. Gray, and Lieuts. Park and Stoneman, contains a brief description of the route; not only demonstrating its eminent practicability, but confirming previous reports of its mineral wealth and agricultural capabilities. The region of country examined was that west of El Paso, and crossed by the 32d parallel of latitude, to Adair Bay, on the Gulf of California, presenting a line varying but a few miles north or south, with abundant supplies of wood and water, and grades nowhere formidable.

We could, had we space, enumerate other facilities possessed by this company; but with the facts before us, and aware that the project is in the hands of shrewd, business men, are we far out of the way in our conclusion that this road will be built, and that too, perhaps, while Congress is talking about other routes!

The report says:

Leaving El Paso where was found the best point for crossing the Rio Grande, Col. Gray's party proceeded to the Playos crossing Cook's route, to the north of Gaudalupe pass, thence in a direction nearly west, to "Tubac," in 31° 45′ north latitude, and continued with a very slight divergence, to "Altar" and "Pinacate," on the Gulf of California. For most of the distance the party was divided into three bodies, each prosecuting separate examinations. From "Boosana," a little south of 32°, at the head of the river Altar, sixty miles from "Tubac," one party proceeded west, touching the Gulf at "Pinacate" on Adair Bay. At this point the harbor is regarded but moderately good, rather of the character of a roadstead. High sand hills surround the bay, and the neighboring country presents but few advantageous features.

Another party leaving Altar, struck northwest, passing through the mining town of "Sonia," where they found a number of Mexicans engaged in getting out gold with arastras, and employing large squads of Indians. These

mines were reported to have yielded well before the gold discoveries in California. Col. Gray obtained here a number of valuable specimens. Placers of gold were frequently encountered. At the ranch of Sonoita fine specimens of gold were obtained, and at the Plancha de la Plata, south of Tubac, very rich specimens of silver. The stretch from Fort Yuma to "Tiniga Alta," is sixty miles without water, and to "Sonoita" fifty miles. From the junction of the Gila and Colorado to Altar, the distance is about one hundred and eighty miles. From Tueson to Tubac, forty-five miles in a line a little east of north, the country produces fine wheat crops. In this section, between Tubac and the ranch of "Calavazas," Col. Gray's party was surrounded by 140 Indians, who had followed him down Sonoita Creek, emptying into the Santa Cruz river. The day after, a troop of Mexican cavalry from the garrison at Tueson numbering 50 soldiers and 25 friendly Apaches, attacked the Indians, dispersing them with great slaughter and leaving 16 dead bodies upon the scene of the encounter. The Santa Rita mountains, near Tubac, exhibit indications of having been a rich mining locality, and several specimens of gold bearing rock were obtained.

Fifty miles from Tubac is found one of the richest gold deposits in Sonora. Tobacco flourishes well at Tubac, and was observed growing from the stalks of the preceding year. Its cultivation is prohibited further in the interior. Sugar and cotton are also raised in this district, and the land is well provided with trees of the cottonwood and walnut. Through the entire distance from Tubac to Altar, one hundred and thirty miles, ranches, haciendas and pueblos, are found, but these are mostly depopulated as far as Boosana, sixty miles from Tubac. Wheat fields, pomegranate, and fig groves are observed in abundance along the whole route from Boosana to Altar, although in this quarter, as throughout the entire frontier of Sonora, the inhabitants are at the mercy of the Indians, and have to submit to any exaction they may impose, glad to escape from their barbarous masters with life. The largest settlement between Altar and Tubac is the old Mission, Tubatami, twenty-five miles from Boosana.

From Altar to Lobos, on the Gulf of California, in latitude 31° 15', as determined by Mr. Spence, who examined this point on the coast, the distance is forty-five miles. The river Altar here empties in the gulf, and along its entire length presents a succession of ranches and a level country described as surpassingly beautiful, abounding in oranges, figs, and other tropical fruits, the climate as delightful as any in the world. The port of Lobos has been known but a short time. It is a most excellent harbor, and the surrounding land fertile and productive. Should the route for the southern road be extended to the Gulf of California, this will probably be its terminus, unless a further acquisition of territory should include Guaymas. Col. Gray, as we understand, regards favorably the situation of Pinacate, on Adair bay, that being nearer the direct line of the 32d parallel, but Lobos has unquestionable advantages as a harbor. A small settlement is formed at Lobos containing a few houses. Occasionally a vessel anchors there to smuggle goods into the country.

From Tucson to the Gulf of California, the route examined by Colonel Gray's parties, of which hitherto no authentic or reliable accout has been given to the world, proves to be one of surpassing excellence for a railroad, very level, and rich in mineral as well as agricultural resources. Its beauty to the eye and delicious climate are enthusiastically described. Concerning this region of country, as well as that lying to the eastward between Santa Cruz and El Paso, there has heretofore existed the greatest misapprehension; and more recently, since the discussion in the press arising from the treaty negotiations with Mexico, it has been characterized very often as a desolate, barren waste, and utterly worthless. As far as the Santa Cruz Valley was concerned, and the country about the head quarters of the Yaqui river this sweeping disparagement and denunciation were easily refuted by facts which have been already before the public.—From the additional testimony which will be received in an official form, in the forthcoming reports of Col. Gray, and Lieutenants Stoneman and Park, we believe that even the bitterness of sectionalists will yield to a conviction that whatever other arguments they may urge against the extension of our territorial limits as proposed by the treaty negotiations with Mexico, that the assertion of the country itself being sterile and valueless, will not be again urged.

The extent of country between the Rio Grande and the Colorado river, lying along and adjoining the parallel of 32° is not inferior to the country of Los Angelos, the best agricultural district in the state, apart from the vast mineral wealth it is known to contain. The additional territory which is acquired by the new treaty with Mexico, if it includes the section of country we have alluded to, is worth ten times what is paid for it by the United States, apart from the consideration that it furnishes the only perfectly feasible route yet scientifically ascertained for a Pacific Railroad. The time is not distant when a state destined to rival California in her heretofore unprecedented growth, will be inagurated below our present southern border, and only the most earnest efforts of all interested in the progress of San Francisco and California, will secure within this state the first or even a cotemporaneous Pacific railroad depot within our borders. Six months ago we told the truth about the inducements which were offered for a Pacific railroad terminus at Guaymas or some other port to the northward, on the Gulf of California, and the truth of the suggestions then made as incentives to greater efforts on the part of the people of California, has been confirmed by what is now transpiring.

MAYSVILLE & LEXINGTON RAILROAD.

The adjourned meeting of the citizens of Maysville and Mason county, to ascertain the condition of this road, and consider the best means of finishing it, was held at Maysville on Saturday evening, July 29th. The committee appointed to seek information from the directors made a report, by which it appeared that the total amount of stock subscribed is $995,350. Probable amount of additional stock accruing from tax certificates and interest, $184,569. Total amount of cash realized, $1,347,557 33. Balance due from all sources, $52,505 36; of which $25,623 is considered available. Total indebtedness, $887,313 51. Total amount expended for all purposes, $1,606,267 37. Estimated amount to finish graduation of road, $202,116 32.—To complete and stock road to Paris, $715,266 32. The directors express the belief, however, that if half the latter sum can be raised, the road can be gradually worked to completion.

The committee infer from the communications of the directors, that they have despaired of the completion of the road so as to avoid a total sacrifice of the stock, and that they think the sale and transfer of the road to other parties is the only feasible plan from which its completion can be expected.

HICKMAN & OBION RAILROAD.

Mr. Roulhac, the Secretary of the Hickman and Obion Railroad Company, gives us the following information in regard to the affairs of this company:

Estimated cost of the local work	$50,000
Ironing, equipping, etc	150,000
Total estimated cost	$200,000
To meet this they have Individual subscriptions	$60,000
Stock taken by Contractors to be paid in work	20,000
Total available funds	$80,000

Of the local work there is about one-third completed and paid for.

It will be seen from the above statement that there is a deficit in the amount necessary to complete the road of $120,000. To meet which, they propose that the city of Hickman subscribe $50,000; leaving $70,000 still unprovided for, but which the company have assurances shall be forthcoming so soon as the city or individuals, take fifty thousand dollars stock, which they now propose that the city shall take.—*Hickman Times.*

MEMPHIS & LITTLE ROCK RAILROAD.

In a recent letter to the editor of the *Little Rock Gazette*, from a highly respectable gentleman residing in Memphis, the following passage occurs in regard to the Memphis and Little Rock Railroad:

"This road has been put under contract, upon such terms as will insure its construction. Messrs. John H. Bradley and Wm. B. Ford, of New York, are old and highly responsible railroad contractors, and they have taken hold of the Memphis and Little Rock Railroad with a determination to carry it thro'. I think there cannot be a doubt but this road will receive the most general favor by the citizens of Arkansas."

In the present contract, with Messrs. Bradley & Ford, there is one objection, which the enemies of the road have made into a great bugbear, avoided. It has always been said that the depot at the eastern terminus of this road would not be in the state of Arkansas, but in Memphis. In the contract just alluded to, it is stipulated that the eastern terminus of the road and the depot shall be on the west bank of the Mississippi river, opposite Memphis in the state of Arkansas.

The prospect now is, that the roads from Memphis and Helena will be built, unting at White river, and running westwardly.

*Unknown or partly estimated.

The total number of miles of railway in operation in this state is 553 miles. The above table gives the whole length of the road owned by different corporations, some portions of which are in other states. The number of miles of road in process of construction is 136 miles; and the whole number of miles in operation and in construction located in the state of Connecticut is 644 miles.

One person has been killed for every 104,602 miles run by trains; one person has been killed for every 67,132 miles run by passenger trains; one person has been killed for every 160,124 passengers carried in the cars; one person has been killed for every 4,732,000 passengers carried one mile; and only one passenger killed out of 94,640,000 passengers carried one mile.

VERMONT CENTRAL RAILROAD.—This company is in a queer condition. The President has given up his "trust;" three out of the seven Directors have resigned, and the remaining four will not assemble to do business, and the new treasurer has left his place.—The company has neither head nor members and must go on by itself, if it go on at all. Some of the stockholders lately held a meeting, and voted a dividend of three dollars a share on the over-issued stock, *payable when in funds*, and then adjourned to dinner.

CHICAGO & MISSISSIPPI RAILROAD.—Edward Keating, Esq., who has been so long connected with this road has resigned the office of Superintendent, in consequence of ill health. He is succeeded by Richard P. Morgan, Esq., who is highly spoken of.

COST AND CONSUMPTION OF GAS IN THE UNITED STATES.

An interesting report by the Cincinnati Gas Co., shows the price at which gas is supplied by the companies of various cities and towns in the United States. From this summary it would appear that at Pittsburgh and and Philadelphia gas is furnished much cheaper than at other places. We enumerate here the price of gas at thirty-four different towns, with the length of street mains, and the quantity of gas consumed annually:—

Cities.	Price per 1,000 feet.	Length of street mains.	Cubic feet sold per annum.
Philadelphia	$1 90	120 miles	250,000
Pittsburgh	1 90	14⅝ "	33,447
Boston	2 50	50 "	135,000
Evansville, Ind.	3 00	3⅛ "	2,160
New York— (Manhattan Co.)	3 00	170 "	309,000
St, Louis, Mo.	3 00	34¼ "	43,000
Wheeling, Va.	3 00	5 "	.....
Providence, R. I.	3 00	20 "	27,722
Wilmington, Del.	3 00	8½ "	8,030
Baltimore, Md.	3 00	40 "	65,946
Cincinnati, O.	3 00	30 "	.....
Cleveland	3 00	7 "	15,000
Columbus	3 00	5 "	8,117
Indianapolis, Ind.	3 50	3 "	2,880
New Albany	3 50	4,000 feet.	2,000
Zanesville, O.	3 50	19,000 "	1,260
Madison, Ind.	3 50	20,000 "	5,000

At New York there is another company, so that the whole quantity consumed is not shown by the above table. At Pittsburgh and St. Louis, coal is worth about 7 a 10 cents per bushel, Cincinnati, 10 a 15 cent., with a tendency, at all the places enumerated, to a rise in the market price. At Pittsburgh, Pa.; Madison, Ind.; and Wheeling, Va., the gas works are owned in part by the cities; at Philadelphia they are owned entirely by the city.

INCREASED BANKING CAPITAL.

The late Legislature of Connecticut increased the banking capital of that state, one million one hundred and thirty-three thousand dollars, as follows:

NEW BANKS.

Name and Location.	Capital.
Elm City, New Haven	$500,000
Tradesmen's, do	500,000
Mattatuck, Waterbury	500,000
Home, West Meriden	300,000
Stafford, Stafford	300,000

CAPITAL OF OLD BANKS INCREASED.

Winsted, West Winsted	$200,000
Thames, Norwich	200,000
Danbury, Danbury	125,000
Bridgeport, Bridgeport	100,000
Fairfield County, Norwalk	100,000
North America, Seymour	100,000
Deep River, Deep River	75,000
Meriden, Meriden	50,000
Stamford, Stamford	45,000
Windham County, Brooklyn	38,000
	$3.133,000

The Hartford *Times* says that the above increase has been made upon the old plan, permitting an issue of 50 per cent. over the paid in capital, and in direct defiance and disregard of the Free Banking law of the state, in existence at the time of the passage of the law authorizing the above named increase.

EVANSVILLE & CRAWFORDSVILLE RAILROAD. Hon. Samuel Hall, the President of this company has notified the stockholders that he will not be a candidate for re-election at the October meeting of the Board.

Communications.

DUTIES ON RAILROAD IRON SHOULD NOT BE REMITTED.

[We most cheerfully give place to the following article on the Iron Manufacture, from Professor Mather. A subject of so much importance should be thoroughly considered.—Most assuredly *we* have no desire to injure the iron manufacture, whose development is all important to the country. The ground we take is, that the *present duty* on railroad iron, has benefitted *neither the manufacturer, the government, or the people*, but has injured the railway companies by being a heavy tax on their business. We shall have another article on this subject, and shall be glad to receive any communications containing information on this point.]

E. D. Mansfield, Esq:

My Dear Sir:—Your views of the remission of the duties on railroad iron, and the effects of the tariff on our railroad system, and on the completion of our roads are doubtless correct. The question with statesmen who make laws to regulate commercial exchanges is, or should be, *What under all the circumstances will be for the best interests of the country?*

As regards railroad bars, large quantities are and will be required for many years, not only for building new roads and completing those in progress, but keeping them all in repair. The remission of duties would be of present advantage to the railroad interests, but it is believed that it would result in breaking down and closing all the railroad mills in our country, and prevent that rapid development of the iron business, and of the great extension of the manufacture of railroad iron now in its incipient stage in the United States, and which is so important, that it should be *fostered* even at a heavy temporary sacrifice. The writer feels a deep and abiding interest both in the completion of the roads in progress, in the railroad-mill establishments, and in the extension of the manufacture of railroad iron. Tho resources in materials for this manufacture are exhaustless in many favored localities. Iron masters are now convinced that iron can be made easily and cheaply from stone-coal, and from iron ore that they have been accustomed to reject from their charcoal furnaces. Several coal furnaces are in operation in Ohio, and many of them in Pennsylvania, and many more are building, intended to work with stone-coal. This mode of manufacture is the only one that can compete with the Welsh and Scottish iron, and it is only recently that it can be said to have overcome the prejudices of those engaged in the iron manufacture. The large profits realized on pig-iron, the demand for which fully equals the production in Ohio, the relatively smaller profits on railroad bars, and the lack of sufficient capital seeking investment in the iron business, have prevented a rapid extension of the railroad iron manufacture in Ohio, where greater facilities for cheap manufacture exist than in any other part of the United States, or probably in the world.

Notwithstanding these causes, capital is already invested to the extent of $10,000,000 in railroad mills and furnaces for making railroad bars, in six of the States, viz: Pennsylvania, Ohio, Massachusetts, Virginia, Maryland and New Jersey. The estimated production of these works for 1854, in the Philadelphia Bulletin and in the Railroad Record, is 160,000 tons; but in that estimate only one mill in Ohio was named, viz: that of Portsmouth—5,000 tons, while there are railroad mills at Hanging Rock and Ironton, and probably at other points in Ohio. These iron works give employment to 18,500 men, and directly support a population, (their families) of 92,500, which consume provisions at $50 per head, per annum—$4,725,000. The wages of 18,500 men at $300 per annum, are $5,550,000.

The produce of this labor, 160,000 tons of iron railroad bars, at $60 per ton, is $9,600,000. This is all derived from the labor, skill and capital applied to begin the developement of our dormant mineral resources; and it is all distributed in the community, instead of being sent out of the conntry, to pay for foreign labor and production. The production of railroad iron in the United States has been and still is small, compared with the consumption; but we have all the facilities for the manufacture and transportation of railroad iron. Iron ore capable of producing 5,000 to 10,000, tons of iron to the acre, and coal and limestone to make it, occupies broad areas in the iron belt, which is traversed by the Ohio river, its tributaries, and by several railroads, opening communications and facilities for transportation in every direction.

Capital only is now wanted, and a feeling of confidence in our law-makers, that they will pursue such a course of policy that capital invested shall not be destroyed by their vascilating measures, to give such a development to the iron business as has not been thought of, except by the few. We can and ought to be free from the importations of foreign iron, and in a few years we will be, if Congress continues to protect the iron manufacturer.

The extension of iron manufacture thus far, has been almost entirely from the surplus profits of iron masters in Ohio and Kentucky, and perhaps mostly so in Pennsylvania.

Welsh iron masters need only to appreciate fully the advantages for making iron with stone coal, in southern Ohio, to transfer some of their manufacturing establishments for rail bars, to that district, already swarming with a Welsh population which has settled in a coal and iron region, like their native hills.

Although it would be a benefit to the railroad corporations temporarily, to abolish the duties on railroad bars, it is deemed a short sighted and temporizing policy, that would, by so doing, prostrate all the enterprise already engaged in the manufacture of railroad iron in the United States; and, still worse, repress for many years the development of that branch of the iron business in Ohio and Pennsylvania, Kentucky and Virginia, where the facilities for cheap production, and for transportation in every direction, are unrivaled. How long shall we bring railroad bars 4,000, miles, to lay down across the iron ore beds, and coal beds, where every facility exists to make them as cheaply as in Wales?

Yours truly,

W. W. MATHER.

FRENCH RAILROADS.

A foreign correspondent of the Savannah *Republican* speaks as follows of the railroads in France:—"It would be an injustice to France, did I not make some mention of her railroads. Without exception, they are the best I have ever seen, and approach as near to perfection as anything I can conceive.—Though few in number, compared with those of even younger and smaller countries, they surpass them in completeness, solidity, strength and beauty of structure. The masonry upon them is most perfect. Nothing can surpass it in strength and beauty. The bridges over the roads are all of stone, arched. The viaducts over the valleys, the tunnels under mountains, the walls upon the sides of deep cuts, are all of solid masonry. This is the less to be wondered at, inasmuch as the work, though done at the expense of private companies, is superintended by the engineers of a government which permits nothing to be half done. The Government will not allow a road to commence business until its own engineers have examined and accepted the road. We were especially struck with the splendid workmanship upon a tunnel through which we passed before reaching Dijon. It is nearly three miles in length. No ray of light penetrates it, except what streams, for a short distance, through the entrances. Our railway contractors and builders might gain much valuable information by a careful inspection of the roads, and the railway system of France. The banks at the sides of the road are sodded, and their beautiful green is a pleasant sight to the eye when the surrounding scenery is shut out. The line of the roads is covered with broken stone, so that there was no dust to annoy us, although there has been no rain for some days previous. You must not think my language too strong, for I can assure you that the roads in France deserve all and more than all, that I have written.

THE DAYTON SHORT LINE RAILROAD.

The work to complete the tunnel through which this road penetrates the hills north of Cincinnati, was re-let on Wednesday the 9th, to Gen. Dunham, one of the original contractors, and Wm. C. Davis, of this city.—The firm is a strong one, uniting pecuniary means, experience, and general business capacity of the highest order.

The rate at which the work is taken by these gentleman, is an advance upon the former contract. It is to be prosecuted steadily to completion, the contractors agreeing to oporate just as large a force as the means furnished by the Company will sustain—say from five thousand to fifty thousand dollars per month, as funds may come in.

The tunnel was originally estimated to cost less than half a million. About $360,000 nave already been expended, and two-thirds of the work remain to be done. It will cost, when completed, fully a million of dollars.

The company commenced operations with individual subscriptions amounting to a million of dollars. Of this sum about $400,000 have been collected and applied to the road. mostly at the tunnel. It is confidently belived that by the time the $600,000 remaining due on subscriptions are collected, and judiciously expended, the enterprise will be in such a shape that, with an improved condition of the money market, funds can be procured to put it through.

Mr. Beckel, whose contract covers all the road north of the tunnel to Dayton, has been directed to push his branch of the work as rapidly as the company mav be able to furnish "material aid." The road will not be completed this year—probably not next year—but it will be made, and when made will be not only a lasting monument to enterprise, but a paying investm ent of capital.—*Dayton Gazette.*

Memphis, Clarksville and Louisville Railroad.—At a meeting of the Board of Directors of the Memphis, Clarksville and Louisville Railroad Company, in the town of Clarksville, on the 8th day of July, 1854, the following resolution were adopted:

Whereas, the Memphis, Clarksville and Louisville Railroad Company has a large amount of available resources, in the shape of solvent subscriptions and county bonds, pledged to build that portion of said road lying between the Kentucky State line and the Tennessee river, a section of the road which occupies a middle position between Memphis and the important points on the Ohio river; and whereas the President and Directors of that portion of said road desire to form connections with other railroads leading north and south from the Kentucky State line and from the Tennessee river, and as correspondence between the Presidents of the respective roads above indicated, leads to no very practical results: Therefore,

Resolved, That the President of this Company be authorized to invite a conference of the Presidents of the Louisville and Nashville Railroad Company, the Memphis and Ohio Railroad Company, the Mississippi Central and Tennessee Railroad Company, the Lexington and Danville Railroad Company, and the Presidents of any other railroads interested in the completion of said first mentioned road, said meeting to be at Clarksville, or some other point that may be agreed upon, at as early a day as practicable.

T. W. WISDOM, Sec'y.

Erie & Ontario Railroad.—We learn from the Niagara *Mail*, of the 26th ultimo, that the books for the extension of the Railroad from the Welland River to Lake Erie, as authorized by charter, were opened at the Clifton House, on Saturday last, and nearly two-thirds of the required capital were subscribed upon the spot. A survey of that portion of the extension lying between Chippewa and Dunnville has been ordered and if the municipalities most deeply interested embark in the enterprise with a becoming degree of spirit, next summer, very early will witness its completion, and thus the Buffalo and Goderich railroad will be furnishsd with a Lake Ontario terminus; and at the same time will be completed a very important portion of that Lake Shore road, which will before long connect the far West through the "Southern Michigan."

Cincinnati, Harrison & Indianapolis R. R.—At a regular meeting of the stockholders of the Cincinnati, Harrison and Indianapolis Straight Line Railroad Company, held on the 10th of August, the following gentlemen were elected Directors for the ensuing year:

E. M. Gregory, Chas. Reemelin, T. W. Faber, R. H. Pinny, Robert Boal, J. H. Gerard John M. Makin.

The board of Directors organized by electing E. M. Gregory, President; Chas. Reemelin General Agent; T. W. Faber, Secretary; John M. Makin, Treasurer.

It is now certain that the Cheviot Summit can be overcome without a tunnel. This reduces the cost some two hundred thousand dollars. The grade will not have to be as high as that on portions of the Baltimore and Ohio Railroad.

Portage City & Lake Superior R. R.—A meeting of the board of commissioners of the Portage City and Lake Superior Railroad Company was held at Madison, on the first day of this month, and the following named gentlemen were elected officers of said board, viz:

Walter D. McIndoe, President; A. C. Ketchum, Secretary; N. H. Wood, Treasurer.

Books for the subscription of stock were opened, and a liberal amount of stock subscribed. The books were ordered to be continued open at Madison, Portage City, Steven's Point, and Wausau.

A preliminary survey of the route was ordered to be made from Portage City to Wausau, to be commenced as soon as practicable. —*Wis. State Journal.*

New Railroad in Arkansas.—A Convention was lately held at Pine Bluff, Ark., which very earnestly endorsed the project of building a railroad from Little Rock to Napoleon, and recommended it as the Eastern branch of the Cairo and Fulton road.

Madison & Swan Lake Railroad.—The stockholders of the Madison and Swan Lake Railroad Company, held an election in this place, at the office of S. Mills, Esq., on the 1st day of this month, and elected the following board of directors:

L. J. Farewell, S. Mills, F. G. Tibbits, M. B. Van Slyke, C. J. Pettibone, H. S. Haskell, M. B. Munn, N. H. Wood, W. D. McIndoe.

At a subsequent meeting of the directors, held on the same day, L. J. Farewell was elected President; A. C. Ingham, Secretary; and Simeon Mills, Treasurer.

We learn that it is the intention of the company to make a survey of the route from this place to Portage City at once.—*Wis. State Journal.*

TO CONTRACTORS.

Bellefontaine & Delaware Railroad.—We perceive that this company have advertised for proposals for constructing a portion of their road, between Bellefontaine and Marysville. The securities offered will no doubt be found ample and satisfactory. See advertisement in our columns.

Ashtabula & New Lisbon Railroad.—In our advertising columns will be found proposals to contractors to undertake this line of road. This is one of the best opportunities offering, and the means of payment are ample; no small desiderata at this crisis. See advertising columns.

Engineering, Draughting, etc.—At this epoch of railroad building Engineering talent is in great demand, and many young men are desirous of fitting themselves for the exercise of the profession of engineers; to such we would commend "Nugent's College," Public Square, Cleveland, Ohio. C. E. Nugent, Principal.

Mr. Nugent offers strong testimonials of efficiency and capability, and would doubtless give ample satisfaction to all who might call his services into requisition. See advertisement.

Railroad Materials, Machinery, etc.—Messrs. Sellers & Dana have opened a large depot in our city for the supply of all materials, from a jack-screw to a locomotive, in use upon, or in the construction of a railroad, and are prepared to furnish every article at manufacturers prices.

Cincinnati has now become the center for supplies for the West, and such a depot has become necessary. Messrs. Sellers & Dana are peculiarly fitted for the control of such a business and we commend them to the public.

Public Documents.—We are under obligations to Hon. S. P. Chase for valuable Public Documents.

MONETARY.

At the East the Money Market remains without change, except a slight increase in the rates of interest. The ruling rates at the close of the week were 9@10 per cent for first class business paper. Less known at 1 per cent. per month, while Railroad paper is difficult of placement at rates from 15 to 18 per cent. On call loans, money was easy at 6@7 per cent., where the securities were undoubted.

Foreign Exchange rates at 108¾ to 109½.

The Stock Market continues dull and heavy, though some of the better classes of stocks are in demand at slightly advanced rates. Thus Erie closed heavily at 45@45½ on the 9th, and reached 49 on the 11th. This improvement was consequent upon the announcement that the liabilities of the company were provided for up to February next.

It is the prevalent opinion among those versed in the affairs of Wall street, that the worst of the depression has passed, and that stocks have reached the bottom. Due care, henceforward, will keep the market in a healthy state, and bring about a return of confidence, so essential to profitable business transactions.

The sales of stocks have been limited, though the Exchange Board reports show a fair amount.

The following sales, among others, were made by A. H. Nicolay, 10th inst:

$29,000	Great West. Ill's, 10s '68	$75 00
5,000	Lyons, Iowa, Central, 7s. '73	2 50
5,000	" " " "	2 62½
5,000	" " " "	3 00
945	" " " Coupons	2 00
6,000	Chicago and Miss., 2d mor. 7s. '74,	63 50
5,000	" " " "	60 50
5,000	Buffalo & Corning, 7s. '67	54 00
5,000	" " "	53 00

All the above with interest.

20	shares Dell., Lack & West. R. R.,	93 00
20	" O. L. & T. Co.	74 75

As to monetary affairs at the West, we cannot give a better idea than to copy the weekly circular of I. O. Davis, Esq., of our city, ending last evening. The circular says:

The Money Market at this time presents every appearance of depression and stringency, though such is not the case in fact. Money is abundant, and easily to be had on undoubted security; it is only second class securities that feel the pressure. This seeming anamoly is easily explained, by the want of confidence on the part of capitalists,—caused to a great extent by the discovery of the recent stock fraud, and the failure of several heavy Eastern firms—which creates a disinclination to operate at present, where there is the least doubt.

We quote street rates as follows:

First class short mercantile paper easy at 8@12 ℔ ct.
Less known " " diffi'lt at 12@18 ℔ ct.
R. R. securities are taken slowly at 1½@2½ ℔ ct. per month, according to the names of the parties on the bills, and the class of stock offered as security.

Eastern exchange has been very unsettled, varying from ¼ ℔ cent. premium, (selling, in the early part of the week to 1¼ premium (selling) on Tuesday last.—We quote present rates at 1 ℔ cent. premium. This unsettled state of exchange is caused by the disturbance in the currency in use in our city; all of our Banks having at one time refused to receive upon deposit any of the issues of the Indiana Free Banks. On Tuesday last, at a meeting of the Bankers and Brokers of the city, it was resolved to receive as usual bills of the denomination of 6 s and upward, of all of these Banks except the State Stock Bank of Peru, and the Rensselear Bank at Rensselear. The Ohio Life and Trust Co. has refused to receive any of the issues of these free Banks. Arrangements are being made to devise a plan to gradually drive out of circulation here, all the issues of other States of less denomination than $10, preparatory to the operation of the new Bank law, which goes into force Oct. 1st, proximo. Small bills of the Free Banks are now received by the Brokers at 1 ℔ cent. discount.

The state of the Stock Market is depressed and dull from the causes mentioned above; notwithstanding, there is a disposition to invest in first class stocks at present prices. We have received and executed order from the East for permanent investment, to a considerable amount, for one of our leading railroad stocks.

Miscellaneous.

A THRILLING RAILWAY SKETCH.

"Sentinel," of the *N. Y. Courier & Enquirer*, relates the following railroad story in a masterly manner:

Some time since, upon one of the best of our roads—a road in which all attention is given to the comfort and safety of the passengers—one of the most rapid of the trains left a city, at its regular time, and all having care of the train were quite satisfied that all the movement was ordinary and right. There was no peculiar jar—no sudden change of sound. The wheels went round rapidly as a racer could require, and the systematic and well understood blow of the wheel on the rail, succeeded by the roll when the continuous rail was reached, assured every body that all was right.

A short time after the train had left, one of the workmen employed at the station, came to the Superintendent, bringing with him a piece of a long bolt, which he said he had just found on the track- It was, he thought, something appertaining to the cars. The Superintendent, with a thrill of feeling, recognized it as the *king bolt* of one of the carriages. The train was too far gone, indeed, as several minutes had elapsed—gone far beyond recall or reach. These express driving wheels devour distance, so that voice is but a mockery, and pursuit an impossibility. He kept cool, though every nerve thrilled. He saw at a glance that it was an accident, the occurrence of which it was utterly impossible for the conductor to ascertain; and not being of the engine, there would be nothing to induce the engineer to close his throttle valve. The only hope was, *that the car by its weight might stay on the track.* He took his course in prompt decision. The triumphs of modern art, by the blessing of heaven, have placed an agency in advance of the locomotive.

He went to the telegraph, and this was his message. It was a calm one, and not one of impulse or dismay. "*Examine* the trucks on the express train, and see if all is right."—He had thus far done all he could. In the meantime, on that train, the pleasant conversation—the absorbed reading—the glance at scenery—the recollection of a charming hour passed away—or the hope of a glad welcome,—all the incidents that mark every transit of intelligent travelers, was in occurrence.—There were those who could sleep—though quantity and quality were disordered and mingled.

By one of those fatalities in telegraphic movement, which brings news of the woful disease to the friend whose return must be immediate—after the last and worst issue has passed—this dispatch of the Superintendent did not reach the first station till the train had passed. But even in this exigency there was a beam of hope. Thus far at least the train had gone safely. When the operator at the first station did receive the message, he comprehended in a moment, the urgent necessity, and the imminent need of haste. Like a man of sense, he pushed the signal on, and to the very first place where the telegraph could be used, he sent the Superintendent's message. In all these hours that officer could not take off his mind the keen anxieties.—There before him was the faithless iron, and he knew that without it every turn of the wheel brought peril. Better success attended the re-issue of the despatch. Long before the hour for the train to arrive, the instructions were read, and the Superintendent had companions in his anxieties. They awaited keenly the minute when the train should be due. It came, as rushing, as tremendous in its speed as ever. First the white steam showed itself over the trees, then the tall, dark smoke stack, with its breastplate, the polished, silver concave of the lantern; then the sharp whistle to the brakemen, and all was accomplished accurately. The train brought up all right, and the hurrying traveler plunged eagerly for his baggage. The conductor, stepping from his train with that quiet customary, business-like movement, found himself at once called by the station men, to keener action. He could not believe that anything was wrong, for, as a fact is declared of greater truth than a theory, the miles run with winged speed in safety, told of complete order and security.

There was a busy scrutiny about and under the train. The order of the Superintendent told that he was in earnest. Men got under the trucks in places where, if the locomotive should take but a breath, they would be crushed; wheels were tried—brakes examined—beams and bumpers overhauled—and nothing seen as defective,—and the despatch that had used the lightning to travel upon seemed as it were—like the fire cry of the Italians in Meslin, when they saw the moon rise—a false alarm. There was one of that examining party not quite satisfied—I wish I felt at liberty to give his name. That faithful, earnest, constant, accurate officer—never absent—never neglectful; he took that one more last look, which seems so often to concentrate success, and discovered that from one of the cars the king bolt was gone!—and he knew by the fact that from the point of starting, the message of warning had been sent, that over all this journey, this car had been kept from destruction by its weight—by a groove. That minute had the value of life that cannot be recalled in it.

If the engineer had seen any unusual object before him—checked his speed—found his way impeded—given on steam again—the quick sudden movement would have, it is most probable, pulled the truck from the car, and written memories in the histories of that day. But so smoothly—so easily—with such steady tread—that engine moved—that in this unknown danger, its course was as safe as if all strength of iron had encompassed it—Heaven changes that dread word danger by its mercies.

When the Superintendent heard that his train had reached its destination safely, and that his message was yet in time, for the remedy—the remainder of that day he wore a smiling and a gentle look. The compressed lip could let the breath come free again.

FORT WAYNE & CHICAGO RAILROAD.—The Fort Wayne and Chicago road is to be finished by sections. The Directors have concentrated their forces on the eastern end. The first section will be put in operation by the first of November next; and as all the iron has been purchased, and a large portion of the work on the entire line has been done already, the managers of the road are confident that the different sections from Fort Wayne to Chicago will be done early next year.

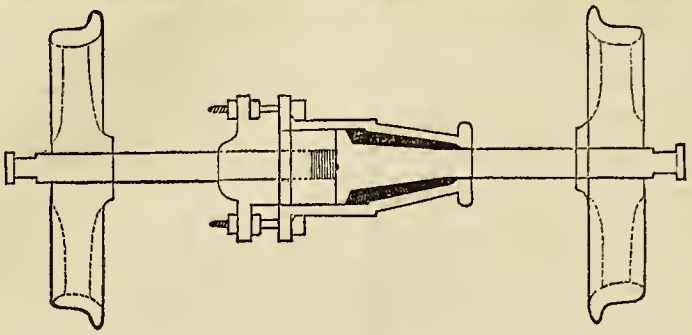
NOTICE TO CONTRACTORS.

SEALED proposals will be received at the office of the Bellefontaine & Deleware Railroad Company, in Bellefontaine, Ohio, until 12 o'clock, M., August 25, 1854, for the clearing, grubbing, grading, bridging and masonry of the unfinished part (being about 10 miles) of Bellefontaine & Delaware Railroad. Commencing at a point on the road about three miles southeast of Bellefontaine, and terminating at the depot of the S. Mt. V. & Pittsburgh Railroad, at Marysville, Union county, Ohio. The map and profiles, together with the plans and specifications, will be ready for inspection at the office after the 10th inst.

Contractors are particularly requested to examine the real estate belonging to the Company; some of which, together with capital stock, they are invited to take in part payment for the work.

The Company reserves to itself the right to reject any or all propositions that are deemed unreasonable.



C. W. A. ALLISON. President.
Attest: S. J. CREW, Sec'y. au17--2t.

OFFICE Cincinnati, Hamilton & Dayton Railroad.—Cincinnati, August 8th, 1854.—The Board of Directors of this Company have this day declared a dividend of five per cent., out of the net earnings of the Company, for the six months ending 31st July, payable in scrip bearing seven per cent. interest, redeemable in three years. The scrip will be delivered on and after 1st September, to the Stockholders registered in Cincinnati, on application at the office of the Company, and to those registered in New York, at the office of the Ohio Life Insurance and Trust Company, in that city. The transfer books will be closed for ten days from this date. FRANK. S. BOND, Sec'y.

W. W. MATHER,
Mineral Engineer and Geologist,
COLUMBUS, O.

WILL make Surveys, Examinations and Reports on the mineral resources that can be made available by railroad or water transportation. [au.17

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it can be refilled, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies now that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

NOTICE TO CONTRACTORS.

Ashtabula and New Lisbon Railroad.

ON and after the 5th of August, 1854, proposals will be received at the Company's Office in Ashtabula, for the Graduation, Masonry and Bridging of about 36 miles of the Northern Division of said road, extending from Ashtabula Harbor, south, to Bristol, in Trumbull county.

The work will be divided into sections of about one mile each. Maps, profiles, plans, specifications, &c., will be ready and open at the office in this place, from August 15th, and until September 1st.

Contractors are invited to propose for the whole work. The work will declared off as soon after the 1st day of September next, as proposals shall be received and approved.

To Railroad Contractors, Quarry Men, &c.

THE attention of those interested is called to ASH'S IMPROVED HORSE POWER ROCK DRILL, for Railroad Excavation, Stone Quarrying, Well Boring &c.

This Drill is worked by HORSE POWER, requiring but one horse and one man, to keep it constantly at work, with great ease and velocity, performing 60 strokes per minute. It is cheap of construction and repair. The AUGER weights from 300 to 500 pounds, will drill a perpendicular or inclined hole FOUR INCHES IN DIAMETER, at the rate of from 8 to 16 feet per day in ordinary lime stone. It has drilled 2 feet in one hour.

For rights to use for Counties or States, apply to the Patentee. WILLIAM F. ASH,
May 20, 3* Springfield, Ohio.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agents of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations. This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils,—10 casks, assorted weights now in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Axes—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoeuberger's and Wheeling Nails, now in store.

For sale by TYLER DAVIDSON & CO.,
mr 3 140 and 142 Main street.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALT MORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to

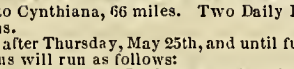
WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Boston, the Eriesson Steamers by Canal to Philadelphia and New York,



And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

J. B. FORD is the Company's Receiving Agent at Wheeling.

E. W. WOODWARD,
Engineer and Superintendent.

☞ The Omnibus Line will call for and deliver passengers to and from the trains to any part of the City.

J. HOWELL, Conductor.

☞ The Company will not be responsible for baggage exceeding $50 in value, unless the same be returned to the Conductor or Agent, and freight paid at the rate of a passage for every $500 in value above that amount.

je. 29

COLUMBUS PIQUA, AND INDIANA RAILROAD.

New route from Columbus, West and from Urbana, East.

On and after Monday September 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between COLUMBUS and URBANA. Will leave Columbus at 4.50 a.m., and 3.30 p.m.—arriving at Urbana at 8.12 a.m., and 6.14 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with the night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morning Cleveland and Zanesville trains can have a few hours at Columbus and leave by the 3.30 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton and Cincinnati.

The 9.15 a.m. train from Urbana connects with the morning train from Cincinnati and Dayton that arrives at Urbana 8.40 a.m.—arriving at Columbus at 12.05 p.m in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Sandusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibuses will connect with the trains at Urbana for the conveyence of passengers to and from Piqua and Greenville over a good Macadamized road.

RAILROAD IRON, LIGHT WEIGHT.

470 TONS, 47 lbs. per yard, good quality and pattern, now lying at New Orleans. For terms, apply to VOSE, PERKINS & CO.,
ap27-tf New York.

WINSLOW'S
PATENT COMPOUND RAIL.

THIS RAIL, which is represented hy the aoove, has now heeu in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing tbe advantages of a

THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are—a saving iu the wear and tear of Machinery—it saves, to a great extent, in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable Being practically a continuous Rail for the entire length of the road, without break at the ends of bars, tbe jarring motion communicated therehy in passing over the common "T" Rail is avoided, as is also its effects upon Cars and Machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at Hanging Rock Iron Works, upon the Ohio River, and at Mt. Savage Iron Works, Maryland. Specimens of the Rail and patterns of the same will be gladly shown, as well as information in relation thereto, given by application to

A. S. WINSLOW, Nos. 9 & 11 West Second Street, bet. Main and Walnut Sts., CINCINNATI.

KENTUCKY LOCOMOTIVE WORKS.

CORNER OF KENTUCKY AND TENTH STS.

LOUISVILLE, KY.

THE Proprietors of the Kentucky Locomotive Works would respectfully inform Railroad Companies and the public generally that, having completed their establishment, they are now prepared to receive and execute orders with fidelity and dispatch.

They will contract for

Locomotives, Passenger, Baggage, Freight, Gravel and Hand Cars,

Of every style and pattern, as well as all kinds of St and Machinery required for railroads.

Particular attention will be paid to repairing, which they have every facility.

They are also prepared to contract on favorable terms for building all kinds of Machine Tools, such as Turning Engines, Lathes, Planers, Drills, Slotting, Spliting, and Shaping Machines, of every variety of pattern.

Having also a large FOUNDRY connected with the establishment, orders for Castings are solicited, and will be filled with promptness.

Car Wheels of any pattern can be furnished or short notice. Double and single plate and Spoke Wheels of all sizes constantly on hand.

☞ Communications or orders must be addressed to

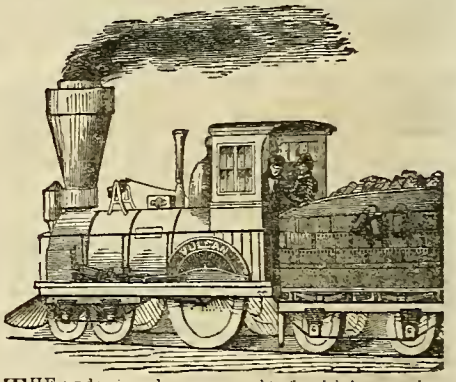
OLMSTED, TENNYS & PECK,
je.8-tf Louisville, Ky.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Reservoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.



The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,
PRINCIPAL AGENT,
May 18.6* Office, No. 167 Broadway, New York.

Cincinnati Locomotive Works!

THE undersigned are prepared to furnish Locomotives equal in efficiency and durability to the best Eastern manufacture. Also, Shaping and Slotting Machines suitable for railroad shops. Also, all kinds of heavy forging and casting done at short notice. Also, bolts for bridges cut with dispatch.

DESCRIPTION OF PLAN.

Fig. 1, of the above cut, represents the foundations, consisting of *Bank* and *Track Walls*, the latter made of cut, the former of hammer-dressed stone, with cut stone coping. The Track is bent of the ordinary T rail, spiked and leaded to the stone track walls. The Center Pier is made of cut stone, with a step for screw and pivot bolted to the same.

Fig. 2, shows the framing.

Fig. 3, is a side view of Main Truss, with the mode of gearing, including the mitre-wheels, iron crank frame, rack and pinion, foundations, pivot wheels and pedestals.

Fig. 4, gives a perspective view of rim, segments, decking, etc.

Fig. 5, is an end view of the main trucks, with pedestals and wheels.

Fig. 6, is a screw for pivot, 6 inches in diameter, working in a steel step through a nut for adjustment.

Fig. 7, shows a cross section of track wall, well, and pedestal.

OUR RAILROAD MAP---NEW EDITION.

We have now ready a new and revised edition of our RAILROAD MAP, containing corrections and additions from reliable sources, making it as reliable as it is possible to make such a map.

We are prepared to print maps for Railroad Companies to illustrate their reports, either from the stone as it now is, or make any alterations to suit parties. Railroad Companies will find this much more economical than getting up maps especially for their roads.

Price of maps as follows:

Plain, sized,	40 cents.
Colored in outline,	50 "
Colored in States,	75 "

A liberal discount where a number are taken.

PROSSER'S PATENT

Agents for Krupp's celebrated Cast Steel for Shafts Railway Axles, Tires, Platers' Rollers, etc.

P. S.—All Tools necessary for the construction or keeping in order of Tubular Boilers.

THOS. PROSSER & SON.

au.17 28 Platt street, New York.

COLUMBUS, PIQUA AND INDIANA RAILROAD.—The Urbana *Gazette* says that the track laying on the Columbus, Piqua and Indiana Road, between Urbana and Piqua, is progressing with commendable rapidity. The iron is down some three or four miles out from Urbana, and more than that distance from Piqua. In a few weeks more the connection between Urbana and Piqua will be made.

RAILROADS:—WHY THEY MUST AND WILL BE BUILT.

It is a conceded fact that the onward progress of the "Great West," in wealth and refinement, has had no parallel since the world began. Where but a few short years since all was wild and uncultivated,—where the native Indian roamed at will—there now stand cities, towns, villages and cultivated farms, all instinct with the hum of busy life, and producing a surplus of agriculture and manufactures almost, if not quite, sufficient to supply the wants of the rest of the Union, if not of the world. This sudden growth and expansion have been the results, more especially, of a few later years—less than a score perhaps—prior to that time, though the progress of improvement was onward, yet was it slow; but when the steamboat and railway furnished facilities for transportation, capital poured into the West, and the prairies and hills yielded their wealth in the form of crops, lead, iron, coal, and the manufactures consequent upon the development of such mineral riches. But the increase of transportation facilities did not keep pace with the increase of surplus productions—other means of getting these products to market had to be sought. Railways had been tried and found to be just the thing that was needed. With the impetuosity of the Yankee character, the construction of railroads was gone into with the determination of meeting the wants of the country. The magical effects of these roads in starting into life villages, and towns along their respective lines, upon leading routes, became evident. New roads sprung up in every direction, beyond the *immediate* (not prospective perhaps) wants of the country; immense amounts of money were locked up in this class of securities; a pressure came upon the financial affairs of the country; heavy frauds were discovered among leading railroad men, and again, with the precipitancy of the American character, all railroad affairs were dropped, and the whole system declared a humbug. The monetary disasters of the country were all attributed to this cause—building too many railroads, and all who held railroad securities hastened to dispose of them, thus causing a panic, as it were, in the market; all became sellers, and of course there were no buyers, except some few more daring than the rest, tempted by the low price, who will eventually reap a rich harvest from their investment.

This, in a few words, is the state of railroad affairs. But can it remain so? That is the question. We say it cannot. The energies of the Great West were never less impaired than now. She is just as capable of producing as ever, indeed, more so; recent developments of additional mineral wealth have added an impetus to her heretofore onward course. If but a year since facilities of transportation were needed, how much more will such facilities be demanded in a year to come?

It is the very nature of railroads to *create* business. The railroads already completed will create as much business as they can afford facilities for within their own immediate influence; towns and cities and sections of country, having any facilities for manufacturing and producing largely, must remain supine, and witness their neighbors carry off the business of the land, while they, for want of railroads must languish and decay. From the past must we judge the future. Is there aught in that past to indicate that the construction of railroads will cease? We think, and feel that there is not. On the contrary every indication is that, after a short delay, in which the public mind shall have become restored to its former equanimity, the building of railroads will be resumed—we do not say to the extent heretofore proposed,—but with more judgment; building main trunk lines, leaving branch and connecting lines to be built as called for by the necessities of the several sections of the country.

We can build roads as well as any other country; we have the talent and engineering skill, and we have the cool headed, calculating business men to conduct their affairs.—And while railroads call for heavy amounts of capital, they make a return therefor unequaled by any other investment. When a road is built through a section of country, we care not whether that road ever pays one cent of interest to its stockholders or not, it will have more than repaid its cost in the increased aggregate, actual value of the land on either side of it. And while thus increasing the value of property they add to the comfort and refinement of the community at large.

Who would willingly go back to the days of stage coaches and Cannestoga waggons? None, we dare say. The railway is the only mode of intercommunication at all up with the spirit of the age. And though their construction may be for a time impeded, yet must it be resumed under brighter and more flourishing auspices. The resources of the country are ample to build them; the business of the country loudly demands them, and they will be built.

Aside and apart from their necessity,—and they have become a necessity,—they are the best permanent investment of the country.—We must not condemn the entire system from the mismanagement of a few companies.—Look at the leading roads of the west. The Mich. Central, Mich. Southern, Galena and Chicago Union, Little Miami, Cincinnati Hamilton and Dayton, and the lines forming the several Eastern and Western connections from Cincinnati,—where can be found better investments?

The cry of "the railroads have caused all

the financial trouble," has rung in our ears some time. We don't believe it. Injudicious expenditures upon some lines may have aided to bring on the crisis; but the main cause must he looked for elsewhere,—where we will not now undertake to say.

In view of what we have thus hastily thrown together,—in the unexpected absence at the last minute of the usual "Leader" from our Senior, we would say to our friends holding railroad securities, "be of good cheer, there is a good time coming" when you will he amply repaid for any reasonable sacrifices, rather than throw away your stock at present prices.

Railroads.

SOUTH-WESTERN INDIANA RAILWAY.

Indianapolis and Vincennes.—At a meeting of the stockholders of the South-Western Railway, held (by adjournment) at Spencer, on the 10th day of August 1854.

John H. Bradley, the President of the company then submitted his report of the proceedings of the company, since its organization, together with a statement of its affairs, and its position and progress, and also the report of Joseph H. Dennis, Esq., the Engineer, of the location, profile and estimates of the line, from Vincennes to Point commerce—all of which were ordered to be published.

The stockholders then proceeded to elect a board of Directors for the ensuing year, when the following persons were unanimously elected, viz:

Samuel Wise, Benjamin F. Thomas, and Dr. John F. Freeland, of Knox county; Franklin B. Cressy and John T. Allison, of Greene county; Isaac Heaton, William M. Franklin, and Hezekiah Wampler of Owen county; and John H. Bradley, of Marion county.

The Board met and organized by electing John H. Bradley President; Jacob P. Chapman, Secretary, H. H. Throop, Treasnrer; and Joseph H. Dennis, Engineer.

It was resolved to divide the line into two divisions. The first division to be from Vincennes to Point Commerce, and the second from Point Commerce to a point near the town of Gosport.

That they proceed to prepare the line for the workmen, and progress with the earth work at, at least, three points, between Point Commerce and Vincennes, and at such points hetween Point Commerce and Gosport, as the stockholders in Owen county shall desire, and as soon as that part of the line shall have heen located, and made ready. That the stockholders in each county shall meet all expenditures therein, to the extent of their means.

☞ A. D. Kingman, Esq., has been elected President of the Hickman and Obion Railroad.

SOUTH CAROLINA, TENNESSEE & KENTUKY RAILROAD COMPANY.

On Monday, the 31st of July, a meeting was had in Kingston by the stockholders of the South Carolina, Tennessee and Kentucky Railroad Company.

It was found that five hundred shares, or fifty thousand dollars had been subscribed as stock to said road, being the amount of stock required by the charter, to be subscribed previous to the organization of the company.—The stockholders then proceeded to the election of a Board of Directors. The following were elected members of the Board:

B. B. Lenoir, W. B. Hope, Sam'l M. Williams, G. W. Yost, G. L. Gillespie, W. A. Lenoir, Jno. W. Winton, R. K. Byrd, W. S. McEwen, Jno. C. Gillespie, N. A. Patterson, of Roane county; Wm. Cross, Anderson county; Jno. G. Hardin, Wm. Gallaher, Knox county; H. H. Stephens, Monroe county.

Monday, the 14th of August, was then selected and appointed as a day for the stockholders to meet in Kingston for the purpose of electing a President, and other officers of the company, and for transacting other important business.

Cincinnati, Hamilton and Dayton Railroad.—The earnings of this road for the past six months were $233,115 33, showing an increase of $33,741 76, over those of the corresponding six months of the previous year. The increase in the number of passengers carried was 33,825.

The net earnings of the road having been applied, during the past six months to permanent improvements, and work upon the second track, makes it necessary for the board either to borrow money at a high rate of interest, to dispose of the bonds of the company at a ruinous sacrifice, or to make a scrip dividend, thus borrowing of the stockholders. The latter course has heen deemed most advisable.

It will be the policy of the Board hereafter to forbear as far as practicable, all new improvements and extensions.

Mississippi and Atlantic Railroad.—Some few days since a paragraph appeared in the *Alton Telegraph* to the effect that the entire force of laborers employed upon the above road had been discharged in consequence of the closeness of the money market. Since then we learn that the statemennt is without foundation. The force of laborers now at work is as large as at any time since the road was commenced, and will be materially increased so soon as the weather becomes cooler. It is the intention of the company to have so much of the road as lies between Illinoistown and Vandalia completed by the time the Illinois Central road reaches the latter point.

ROCK ISLAND BRIDGE OVER THE MISSISSIPPI.

The following particulars of this hridge may be found interesting at this juncture.

The right to build the bridge was granted hy the Legislature of tbe state of Illinois.—The land upon the island belongs to the United States, and the company expected to take so much as they should need for the purposes of their road, under a general act of Congress, passed in 1852, which grants the right of way to railroads, plankroads, etc., through the public lands of the United States, in all cases, except when the lands are actually occupied for custom-houses, navy-yards, forts, or other purposes with which the railroad would interfere.

The company engaged in building the hridge have proceeded with their work upon the island under this law of Congress, sustained hy the advice of the Department of the Interior. A difficulty however, appears likely to arise from the fact tbat the island of Rock Island is now claimed by the War Department as a Military Reservation. During the last war with Great Britain a fort was built on the southern end of the island which was occupied as long as there was any use for it, and was then (several years ago) abandoned to the general land office. Tbe ahandonment was sanctioned first by Mr. Poinsett and afterwards by Mr. Marcy, now Secretary of State, while tbey were Secretaries of War. Hon. Jefferson Davis, the present Secretary of War, for reasons which we are at a loss to understand, not only maintains that the claim of the War Department to the Island excludes the rights of the company under the general law of Congress and the ruling of the land office of the Interior Department; but also refuses to sell or lease on any terms, the fee or the right of way.

For whatever purposes the island may he used, it is difficult to see how the value of the land can be otberwise than benefitted by the construction across it of the railroad which must necessarily be a great highway between the interior of the continent and the East, if not at some future day, a highway from ocean to ocean.

The company feel secure in their rights to proceed with their work, that they would not feel emharrassed by the assertion of this claim on the part of the War Department, and would cheerfully leave the adjudication of the conflicting claims to the decision of the courts of law, in the confidence that the legality of their proceedings would be established—but the case has recently been complicated, as we are informed by the resort of Secretary Davis to the extreme measure of sending an officer to the island, with instructions to remove every person from it, with the exception, as is supposed, of those who occupy a tract

granted by Congress on a preemption claim to Mr. Davenport.

The company have a large force of men in their employ upon the island, and in the belief of the legality of their proceedings, they will not retire except upon compulsion. No troops have yet been ordered to the island, and it will be difficult for the Secretary of War to enforce his demand even should he send all that he can spare for the purpose.—*Boston Daily Atlas.*

GALLIPOLIS, JACKSON & CHILLICOTHE RAILROAD.

We have before us a copy of a report of this company drawn up by Hon. Simeon Nash, in behalf of the Board of Directors, from which we extract as follows:

The charter for this company was granted March 22, 1854, and authorized the construction of a railroad from Gallipolis to Jackson, with the right of continuing the same to a connection with the Marietta and Cincinnati road, so as to open a connection with Chillicothe. The company was organized in July, A. D., 1852, with a subscription of about $75,000. Since that time the company have made no efforts to increase the amount of stock.—It is however, certain that the subscription might be raised to $100,000 and over without much effort.

Soon after the organization of the company, the Directors made arrangements for a survey of the line. Mr. Shaw, of Virginia, was employed, with a sufficient corps to run the line named in the charter. This was done. At the same time a random line was run from Gallipolis by Vinton and the Buckeye Furnace to Hamden; a point on the line of the Marietta and Cincinnati Railroad. It was found that this line gave a connection in thirty-two miles, while the route by Jackson was over forty-one miles. By a connection at Hamden, the line of road would be shortened nine miles, and the distance to Chillicothe not be increased; besides running through the valley of Little Raccoon Creek, the richest iron and coal region in Ohio. The Directors thereupon, became satisfied that the interest of the company required a change of location in the line of the road. An application was therefore made to the General Assembly, in 1852–3, for that purpose, but was not granted, as was understood, because the general law afforded a remedy.

Hence an application was made to the Court of Common Pleas, at its November term, A. D. 1853, for a change of the line, and a change was authorized, empowering the company to construct a road from Gallipolis to Hamden, to a connection with the line of the Marietta and Cincinnati Railroad, with the right also to run a track so as to connect with the line from Virginia, down the Kanawha. This change in the line of the road having been secured, the Directors at once caused it to be surveyed. The survey was made last fall, near the opening of winter, under the charge of Mr. Graves and Mr. Mansfield, and was completed during the month of February.—This survey is on file, and shows that a first rate road can be made with no grades over fifty-two feet, and no curves with a less curvature than three degress, giving a radius of nineteen hundred feet. The estimated cost of such a road is given by the Engineer at about $900,000. This estimate is predicated on the present high prices of iron and labor. At the prices at which Mr. Shaw made his estimate, the cost would not exceed $700,000 or $750,000. The grades of fifty-two feet are only three, and for short distances; in no case exceeding one and a fourth mile. The average grade for any considerable distance is not over twenty-five feet. If the grades for short distances were to be increased, as well as the curvature, the cost of the road might be diminished near $200,000, and neither the grades or curvature be as great as those on the Portsmouth and many other roads. But as this road is to be the connecting link between the Virginia Central road and Ohio and the West it is desirable that it shall be a road of the best character, with grades and curves admitting of great speed, and heavy trains.

Whenever, therefore, Virginia shall decide on pressing through its Central road, a branch will be extended down the Kanawha to the Ohio river and to a junction with our road.—The Virginia Board of Public Works in its last annual report, strongly urged this extension, as being in fact more important to the business of their road, than the branch to Sandy and Kentucky.

We, therefore, consider it as a fixed fact that the Kanawha extension will accompany any appropriation for the Covington and Ohio Railroad; and this done, our road must be made.

The Directors have also consulted with the Directors of the Marietta and Cincinnati Railroad. This company feels a deep interest in the completion of this Virginia connection; so deep, that whenever circumstances will permit, it will lend us its aid in the construction of our road. It would have been done ere this, if it had not been for the stricture in the money market; for the difficulty in raising means to carry on any work of the kind. Whenever this difficulty shall be over, or their road so far completed as to leave the company easy as to its pecuniary wants, it is confidently believed that the Marietta and Cincinnati company will afford us such aid as to secure the speedy completion of this road.

By the charter, ten miles of the road must be ready for running by March, 1857, or the charter will be forfeited. This would be a great loss, as under our present constitution no so favorable charter can be obtained. It is therefore desirable that during the winter an effort should be made to raise stock enough to commence the grading of the first ten miles, if not the first twenty; the latter would carry the road to the coal fields on Little Raccoon. The road strikes the coal and iron fields in twenty-five miles from the river; at a point nearer to the river than any other road. It passes, also, through a fine agricultural and timber region.

Gallipolis presents the cheapest place for manufacturing on the Ohio river. Living is cheaper here than at any other point on the river. Gallia is a better agricultural county than either Scioto, Lawrence, Meigs or Washington; and hence living will always be cheaper. Coal by the railroad can be afforded at five cents, as the distance it must be brought will not exceed twenty-five miles. The health of Gallipolis is also *known* to be better than any other town of any importance on the river. All these circumstances must make Gallipolis just as good, if not a better point for manufacturers of any kind, than either Ironton, Portsmouth, Pomeroy, or that new wonder, Ashland.

There has been two calls made on the stockholders to meet the expenses already incurred; one of five, and one of two and a half per cent. There have been paid in on the calls about four thousand dollars; and there is still due some two thousand dollars. A portion of this may be on subscriptions that will become void by the change made in the line of the road. It was thought best not to sue any one at present, as those paying up are to be allowed interest on their payments as against delinquent and future subscribers. Delinquent subscribers will also be liable for interest on calls not paid up. The cost of collecting such small sums would now equal the sum to be collected.

The cost of the survey, made by Mr. Shaw was $2,556 56; that of the second, made by Messrs. Graves and Mansfield, was $1,381 33. There has also been paid for instruments, books and contingent expenses, the sum of $338 26; making in all, $4,076 19, paid out by the company for the cost of the two surveys and other expenses; a sum lower than any other company have expended for the same amount of labor accomplished.

The Directors will leave no efforts untried on their part, to secure such an end, and it is hoped that those, so deeply interested as the people of this town and county are in the construction of this road, will put forth their whole ability for the accomplishment of the great work so important to the prosperity and growth of our town and county.

Per order of the Directors.

SIMEON NASH.

Gallipolis, July 19, 1854.

CLEVELAND, PAINESVILLE AND ASHTABULA RAILROAD.—At a meeting of the stockholders of this company, held on Tuesday, the 8th ult., the following named gentlemen were unanimously elected to serve as Directors for the ensuing year:

Alfred Kelley, Columbus; Wm. Case, Chas. Hickox, Amasa Stone, Jr., W. D. Beattie, Stillman Witt, T. M. Kelley, Geo. B. Ely, Cleveland; D. R. Paige, Madison; Erastus Case, Auburn, N. Y.

At a subsequent meeting of the Directors, Wm. Case, of Cleveland, was re-elected President; Geo. B. Ely, Secretary, and P. Handy, Treasurer.

An exhibit of the financial condition of the company was presented, which was very satisfactory.

The business of the road for the six months ending June 31st, shows an increase of *twenty-five per cent.* over the same period of last year.

COST OF VARIOUS RAILROADS.—The following is given as the cost per mile of several important railroads:—Western, (Mass.,) $64.250; Boston and Worcester, $70,231; New York and New Haven, $81,614; New Haven and Hartford, $54,355; New York Central, $67,181; Hudson River, $81,812; Camden and Amboy, $66,576; Pennsylvania Central, $54,400; Baltimore and Ohio, $51,292; Michigan Central, $35,657; Cincinnati, Hamilton and Dayton, $44,327, Little Miami, $31,359; Michigan Southern and Northern Indiana Railroads, $23,500; Cleveland and Toledo, $25,000.

MARIETTA AND CINCINNATI RAILROAD.

The following interesting account of the Annual meeting of the Marietta and Cincinnati Railroad we have from the Scioto *Gazette* of the 17th :

The Stockholders of the above Company held their annual meeting for the election of Directors, in this city, on Wednesday. Persons were present from all parts of "the line," and nearly 32,000 shares of stock were represented, without the Pennsylvania Railroad subscription. The following gentlemen were chosen, with marked unanimity, to constitute the new Board, viz :—John Mills, N. L. Wilson, D. Putnam, W. S. Nye, W. P. Cutler, of Washington county ; A. B. Walker, of Athens ; J. Madeira, M. S. Cook, F. Campbell, A. Heigler, of Ross ; Hugh Smart, of Highland ; and A. Taft and S. B. Keys, of Hamilton—the latter two being members of the Hillsborough Board—the two Companies being united.

President Cutler's report to the stockholders was read by the Secretary, the health of Mr. C. not admitting of his attendance. It is a long and highly interesting document, which will, doubtless, be published at length. Some two millions have been invested in the work, buildings and rolling stock of the Company, since its preceding annual report. Thirty-eight miles of the road, between Chillicothe and Blanchester, are *ironed*, and an early completion of the line to a Cincinnati connection promised. Between Charleston, Vinton county, and Marietta, the grading, masonry and bridging are two-thirds done. N. L. Wilson, Esq., the Vice President of the Company, now in London, had succeeded well, in the face of a stringent money market, in disposing of their securities. The work done, though reduced below the President's programme of last August, has, nevertheless, greatly exceeded the amount of any previous year. The President dwells with great weight on the advantages to be secured by this road over all rival lines, by the continuous gauge from Cincinnati to Philadelphia and Baltimore, and the shortness of the line and its favorable gradations. He demonstrates the comanding importance of the route to accommodate the trade and travel of the West and South-West, by its connections at Cincinnati and through Portsmouth with the Kentucky works.

The new Board, we understand, will organize to-day. We have great confidence in the ability and resources of the gentlemen composing it, and of the Company, to put the first class railroad to an early completion.

The Crescent Iron Works, Wheeling, Va.,—We went through these immense works yesterday and found them busy as usual. They have just turned off 320 tons of rails for the Central Ohio Railroad which are ready for delivery; and are now at work on 500 tons for the Galloway Iron Company, Missouri. Their orders for rail are fast coming in notwithstanding the tightness of the money market, and at prices that afford a good profit. Their new engine for the sheet iron rolls has just been started and works admirably. This engine, shaft and bedding are wholly of iron. We learn that the demand for sheet iron is much greater than they can supply, and that one house in St. Louis is prepared to take all the boiler iron they can make. This vast and perfect establishment is regarded alike as the pride of our western works and beyond doubt the most profitable. —*Wheeling Gazette.*

Pacific Railroad—*Southern Route.*—A decree has been issued granting the privilege to Senor Atocha to build a railroad from El Paso to Guaymas, on the Gulf of California.

MINERAL WEALTH OF SOUTH-WEST VIRGINIA.

Some idea of the wealth, especially in salt, of south-western Virginia, may be obtained from the annexed communication addressed to one of the local journals in that region, and subsequently forwarded to the *Mining Magazine.* Public attention has, as yet, hardly been turned to one of the richest mineral districts of our country:—

Abingdon, 15*th May*, 1854.

Sir:—In your last week's paper, a writer is made to say, the people of the United States are supplied with salt from the Virginia Salines of Washington and Smyth counties.—Doubtless the intelligent writer designed only to assert that the great fossil salt mines of those counties are capable, perhaps forever, of yielding salt sufficient for all the citizens of the United States. *That writer* knows that the New York and Kanawha salines yearly supply eight millions of bushels of salt, and other brines of our coast, and the interior furnish near four millions more, to say nothing of the twelve millions of bushels imported yearly from foreign countries for our American population. Including salt exported in provisions or otherwise, and the increasing amounts given to live stock, and consumed for agricultural manures, the use of salt is now about fifty or fifty-two pounds average *per capitum*, throughout the United States. A second "writer" in your paper justly states the yearly demand on these salines is, of late, about four hundred thousand bushels per annum.

The home price has recently risen from sixteen or twenty cents to fifty cents per bushel of fifty pounds; the proceeds paying $33,000 yearly rents and all current charges, besides handsome dividends to the business.

By the Holston and Tennessee rivers, one hundred thousand bushels yearly will continue to be shipped to the counties of Northern Alabama, and also one hundred thousand bushels will be sent out to be sold on commission for the works, within a district or line encircling Saltville one hundred miles on every side. Also, at this same district, consumers would buy and take in their own modes of conveyance about two hundred thousand bushels, if sold at 33⅓ cents per bushel at Saltville, as unpacked salt.

When the line of railroad is finished next year from Lynchburg to Huntsville and Florence, Alabama, it is also certain that if the freight be as promised—*two cents per ton of two thousand pounds* for the articles of salt and gypsum—there will yearly be sent four hundred thousand bushels of salt eastward of the Allegheny summit, and four hundred thousand bushels will pass to lower East Tennessee, parts of Middle Tennessee and Georgia, in addition; making one million two hundred thousand bushels of salt sales from this quarter. This gross amount of thirty thousand tons per annum will also increase yearly, owing to the superiority of this salt over all other salt from any quarter of the world.

200,000 bushels delivered to consumers at the works, at 33 1 3 cents	$66,666
100,000 bushels, in 16,666 barrels, on neighboring commission sale, at $3 50 per barrel of six bushels, or four hundred weight	58 334
100,000 bushels, in 16,667 barrels, for shipment to Alabama, at $3 per barrel	50,000
400,000 bushels, in 100,000 sacks, by railroad Southwestward, at $2 per sack, and paying 2 cents per ton per mile	200.000
400,000 bushels, in 100,000 sacks, sent by railroad east of Christianberg, at $2 per sack	200,000
Gross yearly sales	$575,000
CONTRA CHARGES.	
Assume rents at $25,000 for each saltworks —the Preston and King's Works	$50,000
Conveyance East, a mean of 150 miles by railroad, on 10,000 tons, in 100,000 sacks, at 2 cents per ton per mile	30,000
Conveyance West, a mean of 200 miles by railroad, on 10,000 tons, in 100,000 sacks, at the same freight	40,000
33,334 salt barrels, 30 cents each with packing, $10,000, and variously transported, at a mean rate of $1 per barrel, freight and sale, $33,334	33,334
36,000 Cords of wood to make 1,200,000 bushels of salt	60,000
All other charges attaching to the manufacture and delivery of the salt at the salines	60,000
Cost of 200,000 sacks and packing, at 30 cents each	60,000
Commission and contingent charges upon the collection of $575,000 gross value above	57,500
	$400,834
Apparent gain after every allowance of charges	$174,166

With a double-track railroad, the works are so situated that the seaboard salt cannot arrest the above valuations, nor can any interior saltworks now in operation arrest, but will often allow advanced rates.

At Kanawha the brine contains only one-fourth the salt of the brine at Preston and King's works, and the New York brine is one-third weaker than the Saltville brine. The brine here superlays one hundred and sixty feet in thickness of hard, reddish fossil or rock salt, containing in it no traces of *chloride of lime or magnesia*, but the brine, if not saturated by the salt, holds one half of one per cent. of the sulphate of lime or gypseous matter, which is easily expelled, and is indeed harmless. This snowy white salt becomes dry as chaff, nor can any state of weather cause it to become moist or to drip water. The floors of the bins are dry as parlor room floors very soon after the new salt runs off its water.—The masses of gypsum in the vicinity are known to be six hundred, seven hundred and fifty, and nine hundred feet in thickness; and the "*writer*" might well say, it too is sufficient for all its uses, not only in the United States, but for "all mankind and the rest" of the warm-blooded races. This is the oily water-chrystalized gypsum, much more available for vegetation than the anhydrous plaster of paris of New York and Sandusky, or Nova Scotia.

It will now soon be conceded that the richest mineral region exists within one hundred miles around Saltville, any where to be found over a like extent of ground.

Lead, copper, zinc, coal, silver, and gold, and above all, exhaustless masses of fine iron ore were here to be found, in all time past—"without money and without price."—Strangers and natives denied ownership, and refused payment of taxes because the taxes were so trivial. But now these rich grazing and farming lands will be sought after, and the hills will be claimed after the metallurgist stirs the ores with "a long pole."

I have made my notice too long, after omitting many points that would be interesting even to herring fishers or oyster planters.

DENNEY'S DIVIDED CAR AXLE.

Since the invention of the iron road, the attention of railroad men has been called to some feasible means for fitting car axles so as to enable the trucks to compass the the turning of curves with the least possible attrition. With the present stiff axle, the impingement of the inner wheel upon the edge of the rail is very great, especially at high speed, and on the broad gauge. Several means have been essayed to attain this desirable end, but none has yet gone into general use.

The Divided Car-Axle invented by Mr. Denney, seems to have the desired requisites to enable each wheel to turn independently of the other, and to do so not only with safety, but with great facility, while the manner in which it is fitted up gives every appearance of durability and strength. The valuable features claimed for it are, a saving of fully 50 per cent. in motive power, on crooked roads—reduced friction, consequently less injury to the rails—no liability to run off the track by the severe impingement of the flange of the inner wheel upon the rail causing it to trip and jump out of its place—no flattening of the inside wheel on curves by dragging, whilst the outside wheel is going over the increased distance—no twisting of axle-trees. In fact, the advantages of wheels turning upon their axles are so evident to all, that an enumeration is scarcely necessary.

The principle upon which the wheels work is the only point to be considered. This, in Mr. Denney's patent, seems to be as nearly perfect as it can be. It has received the approval of a number of scientific men, and will doubtless soon find its way into general use.

For a view of the invention, see cut at head of the advertisement in our columns.

The Eastern Steam Navigation Company's Great Steamer of 22,000 Tons.—The immense screw and paddle steamer, building at the yard of Messrs. Scott Russel, at Millwall, for the Eastern Steam Navigation Company, is to be completed in twelve months. Her keel is laid down, and several of her bulk heads or compartments, are raised, and the works are proceeding with energy and expedition. A railroad has been laid down along the entire length of her way, to facilitate the conveyance of the materials from the factory to the different parts of the vessel. The exact dimensions of the ship are as follows: Tonnage, builder's measurement, 22,000 tons; tonnage burthen, 10,000 tons; extreme length, 680 feet; extreme breadth, 83 feet; extreme depth, 58 feet; power of engines, (screw and paddle) 2,600 horse. Her engines are in course of construction by Messrs. James Watt & Co., of Soho, and Messrs. Scott Russel, and will be fitted in the vessel before she is floated off. The hull will be entirely of iron, and of more than usual strength, the magnitude of her size enabling Mr. Brunnel, the architect, to introduce many precautionary measures conducive both to support and security. From her keel up to six feet above the water line is double, of a cellular construction. The upper deck will also be strengthened on the same principle, and will form a complete beam, similar to the tube of the Brittania bridge, so that any external injury will not affect the tightness or safety of the ship. She is divided into ten separate water-tight compartments, each being 60 feet in length, enabling her to take in sufficient fuel for a voyage to Australia and back to England without stopping.

POST OFFICE DEPARTMENT.

The appropriations for the service of the Post Office Department, for the year ending 30th of June next, out of the moneys in the Treasury, arising from the revenues of said Department, are as follows:

Transportation of mails	$5,275,000
Compensation to Postmasters	2,000,000
Ship, steamboat and way letters	25,000
Office furniture in the Post Offices	8,000
Advertising	85,000
Wrapping Paper	55,000
Mail-bags	55,000
Blanks	65,000
Mail-locks, keys and stamps	26,000
Mail depredations and special agents	60,000
Postmasters' Clerks	560,000
Postage stamps and stamped envelopes	56,000
Miscellaneous	120 000
Compilation of Post routes	1,000
Patent of the clamshell padlock (condi'l)	5,000
Total	$8,394,000

And an appropriation from the general Treasury of not exceeding $2,344,464, to supply any deficiency in the Post Office revenue to meet the above. The Post Master General is directed to continue mail service between Charleston and Havana, in the months of August and September, as is now done in the other ten months of the year. He is also directed to establish a mail on the Mississippi river, from Cairo to New Orleans and from Keokuk, Iowa, to Galena, Illinois.

The Fall in Stocks at the East.—It is an ascertained fact that the loss to the holders of railroad stocks during the past twelve months, has been more than one-fourth of their whole interest. Taking the eight prineipal railroads, whose shares are sold daily at the New York Exchange, it will be seen that their decline has averaged $29 per cent., according to the following figures:

Railroad.	Price. 30th July,'53	31st July,'54.	Fall.
N. Y. Central	117¼	87	30¼
Erie	77½	45¼	32
Reading	88	63	25
Mich. Central	112	86¾	25¼
Harlem	62	37	25
Hudson River	71	50	21
North. Indiana	123	95	28
New Haven	104	(?)	at least 50

Cincinnati and Covington Bridge Company.—The books of this company are now open at the office of Mr. J. R. Taylor, adjoining the Madison House in Covington. We understand that the right of way has been secured by purchase, and that $300,000 of the stock is already taken.

CENTRAL OHIO RAILROAD.

The track laying at this end of the line is progressing at the rate of about a quarter of a mile per day, some ten miles being now laid and levelled up. On the west end the track is being laid east of Cambridge, at greater speed, and the laying will reach Barnesville by the 20th of September. We learn that by the same date, the track on this end will be laid to about Wrightstown, and that the locomotives will be run at this end after that date, to carry way freight and passengers; coaches running for about seven miles between Wrightstown and Barnesvills, until the track is laid. This will enable the company to accommodate persons going to the Ohio State Fair, at Newark, and we have no doubt large numbers of our citizens will avail themselves of the opportunity.

Contracts have been made for two steam ferry boats of peculiar construction to take freight and passengers across the river, which boats are to be done by the first of October. The Baltimore and Ohio Railroad is filling for a switch to the river at Benwood to meet these boats. This is a result ripening that we have long predicted.—*Wheeling Gazette.*

Passumpsic Railroad.—The annual meeting of the Connecticut and Passumpsie Rivers Railroad Company was held at White River Junction on Monday, July 31st. The report shows that the earnings of the road, for the year ending May 31, were $162,688, or about $2,000 less than those of the previous year. The expenses were $107,115, a large portion of which was for relaying the track for the first forty miles of the road. Of the net earnings, $46,620 were appropriated for the payment of interest on the bonds, leaving $8,953 to be carried to the contingent account. The report recommended a delay in the proposed extension of the road from St. Johnsbury to the Canada line at Derby, till the public confidence in railroad securities shall be recovered from the recent shock occasioned by frauds here and in New York. The following directors were chosen, Mr. Keys being subsequently elected President, in place of Mr. Fairbanks declined: Erastus Fairbanks, Wm. Thomas, Wm. H. Weld, B. P. Cheney, C. W. Chapin, E. Cleveland, Porter Baxter, Josiah Stickney, Emmons Raymond, B. B. Mussey, Fitz Henry Homer, E. B. Chase, Arthur Latham, Henry Keyes.

Southern Wisconsin Railroad.—The Common Council of Janesville, with great unanimity, adopted an ordinance on Wednesday evening approving of the contract made between the Milwaukee and Mississippi and Southern Wisconsin Railroads, and also an ordinance to loan $150,000 towards the completion of the road, which had been previously voted to the Southern Wisconsin Railroad. We learn that the citizens intend to raise $50 000 more by subscription towards the same object. This result is creditable of the citizens of Janesville, and is worthy of the emulation of Milwaukee.—*Mil. News.*

HOW THEY DIG ANTHRACITE.

The Rochester *Democrat* has a letter from Scranton, Pa., descriptive of the manner in which the Anthracite coal of that region is dug and conveyed to the surface :

This bed is entered by a horizontal digging through earth and sand upheld by timbers for a few rods, till the coal is reached in a bed perhaps six feet thick, lying in the midst of a floor of rock on the bottom and top. This bed lies at the bottom of a hill, sloping upward to the west some hundred feet, and containing other beds above, and separated from this and each other by strata of rock, 25 feet between some, to 70 or 80 feet between other beds. This bed extends through the hill probably, and covers some hundred acres.—Here the entrance is nearly horizontal, but the coal strata often has an inclination to the horison from 10 to 35 degrees, according to the variation in the upheaving power by which they and the whole rocks have been raised from under the ocean in times long gone by, doubtless long before the race of Adam was placed on earth.

The coal is broken out by blasting, and a great many men and boys are employed in this process, and in removing the coal into the open air and daylight. A path is cut by blasting, into the bed, wide enough for the carts drawn by mules to enter. At the proper distances cuts are made at right angles to the main path. These are cut across by paths parallel to the main path, and the coal borne away, thus leaving solid blocks of anthracite, perhaps twenty feet square, to uphold the strong roof of the bed, between which the coal is removed about fifty feet wide. Thus the bed is cut up into the figures of a chess board, the blocks remaining for the support, and not being moved like chess-men. More than half a mile of these cuttings are already made in this bed. The air within is cool, and ventilation is secured by sinking shafts from the surface above down to the cavity formed. As yet no inconvenience is felt from the combustion of the gunpowder or confinement of the air, so completely is the ventilation secured by the process adopted.

The excavation must of course be dark as the blackest midnight. The workmen use oil-lamps to give them work. The boys who drive in the coal carts and drive out the coal, have each a small oil lamp fastened to his hat, for his own illumination.. Viewed from some distance within, the scene is wild and magical, and one thinks of pandemonium as the blackened Vulcans come along with their lighted lamps bobbing up and down. But the jokes, and songs, and pleasantry, and happy activity, soon convince you that this is another sort of pandemonium. The workmen and boys are said to be healthful, industrious, well paid and prosperous, and find a competent support for a multitude of contented families, whose small and comfortable dwellings are scattered at various distances from the bed. The Lackawanna rolls on at a little distance, and has the power of whitening the coal-bearing faces and bodies of the laborers, especially if employed in adequate quantity.

The whole view is worth a ride to Scranton, even from Rochester. Come and look at nature and art. The coal is brought out, but I cannot follow it further. C. D.

York and Cumberland Railroad, Me — The Annual meeting of the stockholders of the York and Cumberland Railroad was held yesterday.

The report of the Directors shows the cost of the road to be $758,987 74, including discount on bonds, interest and other expenses. Floating debt $82,163 54.

The receipts for running the line for the year ending June 30, 1854, were - - -	$31,558 35
Expense of working, - -	19,254 09
Net income, - -	$12,304 26

Number of passengers carried, 82,640
Number of tons of freight do., 19,866
Cost per mile run, 44 cents.
Proportion of expense to gross earnings, 6 per cent.

The following is the list of Directors chosen :

N. J. Miller, N. D. Appleton, Samuel D. Hanson, Toppan Robic, George Warren, Josiah Pierce, James Mann, Austin G. Fitch, Ellis B. Usher, Phineas Barnes, Horace V. Bartol, Allen Haines, Wm. G. Chadbourne,

Oldtown and Lincoln Railroad.—The annual meeting of Stockholders of the Oldtown and Lincoln Railroad Company came off yesterday. There was a spirited attendance. The executive part of the meeting was ably conducted, there being two persons present who were by different parties recognized as President. But no troubles arose, as they sat with ease and dignity, the acting clerk doing much of the duty with the request or acquiescence of the officers and all concerned. On the whole it was a pleasant time. The result of the ballot for Directors was as follows :

John Winn, George K. Jewett, Charles Stetson, W. H. McCrillis, Asa Smith, J. T. K. Hayward, Samuel F. Hersey, Henry E. Prentiss, John A. Cushing.

At a meeting of the Directors subsequently held, John Winn was elected President of the Corporation, John A. Peters, Clerk, and Solomon Parsons, Treasurer, for the year ensuing.—*Bangor Mercury.*

Wabash Valley Railroad.—A contract with responsible parties has been made to construct this work, conditioned that $200,000 is raised on the line. Vincennes and Lawrence county, have taken $40,000, Crawford $55,000, Clark $55,000, leaving $50,000 to be made up by the citizens of Edgar. Of this amount some $33,000 has already been subscribed, leaving a balance of about $17,000 to be provided for, which must be completed within a short time, as the Directory meet on the 25th at York, and will then decide when the work along the whole line shall commence.

Mr. Summers, Chief Engineer, Mr. Osgood, one of the Engineers of the Ohio and Miss. Railroad Co., and Messrs. Allen and McGrady, the contractors, have expressed themselves highly delighted with the *location* and *capacities* of the route, deeming it in every respect, equal to any in the West.

Illinois River Railroad.—The corps of Engineers employed by Messrs. Farnam & Co., completed their preliminary survey of the proposed route of the Illinois Railroad on the 4th inst. We understand that they found the route not only practicable, but highly favorable. As a full report will be made in a few weeks, we do not more than notice the completion of the work at this time. We shall give the report of the Engineers as soon as it appears.

There is reason to hope that these active and energetic railroad operators may be induced to undertake this important work, and push it forward from the completion of the Bureau Valley Railroad, which will be in a very few weeks. It will have a material effect upon the work between this point and Alton, which just now, in spite of its importance, is unaccountably suffered to languish.—*Morgan Journal.*

Dayton and Michigan Railroad.—The Dayton and Michigan Railroad Company has for some time owed $50,000 to parties in New England, which was costing 2 per cent. a month. Desiring to pay off the debt, the Board placed real estate, valued at about $400,000, in the hands of Mr. Beckel and Judge Barbee, with the authority to effect a loan for the amount needed. We learn that, being made entirely safe by the securities mentioned, they borrowed the money yesterday, on their individual names, from the Ohio Life Insurance and Trust Company, *at six per cent.* The operation is a heavy saving to the Company, and places its credit in a favorable position both abroad and at home. Its means are not only abundant, but its officers and backers are gentlemen of that substantial wealth and character so important in these times of monetary caution.—*Dayton Gaz.*

Cin., Wil. & Zanesville R. R.—We are indebted to E. W. Woodward, Esq., the gentlemanly Superintendent of this line for courtesies extended to our Mr. James, who passed over that road a few days since, and speaks in terms of the highest commendation of the route, which, when completed to Zanesville, its eastern terminus, is destined to be a great thoroughfare, rivaling in amount of business any other line in that direction.

The rapid and thorough manner in which the road has been completed thus far, reflects great credit upon the directors, engineer and superintendent. We anxiously look for its final completion.

Mississippi and Red River Railroad.—We learn from the Camden, (Ark.,) *Herald* that a planter in Columbia county proposes to be one of eighteen to grade the thirty-six miles not yet under contract on the Mississippi, Ouachita and Red River Railroad, between Camden and Red River. He proposes to take stock in payment for the labor. Several planters have already responded to this proposition and it is thought that the requisite number (eighteen) will be made up within a few weeks. This will secure the grading of the road from Camden to Red River within the next two years.

MONETARY.

The demand for money at the East is active, and increasing, though the supply is still abundant, only requiring undoubted securities to obtain it at comparatively low rates. Call loans are readily had at 5 @ 7 ℘ cent., Number One business paper, at 9 @ 10 ℘ cent., while railroad securities have to go begging at almost any sacrifice.

Sterling Exchange we quote at 108½ @ 109⅝, according to the names of the drawers.

In the Stock Market there seems an entire stagnation; some slight stir took place since our last report, but it was not sustained. Nevertheless we hear of purchases of railroad bonds, privately, for foreign account, the present low rates acting as an inducement for the purchase for permanent investment, a very judicious move too, in our opinion, as these securities must rise on the market; the country is so deeply in for railroads now, that the system must be completed; this consummation may be delayed, but it must and will come; the business of the country calls for it, and that will secure its completion.

The sales of Stock at auction in New York City have been small, and at generally low rates. We give as follows:

Sales by A. H. Nicolay, Aug. 14, 1854—

$8,000	Bonds	Chicago & R'k I'd. 7s. conv. '78	$75 65
5,000	"	N. Y. & Erie, 7s. '71, conv	65 00
4,000	"	N. Y. & N. H., 7s. '66	80 50

The above with interest.

55	Shares	Panama Railroad	94 50
140	"	New Jersey Trans. Co	121 75
11	"	Galena & Chicago Union	103 75
20	"	" "	103 25
20	"	Cleveland & Pittsburgh	55 00

By the same, 17th inst—

$8,000	Bonds	Mays. & Lex. 2d mort 6s. conv. '78	10 00
9,000	"	Illinois & Wis. 7s. conv. '73	45 50
1,000	"	N. Y. & N. H., 7s. '66	84 00
4,000	"	" "	83 50
2,000	"	Buff. & Corning, 7s, '67	56 25

All the above with interest.

We notice in the returns of Earnings of the railroads throughout the country a continued and heavy increase of receipts over the same months of last year, which is an unmistakable evidence of their prosperity. Our advice to our friends, therefore, is to hold on to what stocks you may have, if you can,—if you have means for a permanent investment, seek some of the productive Western stocks, now selling so low in the market and you will not have cause to regret the purchase.

At the West we have no material change to note in monetary affairs; the same unsettled feeling exists, caused by the disturbance in currency. The issues of foreign banks form at least two-thirds of the business currency of our state, especially in small notes; thus the discrediting of these, and the absolute refusal of some of our bankers and brokers to receive even the larger bills, have caused serious inconvenience in our mercantile community, nor can we hope for a better state of affairs until the new law goes into operation, 1st of October next; what we are to do then for small bills we cannot see, as we can scarcely find an adequate supply at this time; and as to silver change, it is preposterous to think of getting a supply.

The Bankers and Brokers have had a meeting and classified these foreign issues, and promulgated the manner in which they will continue to receive them, thus:—First class, consisting of the most inaccessible Indiana Free Banks, will be received at their counters until Sept. 1st, in denominations of $5 and upward, at par, less denominations at a discount of 1@2 per cent.—Second class, Virginia Banks till 11th Sept. Third class, all Indiana Free Banks, under $10, 20th Sept.—Fourth class, all Foreign Banks under $10, Oct. 1. After which date, no foreign bills of less denomination than $10 will be received by them.

Eastern Exchange is scarce, and mixed currency sells at 1¾ premium.

In the Stock Market there is but little doing, the bulk of the operations being the closing up of hypothecated stocks, as forced sales, which consequently presents no fair criterion of the value of such stocks, though it gives a fair idea of the state of the market.

RAILROAD AGENCY AND FURNISHING ESTABLISHMENT IN NEW YORK.—Messrs. Bridges & Bro., No. 64 Courtland street, keep constant supplies of every article in use upon railways, or in the construction of the same, which they are prepared to supply in large or small quantities, on fair terms and at manufacturers prices.

They are also prepared to contract for any articles in their line in quantities. See advertisement.

MURDERED.—Mr. Blackburn, the Superintendent of the Nashville and Henderson Railway, was recently stabbed by one of the railroad hands—an Irishman, named Robinson—and died in a few minutes.

AMERICAN HARDWARE, AND MECHANICAL SKI .

"The following from the "United States *Eeonomist,*" will open the eyes of thousands of our people to the growing importance of certain kinds of manufacture, made at home, and which the great majority, of our people I suppose arc made in England :

"The manufacture of many articles of hardware, has lately been introduced into this country, and firmly established. This has, in fact, beсn constantly going on for many years. Forty years ago not more than half a dozen leading articles of the trade were of our own manufacture: the rest were all imported; now, by far the greater part of the trade is in articles made by our own artisans. The imported articles, too, arc one after another, yielding the palm of superiority to those of American manufacture. American enterprise, machinery, skill, and ingenuity are more than a match for European fogyism. The English manufacturers aim at producing a cheap article, strong enough to avoid being blown to pieces by the wind; the American manufacturers aim at producing, and, in nine cases out of ten, succeed in producing an article as cheap as that imported, and possessing at the same time, the qualities of simplicity, strength, and durability. This is especially the case with regard to light articles, such as door latches, locks, &c. Many of our heavy articles are unapproachable by the English imported goods. For instance, our Eagle anvil, with its cast steel face, is firmer and more durable than the English anvil, of wrought iron. The American chain vise is an improvement unknown there. The augers made here are far in advance of the English ideas of progress, and so of many other articles. Five years ago masons' trowels were all imported; now $30,000 worth of trowels, confessedly superior to the English, are made by one manufacturer—Mr. Bisbee, in South Canton—and his business doubles annually. Even the celebrated Congress penknives are now re-produced by our own workmen with all the elegance and excellence of the English knife, and we might extend the list indefinitely. Again, the American goods are generally warranted, an advantage not possessed in our home market by those which are imported.

"The exportation of American hardware has sprung up, almost entirely within the last few years, and is rapidly becoming a very extensive business. Already have American goods found their way into the British Provinces, and are there preferred to their own (English) home manufactures, thus competing successfully with English goods in their own markets. The exportation to Canada especially is rapidly increasing, and almost doubles annually. The Douglass axes are sold even in London. Large quantities of goods are also sent to the West Indies, South America and to all parts of the world."

RAILWAY TRAVELING.—Mr. Meigs, of New York, in an elaborate paper on railways—a subject with which he is well acquainted, having made it a study since 1818, when he predicted in the New York Legislature, as he did two years before in a newspaper, that they would be traveled at an average speed of 15 miles an hour—says that the Emperor of Russia has taken the first great step towards the ultimatum of railroad travel. Instead of cutting a mere drill through the country, and going around everything in the way of a straight line, he has cut a broad way 500 miles, from St. Petersburgh to Moscow. He has made it all the way 200 feet wide, so that the engineer sees everything that comes on the road. Such is part of the future. The railroad from point to point with a mathematical line. The rails ten times stronger than are now used, the locomotive on wheels of far greater diameter, the gauge of a relative breadth, the signals and time perfectly settled; the roads on both sides, during the transit of trains, having the gates of the wall all closed—then instead of traveling 100 miles an hour, we shall more safely travel 300 miles an hour. That now seems fast enough, as did 20 a few years ago, and we are now on very unsafe rails on some straight runs, treated to 60 miles an hour in this country, and in England to 100.

DUBUQUE AND MINNESOTA RAILROAD.—We notice that the President of the United States has withdrawn from sale all the public lands on the great route from Dubuque via St. Paul to Lake Superior. The road strikes the Lake at the mouth of Left Hand river in Wisconsin. Thus we see lands withdrawn in Iowa, in Minnesota and Wisconsin.

The grant of land by act of Congress could not go to any company then organized. Since that time however, the company then unorganized, has organized and paid in the necessary amount to secure the grant, and has already taken the preliminary steps to survey the line; and before three years expire, cars will leave the Depot of the Chicago and Galena Railroad Company for Lake Superior, making the trip in twenty-four hours.

In view of the fact, we learn that one of the most eminent engineers in America is examining the Mississippi just below Dubuque and Dunlieth with reference to a plan and site for a bridge.—*Chicago Democrat, July* 25.

RAILROAD HARDWARE, ETC.—We call the attention of railroad Contractors to the advertisement of Tyler Davidson & Co., as found in our columns. It embraces a great variety of articles in use in railway construction, any of which this firm will furnish on good terms and at prices that will render it useless for parties to go East for supplies.

ACKNOWLEDGMENTS.

We are again indebted to Hon. S. P. Chase for Public Documents—the "Report of the Commissioner of Patents;" Part 1st, being the Mechanical portion of the Report.

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the morits of this valuable invention, which offers to add largely to the safety of life and property.

Tho valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads : the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, whicb not only destroys the rail but puts a constant strain upon tho wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, whilc the opposite wheel is traversing its greater distance; tbe tendency of which, is to wear the wheel flat, and cause it, or tbe axle, to break sooner or later. Thero is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reasou that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle ; and therefore, it requires no more strength of iron at any point between the wheels. than is contained in the hearings, which in the ordinary axle, is not more than one-third of tho strength of tbe other portions of the axlo.

The elongated bearing wbich forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to ho set up not oftener than once in twelve months, hy a slight tightning of tbe screw nuts. If, from long service, the alloy becomes worn out, it can he refi'led, making it as perfect as when first filled up, aud tho gauge of tho wheels will ucver become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of timo sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that wo now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to disposo of rigbts to use tho above axle on tbe following terms: We guarantee full and porfect satisfaction by giving ample time to tboroughly test its merits, and will roquire no payment to he made until such satisfaction has been given. All applications to he made to

Norris' Locomotive Works,

PHILADELPHIA.

ENGAGED for many years in manufacturing Locomotives, offer to Railroad Companies to construct of any plan or size,

LOCOMOTIVES OF SUPERIOR QUALITY.

Our facilities for doing work have been largely increased this year, and orders can be executed with dispatch.

jy. 27. RICHARD NORRIS & SON.

TO RAILROAD COMPANIES.

THE subscriber, manufacturer and agent for manufacturers of railroad materials, would solicit from railroad managers in the West their orders for

RAILROAD SPIKES, CAR AXLES, RUBBER SPRINGS, RUBBER HOSE, LOCOMOTIVE TIRES, SPRING STEEL, CAST STEEL, NUTS AND WASHERS, LOCOMOTIVE LANTERNS, ETC.

A. S. WINSLOW,
9 and 11 West Second Street,
mr. 24 † Bet. Main and Walnut Sts. Cincinnati.

Locomotive Tires and Car Axles.

THE undersigned is prepared to supply Railroad Companies and Builders with Tires and Axles of superior quality and finish, made from faggotted charcoal iron, formed and finished entirely under the hammer. For the character of the manufacture he refers to builders and companies who have used them in the West.

A. S. WINSLOW
mr.24-†] 9 and 11 West Second St., Cincinnati.

ENGINEERS' MATERIALS.

EGGERS & CO.,

WHOLESALE DEALERS IN

PAPER & STATIONERY,

Since first January,

No. 127 Walnut St., bet. Third and Fourth.

CINCINNATI,

Keep the most complete stock in the West of every thing used by Engineers. On application, a catalogue with prices will be forwarded. [jy.21-†.

To Railroad Contractors, Quarry Men, &c.

THE attention of those interested is called to ASH'S IMPROVED HORSE POWER ROCK DRILL, for Railroad Excavation, Stone Quarrying, Well Boring &c.

This Drill is worked by HORSE POWER, requiring but one horse and one man, to keep it constantly at work, with great ease and velocity, performing 60 strokes per minute. It is cheap of construction and repair. The AUGER weights from 300 to 500 pounds, will drill a perpendicular or inclined hole FOUR INCHES IN DIAMETER, at the rate of from 8 to 16 feet per day in ordinary limestone. It has drilled 2 feet in one hour.

For rights to use for Counties or States, apply to the Patentee. WILLIAM F. ASH,
May 20, 3* Springfield, Ohio.

MUSKINGUM WORKS,

ZANESVILLE, OHIO.

DOUGLASS, SMITH & CO.

WOULD respectfully call the attention of Railroad Companies to their establishment at Zanesville They are prepared to execute orders, on short notice, for

Passenger Cars of the most superior description,

Second Class Passenger, Mail Express, and Baggage Cars; Freight, Cattle, four or eight wheeled Gravel Cars.

We manufacture a superior

CAR WHEEL,

Over 2500 of which are now running on the Central Ohio Railroad, and many of these have been in use on the road over two years, having in that time only three to crack, and two to be renewed in consequence of the wearing of the Chill. We have also commenced the manufacture of the celebrated

WASHBURN WHEEL,

And are prepared to furnish this wheel, with or without axles. Also, castings for Cars fitted to order at the shortest notice.

BOLLMAN'S PATENT IRON & WOOD BRIDGE.

We are also agents and builders of the above celebrated Bridge. Are now placing upon the piers an iron bridge on this plan over the Muskingum river at Zanesville. We are ready to contract with companies for the construction of this Bridge. All orders addressed

DOUGLASS, SMITH & CO.,

Pure do do

Pipe and Manhole Rings, all sizes;

Square or Rope Packing, do.

HOSE.

India Rubber, Hydraut, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agen of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations. This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils, -10 casks, assorted weights n w in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to

WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York,

And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

J. B. FORD is the Company's Receiving Agent at Wheeling.

au25 P. W. STRADER, Gen'l Agent.

Cincinnati, Wilmington and Zanesville Railroad.

OPEN TO LANCASTER.—Two daily Trains, (Sundays excepted) between Lancaster and Cincinnati. On and after Monday, June 26th, 1854, until further notice, trains will run as follows:

The morning Train leaves Lancaster at 5.10 A. M., and arrives at Cincinnati at 11 15. Returning leaves Cincinnati at 3.05 P. M. and arrives at Lancaster at 9.30 P. M.

The downward accommodation train leaves Lancaster at 10.05 A. M., and arrives at Cincinnati at 5.40 P. M.

The upward accommodation train leaves Cincinnati at 7.30 A. M., and arrives at Lancaster at 4.00 P. M.

Trains will stop for passengers as follows: At Amanda, Stout's, Circleville, Williamsport, Four Corners, New Holland, Washington, Rattle Snake, Sabina, Cross Roads, Wilmington, Sligo, Clarksville and Morrow; and on the Little Miami Road at Deerfield, Butterworth's, Water Station, Loveland, Miamiville, Milford and Plainville, and on proper signal by flag, or to the Conductor, at Branch Hill and Linwood, at Turnpike.

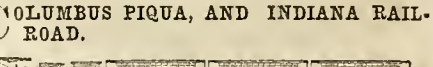
The downward Trains connect at Morrow with the Trains on the Little Miami Road for Columbus.

Lines of Omnibusses and Packets will run between Circleville and Chillicothe, and Stages and Packets between Lancaster, Logan, Nelsonville, Athens and Pomery; and Stages between Lancaster, Somerset and Zanesville connecting with the morning train from, and evening train to, Cincinnati.

Fare from Cincinnati to	Washington	$2 50
" " "	Circleville	3 00
" " "	Lancaster	3 60
" " "	Chillicothe	4 00

For other information and Tickets, apply at Ticket office, corner of Broadway and Front sts, and at the Little Miami Depot, or to the Station Agents on the line.

E. W. WOODWARD,
Engineer and Superintendent.



The Omnibus Line will call for and deliver passengers to and from the trains to any part of the City.

J. HOWELL, Conductor.

The Company will not be responsible for baggage exceeding $50 in value, unless the same be returned to the Conductor or Agent, and freight paid at the rate of a passage for every $500 in value above that amount.

je. 29

COLUMBUS PIQUA, AND INDIANA RAILROAD.

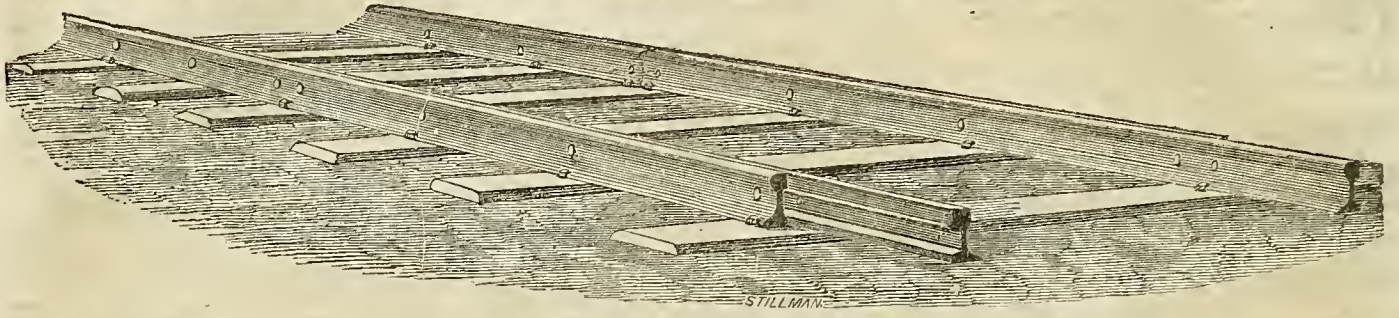
New route from Columbus, West and from Urbana, East.

On and after Monday September 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between COLUMBUS and URBANA. Will leave Columbus at 4.50 a.m., and 3.30 p.m.—arriving at Urbana at 8.12 a.m., and 6.34 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with the night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morning Cleveland and Zanesville trains can have a few hours at Columbus and leave by the 3.30 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton and Cincinnati.

The 9.15 a.m. train from Urbana connects with the morning train from Cincinnati and Dayton that arrives at Urbana 8.10 a.m.—arriving at Columbus at 12.05 p.m in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Saudusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibuses will connect with the trains at Urbana for the conveyence of passengers to and from Piqua and Greenville over a good Macadamized road.



A. G CONOVER, Sup

RAILROAD IRON, LIGHT WEIGHT.

470 TONS, 47 lbs. per yard, good quality and pattern, now lying at New Orleans. For terms, apply to VOSE, PERKINS & CO.,
sp27-tf New York.

WINSLOW'S
PATENT COMPOUND RAIL.

THIS RAIL, which is represented by the aoove, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a

THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are—a saving in the wear and tear of Machinery—it saves, to a great extent, in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable Being practically a continuous Rail for the entire length of the road, without break at the ends of bars, the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effects upon Cars and Machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at Hanging Rock Iron Works, upon the Ohio River, and at Mt. Savage Iron Works, Maryland. Specimens of the Rail and patterns of the same will be gladly shown, as well as information in relation thereto, given by application to

A. S. WINSLOW, Nos. 9 & 11 West Second Street, bet. Main and Walnut Sts., CINCINNATI.

J. F. WINSLOW, Troy, New York.

WHEELBARROWS!

ON hand, Wheelbarrows, of my own manufacture, suitable for Railroad, Turnpike, Canaling, etc., in ots to suit purchasers. Orders filled for any reasonable amount. HENRY ROCKEY,
jy. 20. No. 21 East Front st.

CAR MANUFACTORY,
Dayton, Ohio.

E. THRESHER & CO., having enlarged their shops, are prepared to contract on favorable terms, for building every variety of railroad Cars, in any quantity and on short notice, made of the best materials, and of the most approved workmanship.

They are prepared also to furnish jaws and boxes; the Washburn Wheel, 30 and 33 inch, adapted to inside or ontside bearing; cast iron frogs, steel plated; and switches of the most approved patterns.

They also manufacture blacksmith tuyeres, Harris' Patent; portable bolt forges: bolt heading and bolt cutting machines; upright drills, wheel presses; wood planers; tenoning and mortising machines, etc.

They respectfully invite the attention of railroad directors and superintendents to their establishment.
Dayton, Jan. 24th, 1853. jan.25-†

KENTUCKY LOCOMOTIVE WORKS.
CORNER OF KENTUCKY AND TENTH STS.
LOUISVILLE, KY.

THE Proprietors of the Kentucky Locomotive Works would respectfully inform Railroad Companies and the public generally that, having completed their establishment, they are now prepared to receive and execute orders with fidelity and dispatch.

They will contract for

Locomotives, Passenger, Baggage, Freight, Gravel and Hand Cars,

Of every style and pattern, as well as all kinds of St and Machinery required for railroads.

Partienlar attention will be paid to repairing, which they have every facility.

They are also prepared to contract on favorable terms for building all kinds of Machine Tools, such as Turning Engines, Lathes, Planers, Drills, Slotting, Spliting, and Shaping Machines, of every variety of pattern.

Having also a large FOUNDRY connected with the establishment, orders for Castings are solicited, and will be filled with promptness.

Car Wheels of any pattern can be furnished on short notice. Double and single plate and Spoke Wheels of all sizes constantly on hand.

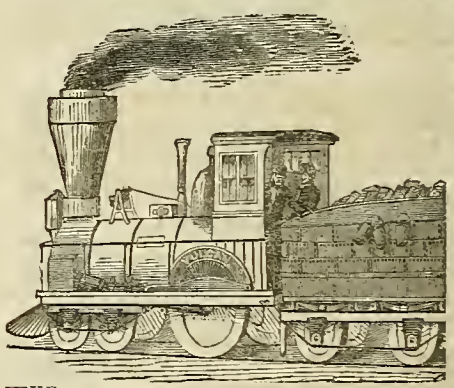
☞ Communications or orders must be addressed to OLMSTED, TENNYS & PECK,
je.8-tf Louisville, Ky.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Resevoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.



The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,
PRINCIPAL AGENT,
May 18.6* Office, No. 167 Broadway, New York.

Cincinnati Locomotive Works!

THE undersigned are prepared to furnish Locomotives equal in efficiency and durability to the best Eastern manufacture. Also, Shaping and Slotting Machines suitable for railroad shops. Also, all kinds of heavy forging and casting done at short notice. Also, bolts for bridges cut with dispatch.
ap. 20 MOORE & RICHARDSON.

ASHCROFT'S
METALLIC STEAM GAUGE.
(BOURDEN'S PATENT)

THE subscribers offer for sale this valuable Gauge. It is adapted to Locomotive and other steam boilers, indicating with accuracy the continual variations of steam within the boiler, enabling the Engineer to maintain a uniform and safe pressure. Any of the Eastern Railroads may be referred to for proof of its importance and value. BRIDGES & BROTHER,

MISSISSIPPI & MISSOURI RAILROAD.—From the Burlington Telegraph we learn that the work on the Burlington and Missouri river railroad, as far west as Ottumwa (seventy-five miles) is being prosecuted all along the line with an energy which is at once gratifying and astonishing, and we do not entertain a doubt that it will be completed for that distance with a rapidity almost if not entirely unexampled in the railroad history of the West.

The eastern road is also going ahead most encouragingly, and we have some reason to hope that within a few weeks, or at most a very few months, we shall have a direct and unbroken connection between this city and those of the Atlantic seaboard. Our friends at Peoria are moving in solid column and with renewed zeal in all that belongs to them in the premises, and we cannot doubt that their efforts will be crowned with an early and triumphant success. Their papers breathe the right spirit, and we infer as a matter of course that they but faithfully reflect the general sentiments of the people among whom they are published.

KENNEBEC AND WISCASSET RAILROAD, ME.—The Lincoln *Democrat* is informed by a gentleman from Wiscasset, that the citizens of that place are subscribing rapidly to the stock of the Kennebec and Wiscasset Railroad, and there is every prospect that the work will be commenced on the road during present season.

REMISSION OF DUTY ON RAILWAY IRON—INFLUENCE OF RAILWAYS ON NATIONAL INDUSTRY.

We conclude our argument on this subject, with the remark, that we will freely admit any articles on the opposite side, of reasonable length and moderation. We have not written with any desire to exclude other views, or to have the question determined on any other grounds than those upon which a statesman would like to place it.

We have proved (1st) that the duty on railway iron is a heavy burden on the construction of railways, amounting, at the present time to a tax of near five millions per annum; (2d) that this tax is not needed for the purposes of revenue, and (3d) that it does not benefit the American manufacturer. We shall now proceed to show that if (as far as possible) this tax results in seriously obstructing the progress of railways, and thus *changing or drying up* a large stream of employment, industry and investment, that change must prove disastrous to the county. Let usex amine first, the payments made for imported railway iron, and see whether in the present state of financial affairs, these payments can be continued, or whether they will not arrest the progress of railways. The following are the payments made for imported iron rails, for the year ending June 3d, 1853:

Value (excluding ordinary bar)	$12,500,000
Duties, cash, 30 per cent	3,750,000
Aggregate payments	$16,250,000

The greater portion of the original cost in England is paid in bonds, or in some kind of debt on time, which constitutes one great inducement for the purchase there. But when bought, *four millions in cash* must be immediately paid to obtain it from the Custom House. This is about 7 per cent. on the entire cost of 2,000 miles of railway completed; and about 22 per cent. of the cash raised by the stockholders. It is not to be doubted, therefore, that either the railways will be, to a large extent, arrested, or we must erect American iron works capable of supplying this universal demand. Why not erect American iron works! says one at once, in the most potriotic spirit. If this can be done, there are two sufficient reasons why they will not answer the immediate purpose. First—Iron works on a great scale, sufficient for this cannot be erected in time to meet the demand; and secondly, they will not be, for the same reason that obstructs railways—*the want of immediate available capital.*

We come to the conclusion that the tax on railway iron is likely, if continued, to obstruct the progress of railways, and thus change to a great extent, one of the principal channels of employment, industry and investment. Let us now examine what effect this will have on the industry commerce and finance of the country. It has been assumed, —with a want of reflection quite surprising —that railways have absorbed capital, and that to arrest railway construction would benfit mercantile affairs! This extraordinary position needs no controversy. All the history of railways prove, by incontrovertible demonstration, that they have immensely increased the capital of the country, given new facilities to commerce, and extended the range and amount of mercantile operations to an extent never known before. These are facts not to be controverted. But let us examine the effect on the industry and commerce of the country by arresting the progress of railways.

First. Capital to be created,—which will not exist if railways do not go on, equal to the wants of the country.

Massachusetts has 1,200 miles of railway, and *one twenty-fifth part* of the American population. At this rate the United States should have 30,000 miles of railway. But she has only the *two hundred and fortieth* part of the territory of the United States, exclusive of the territories. At that rate, there should be 288,000 miles of railway. Combining these ratios, and looking to the continued growth of the country, we must believe that 100,000 miles of railway by the year 1870, would by no means exceed the useful and profitable limits of such works. We have, say 18,000 miles of railway now, and in the next sixteen years we might usefully construct 80,000 miles more. This would be equivalent to 5,000 miles per annum. Looking however, to what is now actually constructed, and to the works in progress, we find that 3,000 miles per annum would be no more than a *minimum* estimate of what will be completed per annum, if the financial obstructions are removed, and railways be pursued only as a legitimate and profitable business. We will suppose that from financial difficulties the amount completed is reduced to 1,000 miles per annum; then the capital, labor, profits, and all things collateral to the construction of 2,000 miles of railway will be diverted into other channels or lie dormant.

Now, it has been satisfactorily proved, that on the completion of a railway, (after deducting a discount on the market value of stock) there is an absolute *gain* to the country, in the the increased value of lands, of commercial facilities, of freight, of interest, and other incidentals, fully equal to 150 per cent. on the capital. Thus the railway adds to the capital of the country.

The capital gained then, on the aggregate of railways, which may be under favorable circumstances, constructed in one year, would be—

3,000 miles of railway, cost	$90,000,000
Increased value, 150 per cent	135,000,000

Now, if two-thirds of this amount of work (2000 miles) be arrested, then the expenditure and the gain will be reduced to the following amounts:

1,000 miles of railway cost	$30,000,000
Increased value at 150 per cent	45,000,000

The arrest of railway construction to the extent of 2,000 miles per annum, would indeed diminish the amount of capital required, by $6,000,000; but it will also *diminish the amount of capital left in the country at the end of the year, by* $90,000,000.

But the practical result is far more striking than this, for as we have formerly shown, $6,000 out of the $30,000 per mile, is in iron bought abroad on credit; and 20 per cent. stock, taken by the contractors, may represent their profits or gains. So that $11,000 per mile may be struck out of the active capital of construction, reducing the total to $19,000 per mile active capital. It is $19,000,000 only then which makes a gain in capital of $45,000,000, and the subtraction of $38,000,000 (or 2,000 miles) reduces the capital gained to the country at the end of the year, by $90,000,000. Considered then, in the mere light of a mercantile transaction, the reduction of the amount of railway construction below the present average, must not only diminish so much of the active capital employed, but also reduce by at least double that the amount of solid capital accumulated during the year. Some example of the practical applications of this principle we have in the increased value of property in several of the states, where railways have been most extensively introduced. For example, the assessments of the state of Ohio, at an interval of two years, were as follows, viz:

In 1852, aggregate value	$520,000,000
In 1854, " "	800,000,000
Increased value of property	$280,000,000

Now, in what way has this increased value been created? There are but three ways in which the aggregate value of a state can be increased—

1. By the absolute profits (or accumulated capital) of labor, in agriculture and manufactures.

2. By the profits of labor, put in *permanent improvement*, such as roads, canals, fences, houses, factories, etc.

3. By the improvement in *commercial facilities*, by which property possessing them are made more valuable, such as railways, steamboats, machinery, etc.

Now, in the case of the state of Ohio, we have data to distribute with tolerable accuracy, the respective shares due to these several modes of accumulation.

1. The surpluses of labor in the proceeds of agriculture and manufactures amount to about $50,000,000 per annnm.

2. The increased capital in houses (about 8,000 in number,) in live stock, fences, roads, etc., cannot be placed above $30,000,000 per annum.

3. For two years, these sums doubled make $160,000,000, (the above being estimated at the present high prices. It follows, then, that $140,000,000 of the increased values are due to railways and commercial machinery.. When we look to the increased valuation of Cincinnati, Cleveland, Columbus, Dayton, and other railway towns and counties, we cannot doubt that the increase is due to railways in fully that proportion. Deducting, however, some $40,000,000, as due to other forms of commercial machinery, as to introduced capital, we find $100,000,000 as due to railways. No intelligent man can examine the statistical data—officially furnished by the state of Ohio—and not arrive at this conclusion. But, on what amount of railway capital has this increased value been obtained? In these two years there have been finished, in round numbers, 1,000 miles of railway, the cost of constructing which may be assumed at $30,000,000.—Thirty millions of dollars then, placed in railways *have produced one hundred millions*, or seventy millions clear gain—233 per cent. on the original capital. All railways have not been as useful, and therefore we have assumed only 150 per cent. as the average gain. This, we think, after the facts stated above, will not be deemed too much.

The arrest of construction of railways to the extent of 1,000 miles per annum, below what we have estimated as legitimate and beneficial, will, it is true, diminish the demand for railway capital in the next five years, one hundred and fifty millions of dollars. This looks, *at first sight*, as if it would be a relief to the mercantile pressure. But look beyond this, to the *ultimate*. At the end of five years, the country will have THREE HUNDRED MILLIONS LESS POSITIVE CAPITAL, than if 5,000 miles of railway had been made; and the commercial interests will be injured far more, than any temporary benefit which may accrue.

But, let us now turn to what is perhaps the most important consideration in the whole case—*the change in the industry of the country.*

The tariff on iron is imposed to protect the American Industry. We have shown that in the case of railway iron, it has been of no benefit to the American manufacturer, while it has been a heavy burden on the railways.—Now, let us suppose that this burden combined with pecnniary pressure is great enough to arrest the progress of railways, what will happen? It must, to that extent, change the direction of industry. The laborers and mechanics on railways must go into other employments. Let us see to what extent this change must be made. In the past three years there have been made 3,000 miles of railway per annum. Suppose, then that 2,000 miles per annum are cut off, and the workmen seek other employments, what will be the effect?—Let us see how many will be discharged.—It is entirely safe to say, that averaging all classes of workmen, the cost of labor is $1 per day, and the working days not more than 300. We have then this result in the reduction of railway labor:

Cost of 2,000 miles of railway	$60,000,000
Deduct iron	15,000,000
Deduct ties, timber, etc.	5,000,000
Paid for labor	$40,000,000
Laborers employed	133,300
Population, adding 4 women, children, and infirm to each laborer	666,500

Striking off two-thirds the amount of railway construction will throw *six hundred and fifty thousand persons out of employment*, who must seek work wherever they can find it, and change their residence to whatever place they find as a home, and crowd into other vocations. How will this affect commerce and manufacture? Already the stoppage of some railways is producing most disastrous effects on the internal trade of the country. The village merchant has bought large supplies to trade with the workmen on a neighboring railroad. It has stopped. He loses some of his debts: he buys less goods, and the city jobber, in turn, finds his sales diminish; and finally, merchant, manufacturer and banker find themselves cramped. A portion of the industry of the country is *paralyzed*, and the activity of trade, capital and currency is soon paralyzed also.—As yet, the evil is but little felt; but if railway construction, in the main, be arrested, the vast change produced in the industry of the nation will prove disastrous to all classes of business. To estimate properly the result of throwing 600,000 people out of employment, let us take a measure of comparison. Lowell, Lawrence and Manchester, are three of the largest manufacturing towns in this country; but their entire population is only 65,000.—Now, arresting the construction of 2,000 miles of railway per annum, will be equivalent to throwing out of employment, *ten times the entire population of Lowell, Lawrence and Manchester!!*

But is there any class of interests to be benefitted by this operation? Not one. If the American iron manufacturer does not supply railway iron now, still less can he when no such iron is wanted. We come then, to this, that the arrest of railway construction to the extent of two-thirds the present annual amount will prove disastrous to all the interests of society, and to none more so than to commerce and manufacture, from which such an event will take a large part of both their capital and their activity.

In regard to the tax on railway iron we have proved by incontrovertible facts the following positions:

1. That the duty imposed by Government on imported railway iron, is a *real and heavy burden* on railway construction, amountiug at this time, to *near five millions per annum.*

2. That this tax *is not needed* for purposes of revenue; but on the contrary, the whole amount has actually been locked up in the Treasury, without expenditure and without interest.

3. That *it has not benefitted* the American manufacturer; but on the contrary, the importation of railway iron has rapidly increased.

4. That the arrest of railway construction, to the extent of two-thirds of the present annual amount, will leave the country, at the end of five years, with *three hundred millions less positive capital*, than it would otherwise have had.

5. That such an arrest of railway constrnction will require *six hundred and fifty thousand people* to find new employment, and thus prove disastrous to all the interests of society.

6. That so far then, as the government tax on railway iron tends to produce these results, it tends to injure the business and prosperity of the natiou.

Railroads.

MEMPHIS & CHARLESTON RAILROAD.

We are in receipt of "an Exhibit" of the affairs of this company up to May, 1854, from which we gather that the road is in a very forward state, and will be completed at the earliest possible moment. This is a flattering testimonial of the manner in which the financial affairs of this company have been conducted, in thus enabling it to progress, while so many similar undertakings have been compelled to suspend operations until the financial horizon shall present a less clouded aspect.

There are 108 miles of track already laid and in operation, viz:

Memphis to Lagrange,	60 miles.
Sommerville Branch	13 "
Decatur to Tuscumbia	43 "
Tuscumbia to Tenn. River	2 "
Total	108 "

The remainder of the line is all under contract, except the Mississippi portion of some 30 miles; much of the grading, masonry and bridging is completed and ready for the rail. The iron for the 83 miles in Alabama, from Decatur to Stephenson, the point of junction with the Chattanooga road, has been contracted for, and is looked for to arrive daily. The iron and equipment for the 43½ miles in Tennessee is to be provided for by the state, to the extent of $10,000 per mile, and $100,000 for bridging the Tennessee, thus there will be but little delay in putting a large part of the line in running order.

The iron is of the T pattern, 60 pounds to the yard. The cross-ties are of white-oak 9 to 10 inches face, and laid 27 inches from center to center; the masonry is of limestone rock, laid in the best manner. The whole work, as well as equipment, will be of the very best and improved kind.

The maximum grade is 47½ feet to the mile; the maximum curvature is four degrees; the number of curves being very few, the road being located mostly in tangents of from 10 to 16 miles each.

The right of way, 200 feet, depot grounds, water stations, etc., have been secured, mostly as donations, or at merely nominal prices.

The main line is 273½ miles, branches 15 miles, total 288½ miles. It crosses the Mobile and Ohio road 93½ miles east of Memphis, and the New Orleans and Great Northern at 123½ miles, and intersects the Nashville and Chattanooga road 38 miles west of Chattanooga, thus opening a direct Eastern route from the Mississippi river, by which numerous connections can be made by the various diverging lines.

The road is divided into two divisions, Eastern and Western, the Alabama state line being the center point,

The Eastern Division is estimated to cost	$2,489,199 86
Western Division	2,067,300 00
Total, 288½ miles	$4,556,499 86
Or, for construction, per mile	$13,795,00
" Fully equipped " "	15,795,00

The resources of the company are as follows:

City of Memphis	$500,000 00
" Charleston	500,000 00
" Huntsville	50,000 00
Madison county, Alabama	100,000 00
Individual subscription	1,656,538 18
State Aid, Tennessee,	935,000 00
	3,491,558 18
Proposed loan on Con. Bonds of the Co.	1,600,000 00
Total resource	5,190,551 18
Deduct estimated cost	4,556,499 86
Leaving surplus of	535,058 32

The road has been in operation between Memphis and Lagrange, 50 miles, and over the Sommerville Branch, 13 miles, for some nine months, earning within that time the sum of - - - - - - - $139,107 96

Expenses, - - - - - 58,425 34

Net earnings, - - - - $80,682 62

The cost of these 63 miles does not exceed $750,000, thus showing a profit of upwards of 13 per cent. per annum, upon the capital invested.

Railroad Earnings.

July, 1853--4.

EASTERN:

Name of Roads.	Miles.	1853.	1854.	Increase.	Per Cent
New York & Erie, - - -	460	$318,182 92	$414,344 35	$ 96,161 43	30.22
Baltimore & Ohio, - - -	380	164,140 42	270,214 10	106,073 68	64.62
Do do Wash. Br.	39	27,170 85	30,299 55	3,058 70	11.25
Pennsylvania Central, - -	353	157,244 90	209,299 87	52,054 97	33.10
Hudson River, - - - - -	143	121,584 29	135,153 39	13569 10	11.16
New York & New Haven, -	76	79,222 05	78,261 94	Decrease.	

WESTERN:

Name of Roads.	Miles.	1853.	1854.	Increase.	Per Cent.
Mich. So. & Nor. Ind. - -	247	$107,568 45	$120,421 45	$12,853 00	11.94
Michigan Central, - - -	278	103,542 09	123,382 19	19,840 10	19.15
Ohio & Pennsylvania, - -	187	56,728 01	75,626 07	18,898 06	33.30
Little Miami and Col. & Xenia	119	74,228 52	79,994 91	5,766 39	7.77
Galena & Chicago Union -	120	44,874 00	93,641 21	48,767 21	108.67
Cleveland & Pittsburgh, - -	101	34,373 08	36,643 81	2,270 73	6.60
Milwaukee & Mississippi, -	104	16,177 00	35,574 74	19,397 74	119.72

Earnings for June 1853–4, not before given.

Name of Roads.	Miles.	1853.	1854.	Increase.	Per Cent.
New York & Erie, - - - -	460	$336,018 00	$398,750 00	$62,731 00	18.66
Detroit & Pontiac - - -	25	5,407 00	6,418 00	1,011 00	18.70
Galena & Chicago Union, -	120	49,010 00	120,879 00	71,869 00	146.64
Stonington, - - - - -	50	21,244 00	20,966 00	Decrease.	
Kennebec & Portland, - -	60	12,176 00	17,700 00	5,524 00	45.36

Our Table of Earnings this month is very meagre, notwithstanding our utmost endeavors. From what we can collect, we find that the increase over last year is uniform and steady, and at this time, when railroads are so decried, presents the best possible evidence of the fact that railroads must and will pay good dividends, if properly managed.—The recent developments in the fraudulent management of railroads, will tend to induce more caution, and a closer scrutiny into their affairs, which, while it harms no one, will greatly benefit the stockholders.

Five Eastern roads, 1,375 miles, have increased over last year	150.35 pr. ct.
Or, per mile	10.90 "
Seven Western roads, 1,166 miles, have increased over last year	307.15 "
Or, per mile	26.57 "

This increase of the Western roads, so much in advance of the Eastern, is one of the best arguments we can have in favor of our assertion that more railways are needed. This large increase arises from the fact that many of the roads now complete, and running their entire length, or nearly so, were last year incomplete, and used only for a few miles. Each mile completed adds to the receipts in a very heavy ratio. In a great many sections of the country, where roads are expected to be completed within a short time to certain points, large quantities of freight are hauled to those points, awaiting such completion, and not unfrequently does it occur that the new roads have not the facilities for carrying it off at once; and where roads are thus needed, they must and will be built. The present stringency in monetary affairs, so far as relates to railroad securities, will have the effect to cause such roads to be built by means raised mostly at home, as they should be; then will the railroad system be healthy and prosperous, and profitable, also.

PACIFIC RAILROAD—SOUTHERN ROUTE.

The Texas *State Gazette*, city of Austin, of the 5th inst., announces the result of the bidding for the construction of the Pacific Railroad. It was awarded to Messrs. R. J. Walker, T. Butler King, and their fifteen associates of Texas.

The terms of the contract obligate the contractors to construct the Mississippi and Pacific Railroad from a point on the eastern boundary line of the State of Texas, not north of the town of Fulton, in the State of Arkansas, to a suitable point on the Rio Grande, at or near the town of El Paso; to cross the rivers Trinity, Brazos and Colorado, as near the 32d degree north latitude, as practicable; and this on the terms and conditions, and for the consideration expressed in the act of the State of Texas, passed for that purpose, and approved December 21st, 1853.—They agree to commence the work within thirty days after the execution of the contract, in case it may be awarded to them, to furnish and place in running order fifty miles of said road within eighteen months from the date of said contract, and to furnish and place in like order one hundred miles of said road each and every year thereafter, until the whole shall become completed, of the first class of railroads; and they have deposited in the Treasury of the State of Texas, par stocks to the amount of three hundred thousand dollars, to be forfeited in case fifty miles of the road shall not be completed within eighteen months from the date of the contract.

The New Orleans *Delta* states that there are now upwards of three hundred hands engaged on the work in Texas, and that before the expiration of ninety days, the number will exceed one thousand. Among the Texans associated with Messrs. Walker & King, is Mr. Maverick, of San Antonio, who is said to be the largest landholder in the world, and by far the wealthiest citizen of Texas, and no less distinguished for his patriotism, and high character and integrity than for his large means.

Pittsburg and Steubenville Railroad.—We extract from the Pittsburg *Commercial Journal* a paragraph relative to the Steubenville and Indiana Railroad, which will be interesting to our readers:

This important work is now almost completed—the grading, except upon three sections, is finished, and the iron is now laid on 80 miles, leaving but 35 miles of track laying to close up the entire line, which is going on rapidly. We understand the Company have sufficient means to push it forward to completion, and learn from reliable authority that their financial agents, Messrs. Robert Garrett & Sons, of Baltimore have lately effected sales of two hundred thousand dollars of their bonds in Europe. This speaks well for the credit of the road, both at home and abroad. The Steubenville and Indiana road will unquestionably be the extension through Ohio and the West for the great roads centering in Pittsburg, affording the shortest outlet, and over which no western road can make better time.

THE RESOURCES OF NEW JERSEY.

The iron of this state has attained a world-wide celebrity, and is acknowledged to be the best, in many respects, that has been discovered. The geological survey, which has recently been commenced, will undoubtedly reveal resources of equal excellence. A very valuable deposit, as we announced a few days since has already been found in Sussex county, and rich marls probably exist throughout the state. In the iron and zinc regions new minerals will perhaps be developed, and possibly other metals discovered, which will be the means of employment and wealth to many.

About a year and a half since, some persons in searching at West Milford, Passaic county, for iron, came across a bed of clay, with the nature of which they were unacquainted. Until recently is has not been improved, on account of ignorance of its value; but a scientific investigation has revealed the fact that it is Kaolin, an exceedingly valuable porcelain clay, which is quite scarce. It can be used in the manufacture of porcelain ware, tiles, fire brick, the glazing of cards, soap, paint, &c. The deposit at West Milford is of the purest kind; it is of various colors, white, red, chocolate and others.

The porcelain manufactured from it will be equal, it is thought, to the best French. The deposit is large, and a company of capitalists is about to be formed, under the name of "Mackapin Kaolin Company," to work it. Similar deposits exist in Japan, China, Saxony, France, England, one at Amboy, discovered by the former geological survey, and one of an inferior kind near Philadelphia. The composition of the clay is alumina and silica, and it is generally formed from disintegrated granite. Many gratifying results, similar to this will certainly be accomplished by a thorough exploratioa of the resources of our State.—*Newark Adrertiser.*

Galveston and Henderson R. R. Co.—Capt. Thos. D. Chapman arrived on Saturday from New York, by the ship Fannin.—We understand he comes as the agent of the Galveston, Houston and Henderson Railroad Company, and will exercise a general superintendence over this road, making his residence in this city. Capt. Chapman will suspend the work upon the road until the weather becomes cooler, when the road will be vigorously prosecuted to completion. His first object will be to examine this bay, and ascertain the best place and method of connecting the island with the main land. The high character we have heard of Capt. Chapman gives us increased confidence in this important enterprize.—*Galv. News, 25th.*

The State *Gazette* says: "On the first of this month, according to the terms of the loan negotiated in England, by Col. Lacey, an installmentof $100,000 was to have been paid in New York, and this amount continued each month until the whole sum of three millions of dollars is paid to the company, in consideration of the transfer of the company's bonds for that amount. The Editor adds:

Should the amount come to hand, it may be probable that the people of Houston will see the railroad at that place by next July, as formerly intimated. We understand tbat the contractors for laying the rails from Virginia Point across the bay to Galveston, will commence the work this fall, and will most likely either construct a dyke or lay the rail upon an iron frame work. The company are said to have sufficient means to construct the road to Houston without falling back upon the English loan. Much of the Virginia Point is a low, wet prairie, and owing to heavy rains the past season, the work has been very seriously retarded."

The Steam Excavator.—The Marietta *Intelligencer* says: "The Steam Excavator now, and for several weeks past at work on the M. & C. Railroad, about four miles above town—a short distance over little Muskingum—is worth a day's journey to see.

"We saw it for the first time on Friday last, and for the first time took a ride on the Marietta and Cincinnati Railroad in Marietta township. The locomotive takes from twelve to fifteen cars each trip, and makes from 36 to 40 trips per day. The distance from "the pit" to "the dump" is now something over a mile.

We shall not undertake to give a description of the excavator, for we could not, if we had ample time, give half so good an idea of it as can be obtained by a single glance, when it is in operation. We may, however, state, that the machine cost Messrs. Richmond, Nichols & Co.,—(the contractors upon the division extending from Marietta nearly forty miles towards Wheeling.)—$7.200. It was an invention of a yankee (of course,) named Carmichael, now deceased. The patent is now owned by O. S. Chapman.

"The *shovel* holds 1 1-2 yards, and discharges itself into the cars twice a minute. In other words, two motions of the shovel, occupying one minute's time, fill each car—containing three yards of earth.

"There are, of course, occasional interruptions, in the starting and return of the trains, &c.; but, with this single shovel, and with one locomotive to haul the train of dirt cars, an average of more than 1200 yards of earth is shoveled up, carried more than a mile, and placed into an embankment, each day.

Fremont & Indiana R. R.—In reference to the work on this line of road, the Fremont *Democrat* of the 25th inst., says: "The whole force of the company, (about 400 men,) is now employed on the line of the road between Findlay and Lima. The work goes steadily along, notwithstanding the almost insufferably hot weather. The whole line to Union, Indiana, the south-western terminus of the road, has for some time been under contract."

NOVEL TICKET PRINTING APPARATUS FOR RAILROAD COMPANIES.

The *New York Journal of Commerce* says: "A very ingeniously constructed machine for printing and numbering the tickets used in passenger trains, with great rapidity and perfect accuracy, and which is in use in connection with the principal railway lines in Europe, has just been brought to this city from London, with a view to its introduction here. It has been placed in the office of the New Haven Railroad Company, and its adoption is a matter pending the action of the Directors.—It is worked by hand and is capable of completing 200 tickets per minute. It is notorious that under the present ticket system, it is morally impossible to insure perfect accuracy in their management, and constant losses are incurred by stockholders, in consequence.—The advantages incurred by this machine are calculated to remove this difficulty and save much labor, as a few minutes suffice to prepare a sufficient quantity of tickets for any given day, and the last ticket from this machine invariably bears on its face figures indicating the precise number that has been issued; and the lettering affords a safegaurd against the perpetration of fraud. In addition to this apparatus, is a small but curiously constructed stamping machine, for instantly printing the date on the tickets as they are issued, by which great facilities for booking passengers are afforded. The apparatus may be made to suit any extent of traffic, or number of stations on a railway. It is termed, "Thomas Edmondson's Patent Apparatus," and Mr. Hamlet Rothwell is the agent for the United States. Should this system be adopted here, and we are assured that there is no doubt but that it will, a radical change will be effected in this important department of railway management."

Mad River & Lake Erie Railroad Company.—The stockholders of the Mad River and Lake Erie Railroad elected the following Board of Directors at their meeting in Sandusky on the 17th inst.

E. F. Osborn, Sandusky; Samuel Henshaw, Henry Timmings, Boston; David A. Neal, B. F. Chamberlain, Salem, Mass; J. P. Yelverton, New York; M. P. Sawyer, Boston; William Hunt, Fremont, O.; S. C. Parkhurst, Cincinnati; E. Lane, Sandusky.

The State Directors are—R. E. Runkle, West Liberty; E. Smith, Dayton; John Ewing, Findlay.

At a meeting of the new Board of Directors, E. F. Osborn, Esq., was elected President.

The annual report of the operations of the company has not yet been published.

McMinnville & Manchester Railroad.—The McMinnville *Enterprize* says, that the entire bridge masonry on the McMinnville and Manchester Railroad, has been let to Messrs. Saulpaw & Bro.

RAILROAD STATION HOUSES.

We know of nothing connected with railroads generally, wherein the comfort and convenience of the passenger is less consulted and cared for, than in the supply of station houses along the line of these roads. At the majority of stopping places there are no houses of any kind, for the shelter of those awaiting the arrival of the cars, leaving them exposed to the scorching rays of the summer sun, or the peltings of the storm; while, with a few exceptions, where there are such accommodations, they are set out in the sun without a shade-tree in the neighborhood, and are usually, anything but cleanly and inviting, being, in most instances, the loafing place of the idle in the vicinity, much to the annoyance of travelers, especially when there are ladies in the number.

This should not be so; the greater portion of these discomforts could be readily avoided by a little more care on the part of those in authority. It is not so upon European roads; and while they can learn very many things of us in the management of railroads, we can quite as advantageously take a lesson from them in this respect. In Mrs. Stowe's recent work, "Sunny Memories of Foreign Lands," we find the following description of a station house at Wittenberg, Germany. We commend an attentive perusal of it to our railroad Directors, and hope that they may be induced to go and do likewise. Mrs. Stowe says:

"Arrived at the station, we found we must wait till half-past five in the afternoon for the train. This would have been an intolerable doom in the disconsolate precincts of an English or an American station, but not in a German one. As usual, this had a charming garden, laid out with exquisite taste, and all glowing and fragrant with plats of verbena, and fuschias, heliotropes, mignonette, pansies, while rows of hothouse flowers, set under the shelter of neatly trimmed hedges, gave brightness to the scene. Among all these pretty grounds were seats and walks, and a gardner, with his dear pipe in his mouth, was moving about, watering his dear flowers, thus combining the two delights of a German, flowers and smoke. * * * *

The station room was an agreeable one, painted prettily in frescoes, with two sofas.—So we arranged ourselves in a party. S. and I betook ourselves to our embroidery, and C. read aloud to us, or tried the Amati, and when we were tired of reading and music we strolled in the garden and I wrote to you.

I wonder why we Anglo-Saxons cannot imitate the liberality of the continent in the matter of railroad stations, and give the traveler something more agreeable than the grim, bare, forbidding places, which now obtain in England and America.

Wabash Valley Railroad.—The first ground was broken on the Valley Road, immediately below Palestine, Ills., on Wednesday, the 16th inst. The first shovel full of earth was removed by the Chief Engineer, Mr. Summers, amid the firing of cannon and the huzzahs of a large concourse of the citizens of Crawford county.

STEUBENVILLE & INDIANA RAILROAD.

The Steubenville and Indiana Railroad, (says the *Steubenville Herald*,) is much nigher completion to Newark than is generally supposed by our citizens, or the public. The road when completed to that point, will connect with the Central road leading to Columbus, Cincinnati, Cleveland, etc.

A gentleman employed on the road, and who has just returned from an excursion over the entire distance, informs us, that from three miles west of Urichville, the track is laid to Coshocton, a distance of thirty-one miles.—The grading between Coshocton and Newark is entirely finished—a distance of thirty-six miles.

The chief cause of delay will be the big tunnel at Mastersville, which the contractors are confident of being able to see day-light through within a month; when this is accomplished the balance of the road will be complete and a connection between Steubenville and Newark, a distance of one hundred and fourteen miles, in running order.

This is cheering news and should encourage the Steubenville and Pittsburgh Company to renewed energy. When this is made, we shall have the most desirable route between the East and the West of which the country can boast.

Railroad Celebration in Germany.—The directors and principal administrators of all the German railways, have recently held a grand congress at Baden, to deliberate on affairs of locomotion. At a banquet served in honor of this congress, the guests, to the number of one hundred and thirty-seven, were seated at a long table, which, by ingenious allegory, represented a railway with a double track. At a signal given immediately after the soup, a locomotive appeared upon the table, to which was attached a train loaded with dishes of the choicest and most solid food.—The succulent train advanced slowly, an imitation of the passenger trains upon all German roads. After having made the tour of the table without stopping, in order to give a view of the good things with which it was freighted, the train again started, making a station in front of each guest, and permitting him to fill his plate according to his appetite and fancy. The trains followed each other in constant succession for two or three hours, departing each time well loaded with comestibles, and always returning empty to the depot. The dinner was as magnificent as it was copious, and gave a favorable idea of the culinary art in Germany.

South-Western Railroad of Georgia.—The South-western Railroad Company has declared a dividend of *four dollars per share*, from the business of the company for the past six months.

NASHVILLE AND HENDERSON RAILROAD.

We give the following as news of the day; hut trust most sincerely that the *opinion* of the Springfield Intelligencer will not prove to he the fact. This road has been under way some time, and we rather expected to hear of its final completion than of its abandonment thus. We give the item for what it may be worth.

A meeting of the Board of Directors of this road was held iu this city last week, at which it was resolved to locate the road from Edgefield through Goodlettsville to Springfield in Rohertson county, and that a call of eight per cent, be made upon the stock, payahle in monthly instalment of two per cent.

The Springfield *Intelligencer*, in noticing the above, remarks as follows: "This sounds very encouraging, but we doubt very much if the "take in" will be successful. What advantage, we ask, can be derived from locating and working on the road hetween this place and Edgefield, when the work has been entirely suspended on the Kentucky side, and no prospect of a re-commencement. The stockholders here have expressed themselves determined not to pay any part of their subscription, until they are fully convinced of the ahility of the Kentucky side to build their part of the road. We are of opinion that the the work will be discontinued, as soon as a sufficient amount is received to pay the engineers, surveyors, &c., for what they have already done:"—*Nash. Whig.*

Sunbury & Erie Railroad, and the City of Philadelphia.—One branch of the Council has appointed a joint special committee of five persons to inquire as to whether the second installment, due on the 1st of August, on the subscriptions of Mr. Crane and others, to the Sunbury and Erie Railroad has been paid; and also to report the present condition of the city subscription to said railroad. We hope the committee will make a thorough investigation of the matter, and publish the facts as well as the conclusions hased upon them, when they make their report. Since recent events have called puhlic attention to this subject, it may not be amiss to refresh the public recollection with the names and amounts of the additional subscriptions upon which the city subscription was made. It is extracted from the report of the annual meeting of the Board of directors of the Sunhury and Erie Railroad. Mr. Cooper stated that the following subscriptions had heen received hy him: Choteau, Sanford & Co., $500,000; Mr. Goodwin, $50,000; Joel White, $50,000; Edward Crane, $900,000; District of Richmond, $250,000; in the hands of the Committee, say, $200,000. Total, $1,950,000.—*Philadelphia Ledger, August* 12.

Dayton and Michigan Railroan.— It will be recollected that some time since the directors of this road determined to avoid Sydney, and take what was known as the Turtle creek route, which is considerably shorter and more easily constructed than the former route. They were prevailed upon, however, to change this determination and pass through Sydney, by the agreement of Mr. Carey, to construct the line through that place, and take the Shelby county subscriptions. Mr. Carey has failed to comply with his contract, and it appears that the former controversy about the two interests is about to be again revived.—*Hancock Cour.*

Vermont Central Railroad.—At a meeting of the stockholders of the Vermont Central Railroad, held on Friday afternoon in Cochituate Hall, Henry W. Pickering, Esq., of Boston, in the chair, the following vote was unanimously passed:

Voted—That a committee of six he appointed to select suitable persons for Directors of the Vermont Central Railroad Company, to be voted for at the annual meeting, Sept. 12, and that this committee report a list at an adjourned day (previous to the annual meeting), at Cochituate Hall, at such times as they may elect.

The committee was appointed hy the chair and consisted of Messrs. Joseph Bradlee, H. H. Hunnewell, George M. Dexter, G. O. Hovey, Andrew T. Hall, and G. A. Whitney.—It was also voted that at the adjourned meeting the committee report a list of the present stockholders. The following is a summary of the receipts and expenses of the road for the year ending June 30:—Earnings, $829,119 60; expenses, $605,326 48. Thus the earnings exceeded the expenses hy $214,793 12.—*Vermont Paper.*

Eastern Railroad Company.—The Boston *Courier* says: "The Directors of the Eastern Railroad Company will offer to the stockholders the honds of the Company, ($100 for $80 paid in,) each in proportion to the stock they may own, five shares heing entitled to a $100 hond, and with a guarantee that they will, under no circumstances, make a sale of their honds at a lower rate, without making to any person, who may take those now offered, an allowance on each that will equal the difference. The bonds will he issued in sums of $100, $500, $1000. The honds are payable in twenty years from August 1, 1854, and bear interest payahle semiannually at six per cent."

A New Style of Bricks.—Amongst the more recent inventions patented by English manufacturers perhaps the most important aud interesting is that hy Mr. Summerfield, of the Glass Works, Birmingham Heath, for what are termed chromatic glass, or glass-faced grooved bricks. It has already attracted the attention of several eminent architects and huilders, and there is little doubt this new description of hrick will come into extensive use. By Mr. Summerfield's process, red or other clay can he combined with glass, and this will secure durahility, entire resistance to moisture, and give an ornamental appearance to the building. The form of the hrick is also, by means of a groove at the side and end, made so as to add greatly to the strength of the erection, the joints by this means heing brought nearly close together, forming a neat exterior, and the morter acts as a wedge, from the shape of the groove.

Railroads of Pennsylvania Suspending further New Work.—The *Philadelphia North American* says: "The Finance Committee of the Pennsylvania Railroad Company have determined, as far as practicable, to sdspend, for the present, all further contracts for new codstruction work; and there is a good reason to helieve that the Directors of the North Pennsylvania Railroad Company, at their next meeting, will adopt the same policy.—This course having heen already adopted by the Reading Railroad Company, those three great corporations will cease to he competitors against our merchants for the purchase of money, inducing thereby the most exorhitant rates; and if their example should be followed hy all other improvement companies, and husiness men generally would adopt a system of rigid curtailment the community here would soon he relieved from the pressure which now prevails."

Spartanburg and Union Railroad.—The stockholders of the Spartanhurg and Union Railroad met in Union Court House, on Wednesday last, for the purpose of electing a President and Directors, and attending to the other interests and business of the company. In the forenoon resolutions were passed complimentary to Col. Cannon, the former President, and the afternoon was consumed in discussing the mauner of giving validity to proxies.—The meeting then adjourned till ten o'clock Thursday morning, at which time they met went into an election for President and Directors which resulted as follows:

President, Hon. D. Wallace; Directors—T. M. Lyles, J. S. Sims, J. M. Gadberry, J. Jeter, James Gilliam, J. Winsmith, Simpson Boho, G. Candon, T. L. Hutchinson, S. N. Evans, J. H. Carson, T. B. Jeter.—*Charleston Mercury, 16th.*

Velocity of the Wind.—Prof. Stoddard in a lecture recently delivered upon the hurricane in Knox county, Ohio, stated that in one town a grove of oak trees was almost entirely blown down. The trunk of one of these was about three feet in diameter. Assuming, however, its diameter to he hut two-and-a-half feet, a force of 147,000 pounds would he required to hreak it. The surface of the tree exposed to the action of the wind was ahout 1,000 feet, which would give a pressure by the wind of 147 pounds per square foot, or a velocity of not less than 171 miles per hour, which is nearly one-fourth the initial velocity of a cannon ball. Allowing the hight of the hurricane, or whirlwind, to have been sixty feet, the whole force exerted at one time along its track was equal to more than half the steam power of the globe.

Madison, Indianapolis and Peru Railroad.—J. O. D. Lilley has heen appointed Superintendant of this Company in place of Mr. Hurd, resigned—and W. N. Jackson, Esq., has been elected Secretary.

MONETARY.

Since our last issue we find no material change in money rates at the East. Money is still abundant for good names, at 10 @ 12 per cent., while call loans on undoubted security can be had at 6 @ 7 per cent.

Foreign Exchange is quite active and fully up to former quotations, viz: 109¾.

The Stock Market during the past week has been very unsettled; prices having fallen very much. The losses sustained upon stocks within a year have been immense. The New York Economist gives the amount lost upon six stocks and three bonds only, at $26,000,000. Without including the over issues of New York and New Haven, or Harlem Bonds, or the Parker Vein Co., these, and some of the coal mines included, would swell the sum to upwards of $100,000,000.

Erie Railroad has got into difficulty in regard to a loan of $600,000, which had been counted upon to meet floating debts, &c. The failure of Mr. H. Sheldon, caused the breaking off of the negotiation. A new arrangement is on foot but not yet consummated. In the mean time the stock of the road has been down to 33c.

A meeting of the Directors was held on the 22d ult., when they resolved to issue new mortgage bonds, redeemable in four payments at one, two, three and five years date bearing the usual interest in exchange for the income bonds due and payable on the 1st February.

The Books of the Harlem Railroad Co., were duly opened on the 22d, and a large amount of stock transferred including that fraudulently issued. The new Certificates are made to run in the name of the U. S. Trust Company, who certify on their responsibility, that such and such parties are holders of so much stock. The new Certificates are only given on the day after the transfer is made and the old Certificates are given up.

The Sales at the Stock Board during the past week exhibit about the same amount of transfers, but at a declinc of prices, about the middle of the week, and slight increase towards the end.

The sales of the week at auction have been as follows;

By A. H. Nicolay, Aug 21st—

At the West we have to note money abundant, on undoubted security; on second hand paper it is difficult to be had, while upon Railroad securities, it cannot be had unless upon such terms that a couple of operations would swallow up the original capital. We quote rates at 10@12 per cent. for Num. One Commercial paper; 15@18 per cent. for less known. Eastern Exchange is furnished by two houses, in small quantities, at ¾ premium for current funds. Mixed currency pays 1¾ premium.

The Stock sales are merely nominal, and present no fair criterion of the market.

The small note law is a subject attracting much attention, and one, now that the law is a fixed fact, that requires careful and judicious management. Whatever may be our opinion as to the wisdom and expediency of the course pursued by our legislators, there remains to the law abiding citizen of Ohio no alternative but to do the best he can under the stringent prohibitions and penalties of the law. The experiment is one which has been tried elsewhere, and we doubt not that experience and expediency alone will determine its period of existence.

Having received several communications from personal friends, indicating the tone of feeling among the bankers of our neighboring states, we append a few extracts from a private letter.

Dear Sir:—What is the matter with the Cincinnati Daily Papers? they keep up a continuous warfare upon the free banks of this state. Do you think our bank is deserving of the name of a "Begus Bank."

What can the Gazette or any leading paper in your city profit by eternally arraying themselves against an interest that is so *important* to the *trade* and *prosperity* of Cincinnati. We lend money to merchants and others to go to your city to buy goods, and to pay their debts, long in advance of their being able to collect of their customers, and for this we are abused. She forgets that she has a large number of patrons, and *they will not sit quietly under her lash*, for the destruction or abuse of one interest affects more or less every other.

Are the products or trade of Indiana of any worth to your city? Why then array the discordant elements of a sister state against you, thereby making desolation more desolate.

If there is any evil in the banking system of this state, or if the privileges of the general banking law are being abused, it is by the citizens of Ohio. They use this law by setting up a bank in this state, only for redemption, and take their money into Ohio to do business upon. These are facts, and such abuses should not be charged upon the banks of this state.

For ourselves, we see no reason why the notes of the Indiana banks should be discredited here or elsewhere, being satisfied from our own information, that the security offered to the bill-holder is ample.

We believe that the notes of every institution doing a

legitimate banking business, will be redeemed without loss to the holder.

The necessity of throwing out of circulation the notes of a less denomination than ten dollars, consequent upon the action of our legislature, renders it necessary that the movements of our bankers and brokers should be of the most wise and temperate character, and in making the change in our circulation, we would not advise the holders of even small notes to make a sacrifice upon their value.

We look with much confidence to a meeting of the Indiana Bankers to provide a remedy against some of the evils which might result from a hasty change of currency. We regret to perceive indications of feeling on the part of Indiana papers towards our city, and trust that they will not consider a few individuals, engaged in monied operations, as the whole of Cincinnati—our monied and business community generally, are right, and it is only the necessity of complying with the provisions of a law that places them in a wrong point of view before those unacquainted with the peculiar circumstances of our city.

Miscellaneous.

RAILWAY SKETCHES.

The *New York Courier and Enquirer* has, for a few issues past, contained some excellent articles upon railway matters, under the name of *Railway Sketches*. Below we give the third one.

A week or two since, on one of the great roads in our State while the switch tender, whose house was at the extremity of a bridge on the track, was at dinner, his little boy mentioned to him that the bridge "did'nt look right." He glanced at it, and the precise angle seemed swerved. He went to it, and found that the timber beneath had broken.—This quickness of observation on the part of the boy saved the company a fearful loss, and the accident columns of the press a sad item. By an impropriety of movement, against the occurrence of which guard should have been taken, two heavy trains had been driven over it in different directions at the same time, and the timbers just equal to the task of bringing both over safely, expended all their energies in that. The load once over, the fibres of the wood yielded, and the next roll over would have been to ruin. There was no time for long delay at that dinner. The trains would be rolling along at their precise minute, and the engineer not think of checking his speed for switch or bridge. But signals given, and track master summoned, and a busy "gang of hands" immediately at work, and by the force of abundant and well directed labor, the transit was soon safely made.

It was one of the great number of escapes from danger which the annals of management of a railway train are continually furnishing—and the occurrence of which quicken to intensity the sagacity of those whose vocation it is to see that neither wood nor iron falter in their duty.

I have been told by an engineer that after a hard day's service in winter, in endeavoring to force the locomotive through snow, or other work where his labor was far prolonged, he has fallen asleep on his engine! He said his mind did not sleep. The running of the train never left his thought; nor did the recurrence of the proper stoppages escape him. He would awake to give the signal, but would, as soon as the roll of the wheel re-commenced, yield to tired humanity's great restorer. His fireman would vigorously throw in the wood, then set himself up on the box, and be asleep in a time so brief that that part of his experience, at least, many of us might envy. This place of slumber, it is to be hoped, is not often chosen; for while attaching all credit to the belief that my engineer friend was mentally awake, the dream of duty might soon pass away beneath the deep oblivion of exhausted nature.

The switch, in this railway day, is far more a terror to manhood than in the severest days of old fashioned semi-savage schoolmaster, its namesake, was to the offender. It is, the minute before the locomotive comes in sight of that white and black signal board, whose position at once indicates whether the rail is in perfect line by the proper and accurate set of the switch; it is at this moment that the heart of the engineer sinks within him. In our comfortable seats we hear a click extraordinary, as our car goes over the place, and perhaps the jar flings some pretty neighbor for an instant into our arms. To us the passage of the switch is rather agreeable, a rose leaf of incident suddenly thrown across our dreariness, but the glance at the signal reveals to the engineer either safety or a terrible leap for life, if indeed, this faint chance even is given him.

If set wrong, it is an error, a terrible error not then to be amended. The strength of fearful motion is in the engine, and perhaps it may not be safe even to whistle for the brake, as it could not bring the locomotive up, and the sound would only call the brakemen to most imminent peril, on the platforms.—Men have talked about self-acting switches, but an engineer who realizes wisely what a climate is ours, with its contractions and expansions by frost and scorching sun, would never move his engine beyond a cat's walking pace, up to a switch, the safety of which depended on a spring or a cog. It is said to be bad to be a one-idead man, but that character is precisely the one valuable and reliable, in the responsihle duty of attending the switch. One of our lively Americans would be planning in the interval all manner of improvements in locomotion, and day and night rouse to his routine only when the engine is upon him. The duty is performed but at intervals in the day. Long hours of leisure intervene, but at the minute—morn or midnight—he must be there. If he be not, desolation and disaster will be.

The Harlem Railroad.—The recent meeting of the stockholders of the Harlem Railroad Company was largely attended. The New York Times, alluding to the proceedings, says: "The feeling that it was proper for the company to assume the over-issue made by Kyle finally prevailed, and a resolution was accordingly adopted, to retire such of the stock as has been fraudulently issued. This action of the stockholders will tend to restore confidence, after the panic which has affected business relations to so serious an extent.—The shareholders refused to pass a resolution of censure upon the managment of the road, so far as regarded expenses. General Sanford appeared in behalf of the Directors. A Committee was appointed to select a new board from the owners of stock. The committee consists of Messrs. W. V. Brady, Thomas Tabor, Floyd Smith, Edward G. Faile, and Abijah Morgan. A clear majority of the stockholders was present."

Rail Road Printing.

We ask the attention of Railroad men to our facilities for doing every variety of Printing needed or used by Railroads. We have taken especial pains to fit up our establishment with reference to this branch of business.

Reports, with or without maps or illustrative engravings, will be gotten up at short notice and in superior style.

Blanks of any description, adapted to the wants of the different departments of Railroad business, and to the wishes and tastes of parties, will be prepared in a style warranted to give satisfaction.

Blank Books, with or without printed headings, ruled to any pattern. Day Books, Ledgers, and every vaaiety of Blank Books, made to order.

JAMES FOSTER, Jr.,

MATHEMATICAL AND PHILOSOPHICAL

INSTRUMENT MAKER!

Having removed from his old stand to south-west corner of Fifth and Race street, and increased his facilities for making instruments, is now ready to supply Levels, Transits, Theodolites, the Dumpy or Gravatt Level, Circular Protractors of Troughton & Simms model, Surveyors Compasses, Pocket Compasses with and without sights, in great variety. All kinds of Land Chains; Ivory and Box wood Scales of all kinds and graduation; Drawing instruments of all kinds, brass and German silver. Measuring tapes of all kinds, Magnets, Magnifyers, Barometers, Spy Glasses, &c., &c. Repairing promptly attended to. ap.6-6*.

DENNEY'S DIVIDED CAR AXLE,

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it can be refilled, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agen of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality.

Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations. This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils,-10 casks, assorted weights n w in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to

WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York,

And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

J. B. FORD is the Company's Receiving Agent at Wheeling.

THIS RAIL, which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a

THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are—a saving in the wear and tear of Machinery—it saves, to a great extent, in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable Being practically a continuous Rail for the entire length of the road, without break at the ends of bars, the jarring motion communicated thereby in passing over the common 'T" Rail is avoided, as is also its effects upon Cars and Machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at Hanging Rock Iron Works, upon the Ohio River, and at Mt. Savage Iron Works, Maryland. Specimens of the Rail and patterns of the same will be gladly shown, as well as information in relation thereto, given by application to

WHEELBARROWS!

ON hand, Wheelbarrows, of my own manufacture, suitable for Railroad, Turnpike, Canaling, etc., in sets to suit purchasers. Orders filled for any reasonable amount.

HENRY RCCKEY,
jy. 20. No. 21 East Front st.

CAR MANUFACTORY,
Dayton, Ohio.

E. THRESHER & CO., having enlarged their shops, are prepared to contract on favorable terms, for building every variety of railroad Cars, in any quantity and on short notice, made of the best materials, and of the most approved workmanship.

They are prepared also to furnish jaws and boxes; the Washburn Wheel, 30 and 33 inch, adapted to inside or outside bearing; cast iron frogs, steel plated; and switches of the most approved patterns.

They also manufacture blacksmith tuyeres, Harris' Patent; portable bolt forges: bolt heading and bolt cutting machines; upright drills, wheel presses; wood planers; tenoning and mortising machines, etc.

They respectfully invite the attention of railroad directors and superintendents to their establishment.

KENTUCKY LOCOMOTIVE WORKS.

CORNER OF KENTUCKY AND TENTH STS.

LOUISVILLE, KY.

THE Proprietors of the Kentucky Locomotive Works would respectfully inform Railroad Companies and the public generally that, having completed their establishment, they are now prepared to receive and execute orders with fidelity and dispatch.

They will contract for

Locomotives, Passenger, Baggage, Freight, Gravel and Hand Cars,

Of every style and pattern, as well as all kinds of St and Machinery required for railroads.

Particular attention will be paid to repairing, which they have every facility.

They are also prepared to contract on favorable terms for building all kinds of Machine Tools, such as Turning Engines, Lathes, Planers, Drills, Slotting, Spliting, and Shaping Machines, of every variety of pattern.

Having also a large FOUNDRY connected with the establishment, orders for Castings are solicited, and will be filled with promptness.

Car Wheels of any pattern can be furnished on short notice. Double and single plate and Spoke Wheels of all sizes constantly on hand.

☞ Communications or orders must be addressed to

OLMSTED, TENNYS & PECK,

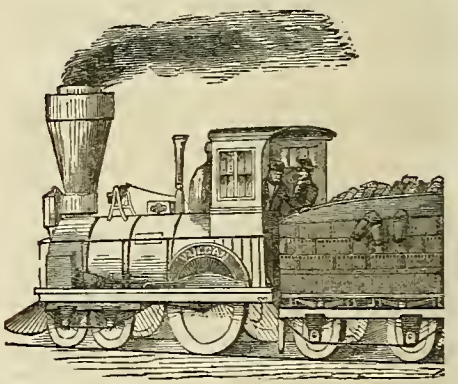
Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Reservoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.



The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,
PRINCIPAL AGENT,
May 18.6* Office, No. 167 Broadway, New York.

Cincinnati Locomotive Works!

THE undersigned are prepared to furnish Locomotives equal in efficiency and durability to the best Eastern manufactnre. Also, Shaping and Slotting Machines suitable for railroad shops. Also, all kinds of heavy forging and casting done at short notice. Also, bolts for bridges cut with dispatch.

A New Press.—Mr. Stephen Brown, of this city, has invented a useful and very ingenious printing press for the printing of four different colors simultaneously. We went to his room the other day and examined a neatly constructed brass model of this press, which is indeed a perfect beauty to look at, and a curiosity to see in operation. The inking apparatus and the general principles of the machine are so arranged that four colors can be printed at one impression, at the rate of about 500 impressions in an hour. And not only different lines and letters be printed in various hues, but so perfect is the invention that one letter may be printed in two, three, or four different colors ; or printed in one color and shaded by another, all with the same impression.

Its construction is very simple, there being less of complication about it than we find in other larger printing presses now in use.

Mr. Brown is a practical printer and has spent considerable time and labor in getting up this new press. He intends to make application for a patent immediately. That his labor and ingenuity will be rewarded as they deserve to be, we have no doubt. His invention will "take," being one much to be desired by printers.—*Syracuse Journal,*

Louisville & Nashville Railroad Co.—L. L. Shreve, Esq., has resigned the presidency of this company.

OPINION OF CORWINE, HAYES AND ROGERS, on the Constitutionality and Validity of "An Act to Prohibit the Circulation of Foreign Bank Bills of a less Denomination than Ten Dollars," Passed by the General Assembly of the State of Ohio, May 1st, 1854.

The Small Note Law of our State being a subject of the highest importance to our Mercantile and Railroad interests, we subjoin the opinion of an eminent law firm in this city, given at the request of our bankers. For want of space we are compelled to reserve our own remarks for a future issue.

OPINION:

This Law contains six sections ; the last, however, being merely the repealing clause.

Sec. 1st, Prohibits the circulation and receipt of Bank Paper of another state, of less denomination than ten dollars, after the 1st of October, 1854, by any person, firm or body corporate, unless transferred and received *bona fide* for the purpose of sending *out* of the state for redemption.

Sec. 2d Provides that such paper shall not be paid out or received in payment of any tax, debt, judgment, decree, fine or amercement, or other demand whatever; that such paper shall be held worthless, and all contracts for it null and void, &c.

Sec. 3d, That for a violation of it, any Bank, Banker, Broker, body corporate or public officer, shall pay one hundred dollars, and *other persons* ten dollars ; one-half to go to the *informer*, and the other half to the Treasurer of the Township. And the person complaining, (the informer) shall not, after the filing of such complaint, be liable to a forfeiture in the same case, *although a party to the same offense.*

Sec. 4. The form of the complaint.

Sec. 5, In addition to the forfeiture above specified, makes every member of the firm, bank, &c., individually liable for the redemption of such paper in gold and silver, every incorporated bank shall forfeit its charter, and all notes and other securities or obligations, discounted in whole or in part by any bank, banker or broker, with or by paying the unlawful paper, the circulation of which is by this act prohibited, shall be void, and no action shall be maintained to enforce the collection thereof.

The first section contains two distinct and opposite elements. 1st. It prohibits the passing of any bank bill or note of a less denomination than ten dollars.—But, 2d. It authorizes bank bills to be dealt in, provided it is done for the purpose of sending such bills home for redemption.

These provisions are antagonistic. In the first place the prohibition is complete and positive against the passing, transferring and circulating ; and in the second place, they may be purchased to be sent home.

Now, it is clear that if there is a *purchase* there must be a *passing* by some one, where there is a seller there is a purchaser.

The seller violates the law, whilst the purchaser is within the proviso and is excused. The latter can be a purchaser and an informer at the same time. Thus he derives the profit of the shaveon the bill purchased, and the half of the fines.

The third section contains three propositions that should be conspicuously mentioned.

1. It levels its anathema at none but the Bank, Banker, Broker, Body Corporate and Public Officer, who it declares shall be fined for a violation of the law one hundred dollars, while it excuses all other offenders with a fine of ten dollars.

2. It gives one-half of the fine to the informer.

3. However much the informer may have participated in the violation of the law, he shall not be punished.

The fifth section is no less deserving of prominent mention. After providing that those putting the paper in circulation, should redeem it in gold and silver, and the Banks should forfeit their charters, it goes on to provide that all notes, &c., discounted by any Bank, Banker or Broker, (applicable to no other class of citizens,) in whole or in part, with such paper, shall be void, and no action shall be maintained to enforce its collection.

Before proceeding to the discussion of the legal views, suggested by this law, we may premise that the act is marked by a spirit of proscription and injustice, alike wanton and fraudulent. It singles out for its special vengeance one class of citizens who happen to be occupied in dealing in money. Under the cloak of legislating against certain bank paper, it is the most premeditated *special* legislation. It is plainly intended to paralize still further the business of Cincinnati, against which the legislation of this state has been to a very considerable extent, directed for some years past. To aid them in this proscription, they offer the largest bids for fraud and perjury.

It seeks to drive out of circulation in this state the legitimate, lawfully issued bank paper of sister states, not because it is not considered good, and is not promptly redeemed at home, but because it does not happen to be issued by some of the few banks remaining in this state, which these same legislators have not succeeded in struggling. They are not willing to allow the matter to be settled by the laws of trade, which are the most certain correctives of an unsound currency.

We now proceed to the consideration of the legal propositions involved in this act. We maintain first that the law is a violation of the constitution of this state.

2d. That it is a violation of one of the cardinal principles of the "comity of these states," if it is not at war with a well known provision of the constitution of the United States.

3d. Its provisions are so inconsistent, and withal so antagonistic, that they cannot be enforced in any court of justice.

4th. Its provisions are oppressive and tyrannical—the manifestation of the will of the strong against the weak—the oppression of the *minority* by the *majority.*

I. It is a violation of the Constitution of this state.—The 26th section of the 2d Article of the Constitution, declares that "all laws, of a general nature, shall have a *uniform* operation throughout the State "

The *uniformity* here spoken of applies as well to individuals as to property, and the law must operate in every section of the state alike—that is with the same effect both as to the *prohibition* and the *punishment.* When the Legislature creates an offense, it must apply to every county in the state, and the puishment for its commission must be *equal*—uniform upon all offenders — It would not be valid to declare that a Merchant, for the crime of horse stealing, should be punished by confinement in the penitentiary for a period of twenty years, and other persons for the same offense, but ten years.—That would be *unequal* and wanting in *uniformity.* For the same offense then there can be no *distinction* as to offenders, but the law must operate, for all purposes, alike on all.

It may be urged that if the construction here given to the word "uniform" is proper, all those laws are necessarily void which define an act to be a crime, when done by certain classes of citizens, (i. e, embezzlement by *servants*, frauds by *common carriers*, and offenses committed by *public officers*, which would not be a crime if done by an other citizen. But there is no want of uniformity in the operation of such laws. The distinction is clear between these statutes and a law pronouncing certain conduct criminal, by whomsoever done, but discriminating in favor of a certain class as to the penalty for its violation. In the one case the act only becomes a crime, because committed by the persons specified.—Their peculiar occupation or employment enters into the act as an element of crime; and the law in such cases is uniform in its operation upon all who can be charged with the offense. But whilst the law under consideration is general in its nature—defining an offense with which any citizen in his character as an individual can be charged, it expressly provides a lenient penalty for certain offenders, and punishes with tenfold severity others who, by the express terms of the law, have committed no greater or other crime. And therefore it is not uniform in its operation.

That this provision in the constitution was intended to prevent just such legislation, we refer to the remarks of Mr. Smith, of Warren county, (its author), in the convention that framed the constitution. He says: "In relation to the punishment of crime, although we had a general law upon the subject, yet it larceny was punishable by fine and imprisonment in some counties, and in others by hard labor." Debates O. Con., Vol. 2, P. 227. See remarks of Mr. Nash to the same effect. (ib) Certainly it was not expected by the framers of the constitution that a provision intended to guard against such laws would sanction a law providing different penalties for the same offense, when committed by citizens of the *same* county. If practices such as were referred to in the convention were to be remedied, what protection could they have designed to extend to a law such as the one under consideration?

The uniformity in the operation of general laws, provided for by the constitution, is not a territorial uniformity only. If such is the fact, it fails to provide against a want of uniformity, and against a species of special legislation fully as injurious and arbitrary as that species of local legislation against which it undoubtedly does provide.

It has been a practice in this State, especially in the earlier periods of its legislation, to pass statutes conferring *special powers* upon individuals, in cases where the subject matter furnished the proper occasion for a general law. This practice was to be checked, no less than the evils arising from the passage of laws of a limited local operation.

A remedy was needed in both instances. Under the circumstances it is a narrow and unwarrantable construction, which seeks to confine the application of constitutional provisions to one class of the evils and that only. The language of this provision is unqualified.—Let it be shown that this general law has not "a uniform operation throughout the State" and the conclusion against its constitutionality is inevitable. It is a consideration of but minor importance whether the law is deprived of a uniform operation throughout the State, because it discriminates between citizens of different localities in the State, or because the discrimination is between citizens of the same locality. In both instances alike the law is not uniform in its operation throughout the State. The uniformity provided for must be a uniformity as to all the citizens of the State.

If we have given the true construction to the provision of the constitution, it follows that the sections of the law under consideration are unconstitutional and therefore void. Under this view of the law, no penalty can be inflicted or forfeiture incurred upon its violation.—The second section of the law, by the terms of which the paper is to be held worthless, and all contracts in relation thereto, and disbursements, payment or exchange thereof, are pronounced void, we do not regard as in conflict with the provisions of the constitution commented upon.

In the third place, the meaning of this term *uniform*, as it occurs in this constitution, came up and received

an interpretation by the Supreme Court of Ohio, in the recent case of the Exchange Bank of Columbus against O. P. Haines, Treasurer, decided last winter. The tax law of 1852, prescribed a different rule for the appraisement of the property of Banks, Bankers, Brokers, &c., than for other tax payers, and the question presented in that case was, whether that distinction could be constitutionally made. The 2d Section of the 12th article of the constitution, which declares that "Laws shall be passed, taxing by a *uniform rule* all monies, credits, investments in bonds, stocks, joint stock companies, or otherwise; and all real and personal property," &c., it was claimed was violated by the tax law in the particular named. The Court held that the law was unconstitutional, in so far that it made the distinction in the rule between Banker, &c., and individuals; because it was not *uniform*. This is the ordinary meaning given to the word. Certainly that interpretation should be no less strict, when its meaning is to be ascertained with the view to construing a *penal* statute. So far as this term is concerned, the two provisions of the constitution must be construed by the same rule of interpretation. The reasoning which sustains this opinion of the Supreme Court, must apply with far more force to the 26th Section of the 2d article, because the one relates to property, and should be construed liberally, whilst the other relates to matters penal, and should be subjected to a more rigid test.

Now the law under consideration is a general law, and operates partially as to individuals, and to same extent as to territory.

In the first place it *distinguishes* in the *degree* of punishment for the *same offense*. The Banker, Broker, &c., by the third section is fined *one hundred dollars*, for violating the laws, whilst all others are fined but *ten* dollars, for the same offense.

This is without doubt a partial and not a uniform law. It operates partially and oppressively upon one class of offenders, and is thus brought within the class of laws intended to be provided against by this provision of the Constitution. It is special and not general legislation.

In the second place, the provisions of the fifth section of this law, bear the impress of *partial* or *individual* legislation, if possible, more glaringly than the third section.

1st. For a violation it *forfeits* the charter of the Corporation.

2d. It declares all notes, &c., discounted by any Bank, Banker, or Broker, *void*, whether discounted in whole or in part by such bank paper.

3d. No action shall be maintained on any paper so discounted, nor shall its collection be enforced *in any way*.

Now, it is to be observed that these extraordinary penalties are not made to apply to any but the Bank, Banker, and Broker.

The very greatest penalty imposed upon all other class of offenders is a fine of ten dollars, and the redemption of the money, in gold and silver, though it may be fairly doubted whether the last part of the penalty covers the case of an individual not connected with some corporation,

Judge Catronthen of the Supreme Court of Tennessee, but since one of the Judges of the Supreme Court of the United States, held this language in reference to a similar law:

"The right of life, liberty, and property, of every individual, must stand or fall by the same rule or law, that governs every other member of the body politic, or '*land*,' under similar circumstances, and every partial or private law, which directly proposes to destroy or affect individual rights, or does the same thing by affording remedies leading to similar consequences, is unconstitutional and void. Were this otherwise, odious individuals and corporate bodies, would be governed by one rule, and the mass of the community who made the laws, by another. The idea of the people, thro' their representatives, making laws, whereby are swept away the life, liberty and property, of one or a *few* citizens, by which neither the representatives nor their other constituents are willing to be bound, is too odious to be tolerated in any government where freedom has a name."

11. Yerger 260 Vauzant v. Waddle.

See also the case of Budd vs. the State, 3 Humph, 483. That was an indictment against the defendent as Clerk of the Union Bank for embezzlement; the proceeding being had under a special law passed for the benefit of that bank. and operating against its officers, &c. alone. The act was declared unconstitutional, because it did not embrace all persons, in like state, and surrounded by similar circumstances.

Again this act cannot operate in all its provisions throughout the whole State, and therefore it is not a uniform law. There are counties in the State in which there are no Banks, Bankers, or Brokers, and this fact was known to the Legislature when they pssed the law.

For these reasons we cannot believe that the law is constitutional. We might rest here with the fullest confidence, that we have established this proposition. But there are other views of the subject, which to our minds are conclusive as showing the invalidity of this law.

II. It violates one of the cardinal principles of the "comity of these States," if it is not at war with a well known provision of the Constitution of the United States.

The law seeks to *prohibit* the circulation of the Bank paper of sister States of less denomination than ten dollars, whether such paper is the *lawful* issue of the Banks of sister States or not. It operates as a general prohibition upon all Bank paper of that denomination not the issue of Banks in this State.

Paper money has grown to be as much an article of commerce as any of our staples. It is bought and sold and exchanged, and forms a very large item of commerce between the States of this Union. It is produced or issued in all the States by the authority of the laws of such States, and is intended to *represent* money. We hold that all such paper may be lawfully brought into this State, for sale or exchange, and our Legislature has no authority to pass a law to prohibit it, any more than they may pass a law to prohibit Kentuckians from bringing their hemp and tobacco here for sale. The Constitution of the United States has reserved to Congress the right to regulate commerce among the several States, and any attempt of a State to prohibit a sister State from carrying on its lawful trade with such State, would be a violation of this provision of the Constitution.

The Bank of the United States, without the permission of the States, established agencies in several of the States, and after the expiration of its charter in 1836, the Government of the United States established deposit banks in a number of the States. These acts show that the power to regulate commerce among the States, through the medium of exchanges and the currency, is vested with Congress, and has been so exercised for half a century.

But if it does not violate this provision of the Constitution, it does most certainly violate the comity of these States. This is a doctrine which has been recognized since the case of the Bank of Augusta vs. Earl, 13 Peters, 519, and will not fail to be well received law as long as the Union lasts.

A sister State has declared certain Bank paper legal, and some of it finds its way, by the force of the laws of trade, into Ohio. Now, the moment it reaches Ohio it is an article of trade and commerce. Any of her citizens may buy or trade for it, the extent of which, however, will depend upon the value of the money.—The law of comity requires that the laws of Ohio should not cripple this article of commerce thus sanctioned by the laws of a sister State, *simply* because it emanated from the sister State. Chief Justice Taney, in the case above referred to, says: "We think it is well settled, that by the laws of comity among nations, a Corporation created by one sovereignty is permitted to make contracts in another, and to sue in its Courts, and that the same law of comity prevails among the several sovereignties of this Union. The public and well known and long continued usages of trade; the general acquiescence of the States; the particular legislation of some of them, as well as the legislation of Congress; all concur in proving the truth of this proposition."

There can be no doubt that the Legislature would have the power to regulate its police for the sale of any of the merchandise of her sister States, but she must do this with the view to *foster* and *encourage* the sale and traffic not to cripple it. Good faith and comity requires that the laws should be for the encouragement, not the suppression of the trade. Hence, a law which shall *prohibit* a sister State from carrying on commerce with her, would be at war at once with the provision of the Constitution of the United States, which we have been considering, and the law of comity which has served so happily to unite in a band of brotherhood these States. Now the law we are examining is severe in its *prohibition* against the introduction or circulation of the Bank paper of sister States. It is intended, and if carried out will drive such paper from the State. It denounces it as utterly "*void*" and "*worthless*" and will not allow it to be received in payment for any thing—so that we suppose that a citizen of Indiana, who might chance to be in this State, and have no other money with him than the small Bills of the Banks of that State, should offer to pay his tavern bill or other debt, with that money, he would be prosecuted, his money denounced as "*worthless*" and "*void*" and he compelled to redeem it in gold and silver. This case serves to show how onerous and unjust the provisions of this law are, and how palpably oppressed in all its provisions to the "Law of Comity." The harmony in trade and social intercourse, so long cultivated by legislation and other means, and so much desired by all good citizens, would soon find a sad end, if laws like this are to be enforced. The imaginary lines which divide us as States, for mere purposes of Municipal Government, would soon become impassable walls, cutting off all intercourse, and confining the citizens of those States within their respective State limits.

III. Its provisions are so inconsistent, and withal so antagomstic, that they can not be enforced.

1. The first section provides in terms for the punishment of *all* persons, but in the proviso excuses those who buy to send the paper home for redemption. Thus it leaves the person who sells to or exchanges the paper with the Broker (for no others are likely to send it home) exposed to a prosecution, while it exempts the Broker. It fines the seller ten dollars, and allows the Broker one half of the fine for informing, besides the *share* he makes by the transfer.

2. The third section exempts the person complaining from fine or forfeiture, *in the same case*, although a party to the illegal act. But he may be prosecuted in another case for the same act. The exemption applies to the *case*, not the *act*. Who would be safe to complain, if be were a party to the sale and transfer?

3. Notwithstanding the exemptions intended by sections 1st and 3d, the 5th section compels every offender to redeem all such money in gold and silver, so that the *favored* of the 1st and 3d sections find themselves common offenders in the 5th section, compelled alike with the persons they have complained of to redeem the money in gold and silver.

IV. Its provisions are oppressive and tyrannical—the manifestation of the will of the *strong* against the *weak*—the oppression of the *minority* by the *majority*.

1. Although the law in terms embraces *other* citizens, the true object of its framers was to reach the Bank, Banker and Broker. There has been a war carried on by certain of the legislators of this State for some years past, against dealers in money. This is one of that class of laws of which many are to be found on our statute books. For years past a systematic attempt has been made to break down all Banks in this State, and to a very considerable extent, the effort has succeeded, more particularly so far as Cincinnati is concerned. And now the effort is made to drive out the legitimate bank papers of other States, and they commence by crying down the smaller denominations. This is done by the *majority*. They use their places to oppress the minority or weak. The Banks, Bankers and Brokers are a small class compared with the politicians, and they have no meaus of redress, except in the conservative arm of the government, the judiciary, and the intelligence and virtue of the people. The one can not be appealed to for more than a year to come, while the strong arm of the other can be invoked at once, for courts of justice are always open. They will interpose to prevent *wrong* threatened by the majority to the *minority*.

"The law of the land," says a learned Judge in the case already cited from 3 Hampnaries "requires that all laws shall embrace all persons within its provisions in like circumstances. The feeble and obnoxious shall be protected from the injury and injustice of the strong and powerful, and in general to protect minorities from the wrong action of majorities."

See also the case cited from 2d Yerger 260.

1st. The Bank, Banker and Broker, are fined one hundred dollars while others are fined but ten dollars.

2d. The banks are deprived of their charters.

3d. The bank, banker and broker, forfeit the debt if the smallest portion of the amount embraced in it is the money of other States.

Thus it will be seen that the discriminations are all against this class of citizens, and all the extraordinary penalties are hurled at them. They are fined tenfold more, their property is swept from them, and their franchise taken away.

The largest bid is offered to the informer to prosecute them, thus pursuing them with the most unrelenting severity, and holding out to informers inducements to commit fraud and perjury in order to work their conviction. Independently of being the most extraordinary act ever found on any statute book, it abounds in bad law, bad morals and bad logic.

In conclusion we repeat that we have no doubt that the law is unconstitutional, and if resisted that it can not be enforced in this State in any of our courts.

Railroads.

MARIETTA AND CINCINNATI RAIL ROAD COMPANY.

The annual meeting of this Company was held at Chillicothe, on August 16th. The new Board of Directors consists of the following gentlemen: WILLIAM P. CUTLER, *Pres.*; JOHN MADERIA, *Treas.*; John Mills, Douglass Putnam, N. L. Wilson, W. S. Nye, A. B. Walker, F. Campbell, M. Scott Cook, A. Aegler, H. Smart, Alphonso Taft and S. B. Keys. Secretary, S. W. ELY.

We rejoice to see the spirit of enterprise and energy manifested in the operations of this Company. Through the tact and perseverance of its Directors, the Road has been put in a position above the ordinary fluctuations of the market, and is not likely to be checked in its progress toward completion. The portions of the work between Chillicothe and Blanchester, the heavy embankments, and the bridges in the Sciota Valley, are now complete and the rails mostly laid. The rail is the Compound Rail, consisting of two strips, which together form a heavy T. The different portions are tongued and grooved and held together by bolts, and so placed that the joints of the one portion come in the center of the other, thereby forming a continuous rail. This arrangement at once insures steadiness of motion and greater durability of the track, as well as does away with much of the noise and dust of railroad travel.

The bridges and masonry, thus far, are of the most durable and substantial character. That across the canal is a perfect specimen of art, thrown diagonally across the water, each stone is cut exact and proper shape and forms a whole of great strength.

By November we hope to see the Locomotive winging its course through the rich and beautiful valleys of this portion of our State, uniting us with Chillicothe, the finest and wealthiest of our interior towns. Situated midway between Columbus and the Ohio with no facilities for travel but the lumbering coach or the slow packet, during these latter years of lightning speed Chillicothe has received but few visits from the gay and curious, and has in a measure been neglected even by the avaricious; for her sake we rejoice to see her opening to the world, and about to pour the treasures of her agricultural and mineral wealth into the common store of our country's good.

NORTH-EAST & SOUTH-WESTERN RAILROAD OF ALABAMA.

On a previous occasion in one of the earlier numbers of the RECORD, we gave a short history of a portion of this line. Since which time the location of the entire line has been made, and the route is fixed from Chattanooga in Tennessee,—a point upon the Mobile and Ohio line,—where it is crossed by the Great South-Western line from Montgomery, Ala., to Jackson, Miss.

To secure this desirable line the Wills Valley road was consolidated with the main line, on the 9th inst., upon the following conditions:

1st. That the ruad between Cleveland and Chattanooga shall be controlled by the East Tennessee and Georgia Railroad Company. 2d. That Chattanooga and Wills Valley shall prepare the road through the Valley for the iron. 3d and 4th. That satisfactory arrangements can be entered into with the Nashville & Chattanooga Road for an intersection, five or six miles from Chattanooga; and that the Engineer on the road shall report favorably on the prospect of building a track of their own around Lookout Mountain, when necessity requires.

B. F. Porter, Esq., resigned the presidency of the Wills Valley road, and Prof. Gardner was elected president of the consolidated line; E. D. Sanford was elected Engineer-in-Chief.

The route and location of this extended and valuable route cannot be given more clearly than is to be found in the following letter to the Knoxville *Register*, some time since:

The letter says—

"Knowing the deep interest you feel in the East Tennessee and Virginia Railroad, I address this communication to you, that, together with my obligation in boyhood, is my only apology. Your road is a link in the *great chain* connecting our country North East and South-West, and from your coast makes the connection complete. I have the proud satisfaction to say to you and to my native home, that the most active steps are taking here to carry that connection out to the Pacific. Our connection with your road will be at Chattanooga—having a small link for noble Tennesee to make from Chattanooga to Cleveland or the Hiwassee or Charleston. From Chattanooga (look at the map) we come down Wills Valley through Decalb, St. Clair to Elyton, a perfect air line and in a valley all the way—about 120 miles. From Elyton to Tuscaloosa, and from thence to the point where the Vicksburg road crosses the Mobile and Ohio road, 120 miles, making 240 from Chattanooga to the Vicksburg road. From that point there is a road under contract to the line of Texas, near Shreavesport. From the Texas line to El Paso, 700 miles, Texas has offered a bonus of three million acres of land to any company that will build the road. That of itself will insure the completion of the road to El Paso. It is more generally understood that from that point the great Pacific Railroad must start.—Then from New York to the Pacific, your road is the nearest, cheapest and best road to California. The stock on that road too is invaluable. This road is to be the great thoroughfare not only of the United States, but of the world. The whole of the road from Elyton to the Texas line is now under contract, and I doubt not that before spring the whole will be from Chattanooga to El Paso, and that the whole will be completed in five years. The company of the North-East and South-West Railroad, have determined to make their own Iron. We have here on our line inexhaustible ore and coal, and can make the iron by the time the road is graded. We will put up two Rolling Mills on the route and Furnaces sufficient to supply them.

I will keep you advised of our progress from time to time.

With great respect, I am, yours truly,

WM. S. EARNEST.

Elyton, Ala., Nov. 11th, 1853.

GEORGIA CENTRAL RAILWAY AND BANKING COMPANY.

The following statement of the condition of the Central Railroad and Banking Company of Georgia, at the close of business on Monday, July 24, 1854, rendered in conformity with the call of his Excellency the Governor of Georgia, dated August 1, 1853, appears in the Savannah *Georgian:*

DR.

Railroad and appurtenances		$3,468,107 45
Notes and bills discounted and bills receivable		279,426 99
Due by other banks		39,001 37
Due by agents and other companies		83,910 00
Stocks in other companies		554,600 00
Bonds of other companies		47,500 00
Banking house and lot		13,512 97
Real Estate taken for debt		3,177 43
Railroad Expenditures		63,911 74
Interest on 7 per cent. bonds		4,053 00
Expenses (of bank)		1,238 99
Specie	$65,188 84	
Notes of other banks	1,334 00	65,522 84
Total		$4,724,982 78

CR.

Capital Stock	$3,500,000 00
Bonds due by the company	377,767 00
Bank notes in circulation	174 418 00
Suspense account	6,611 26
Due other banks and companies	62,413 16
Individual deposits	120,564 81
Unclaimed dividends	28,002 29
Railroad earnings (since June dividend)	76,988 17
Bank profits (since June dividend)	2,188 45
Balance being reserved fund	396,099 64
Total	$4,724,982 78

Of bills and notes discounted and bills receivable, all considered good, except—doubtful $31,817 03
Bad 6,150 00

State Georgia, City of Savannah.—Personally appeared, John W. Anderson, President, *pro tem.*, and George A. Cuyler, Cashier, who, being duly sworn, say that the foregoing return is true to the best of their knowledge and belief.

JOHN W. ANDERSON,
President, *pro tem.*

GEO. A. CUYLER, Cashier.

Sworn before me, this 9th day of August 1854. LAURENCE CONNER, J. P.

RAILROAD CONSOLIDATION.

According to previous notice, a meeting of the stockholders of the Cincinnati and Chicago, and the Cincinnati, Logansport and Chicago Railroad Companies, was held at New Castle, Indiana, on Thursday last, to consider the propriety of consolidating the two companies, and after a free and full discussion, in regard to the beneficial results of such an act, a vote was taken upon the question, and upward of thirty thousand four hundred votes were cast in favor of colsolidation, and none against it. After which the consolidation company assumed the name of the Cincinnati and Chicago Railroad Company. The following gentlemen were then elected Directors to serve till the first day of January, 1855.

C. B. Smith, R. M. Corwine, James Pullan, Jos. A. James, D. A. Powell, of Cin.; Williamson Wright, of Logansport, Ia.; Col. S. Meredith, William Buttler, Jesse Hiat, of Wayne Co., Ia.; Judge M. L. Bundy, of Henry Co., Ia.; Judge T. J. Sample, of Delaware Co., Ia.; Sam'l. Jay, of Grant Co. Ia., and Col. H. Hannah, of Wabash Co., Ia.; after which the Hon. C. B. Smith was unanimously elected President of the new Board, Col. S. Meredith, Vice President, and Stanhope S. Rowe, Secretary. The office of this Company is established at No. 33 Third street, Cincinnati.—*Cin. Gazette.*

NEW YORK & NORFOLK AIR-LINE RAILROAD.—The commissioners of the several railroad companies chartered by the states of Virginia, Maryland, Delaware, and New Jersey, and constituting the New York and Norfolk Air-Line Railroad, are to hold a meeting at the Astor House, in New York, on the 6th of September next. The Norfolk *Argus*, heretofore opposed to the construction of this road, has changed its opinion and comes out strongly in favor of it, and says the survey of the Virginia section shows that it is not intercepted by a single stream, being upon the ridge that rises gradually from the broad Atlantic on the one hand, and the bold waters of the Chesapeake on the other. It is almost a level stretch of more than 70 miles.

PEORIA AND BUREAU VALLEY RAILROAD.—The iron is laid on twenty miles of the upper end of the road; two daily freight and passenger trains are running to Henry, a distance of fourteen miles. The bridging and grading are in such a shape the balance of the way, that with one month of good healthy weather, the road can be in running order to Peoria.

Communications.

LOGANSPORT & NORTHERN INDIANA RAILWAY COMPANY vs. THE NORTHERN INDIANA COMPANY.

The following communication emanates from a source in which we have every confidence. The writer is fully posted in the matter of controversy between the companies, as well as deeply interested in the final issue of the difficulty.

While, as impartial journalists, we take sides with neither party, we simply remark that we have noticed the various articles upon this subject that have appeared in some of our leading journals, but have hitherto refrained from any remarks ourselves, not being sufficiently aware of the true merits of the case, to venture any opinion of our own upon the matter of controversy. The tenor of what we have thus read and heard has been such as to substantiate the assertions of our correspondent, who, we believe, would not willingly misrepresent the state of affairs, though both zeal and interest may lead him to some warmth of expression. We commend his remarks to our readers, and cheerfully tender the use of our columns to the opposite party, should they so desire, that both sides may be heard.

Aside and apart from the merits of this controversy, it would seem to us that this difficulty had its origin in exactly what has brought railroads generally into such disrepute at this time. We refer to the building of so many lines of railroad merely as a matter of speculation, without due regard being had to time and the necessities of the country. The Northern Indiana "Air-Line" road, is one of these speculative roads, and the stock of the company building it, (the Mich. So. & Nor. Ind.) is reaping the fruits of its untimely construction.

For the Railroad Record.

Ens. Railroad Record:—In the *New York Daily Times* of August 12, is an article signed "Several Stockholders of the Michigan Southern and Northern Indiana Railroad Companies," asking for information in regard to the arrangements and contract which has been made by the managers of those roads, with the Lake Erie, Wabash and St. Louis Railroad Company. Some of the inquiries are *hard to answer*, viz:—"Is there any perso-
"nal or private interest owned by the Direc-
"tors of the Michigan Southern and Northern
"Indiana roads, which is promoted by this
"contract? Have any of the Directors of the
"Michigan Southern and Northern Indiana
"road a larger interest in the Terra Haute and
"Alton road than in our line? And should
"our road be injured, to promote the Terre
"Haute and Alton road? Has any money
"been lent by the roads to the Terre Haute
"& Alton road? And on what terms, and
"why?"

I propose to add my share of light on this important subject.

About 18 months ago, the Northern Indiana Company commenced the construction of a new road from Toledo to Goshen. The old road makes so much of a detour northward as to give a line considerably longer than a straight line between Toledo and Chicago, and if the new line was intended to cut off this extra distance of travel, it is natural to suppose that an air line between those points, (or nearly 80) would have been adopted, as the country is such as to render one entirely practicable; while on the contrary, the new line makes a detour *southward*, so that although it is (mis)called the "air-line road," it is only 15 to 18 miles shorter than the old road. Now what was the object sought to be attained by the company in the construction of these 130 to 140 miles of new road, at an expense to the stockholders in the old road of $1,050,000, in the form of a *forced loan, or direct tax?* Simply for the purpose of extending their interests in the direction of St. Louis, by way of the Logansport and Northern Indiana Railroad, (or Eel River Railroad.)

At that time the Northern Indiana Company were locating the Toledo and Goshen Railroad; *their* engineers were also locating the Eel River Railroad, and the whole of the lines from Toledo to Goshen and to Logansport were under the control of the Northern Indiana Company. The road from Toledo had been located south-west 72 miles, into Dekalb county, Ind., in the direction of Logansport, as an almost direct continuation of the Eel River road from the junction to Toledo, the line westward from the junction to Goshen being a mere collateral line, not really needed, but thought to be useful. The business of the Eel River road was thus secured over 72 miles of the Northern Indiana road, and of itself was a sufficient inducement for the Northern Indiana Company to build these 72 miles, the profits on their business being equal to the interest on a million of dollars, to the Northern Indiana Company, and so acknowledged by all the Northern Indiana parties who were posted.

Suddenly the Northern Indiana Company turns about. The Eel River road is dropped, and a contract is made with the Lake Erie, Wabash & St. Louis Company, by which the Northern Indiana Company *gives* that company without pay, all the immunities, privileges and facilities which they have themselves in the Toledo depot premises, agree to furnish them with depot agents at Toledo, sell their tickets for them, etc., etc., as if the Lake Erie, Wabash & St. Louis road was a feeder to the Northern Indiana road to a large amount, instead of being, as it is, in direct competition with it.

If this is right, if all this is for the best interests of the Northern Indiana Company, why not drop the Toledo & Goshen road?—No great saving of distance is effected by its construction. Why tax the old stockholders by a forced loan of 25 per cent. on all their old stock, to build a new road like this? Or if it is necessary to have another line from Toledo to Chicago, why not have a *straight one?*

The fact is, the new line was carried down south into Dekalb county for the express purpose of connecting with the Eel River road, as a part of the St. Louis line, and would have proved one of the best paying lines in the West and of great benefit to the Northern Indiana Company. As it is, the Eel River road has received a cold shoulder, and every artifice which certain parties could adopt, has been resorted to, to accomplish its destruction; they are even going so far as to advertise the Eel River road as consolidated with the Lake Erie, Wabash and St. Louis Railroad, and abandoned, and this was done in the New York papers where it could not be seen and contradicted until too late to repair the mischief.

The inquiry of the Stockholders in the *Times*, is extremely pertinent, when they ask why such valuable depot privileges at Toledo are given away to a road which is in direct competition with the Northern Indiana road; and they might add another inquiry, viz: Why was the Eel River road neglected and driven to seek their eastern outlet by way of Detroit, giving another and *shorter* competing line Eastward, to share the business and profits of the Northern Indiana road, when its business might have been stopped at the junction, and all of it brought over 72 miles of the Northern Indiana new rood, to Toledo?—If this business is lost, of what use is the Toledo & Goshen line?

Was all this a part and parcel of the arrangement by which the Lake Erie, Wabash & St. Louis Company pay $300,000 to one of the Northern Indiana Directors for certain *floating* water lots at Toledo?

As the same director is a large owner in the Terre Haute & Alton road, had the subscription of $300,000 by the Lake Erie, Wabash & St. Louis Railroad Company to the stocks of the Terre Haute & Alton road, anything to do with the arrangement?

As the same individual is a large owner in the Toledo and Cleveland road, the Lake Erie, Wabash & St. Louis road is a direct feeder to that road at Toledo, and it was quite right for him to take care of the interests of his Lake Shore road; and although the stockholders of the Northern Indiana road are being taxed to a large amount for the construction of the new Toledo & Goshen road, which is, under all these arrangements, about as useful as the fifth wheel of a coach, still this industrious director is right, as he is taking the best possible care of his other interests.

The stockholders of the Northern Indiana Company may think it advisable to work after their own interests slightly, as the article in the *Times* would indicate that they are doing.

If they do intend to investigate these matters, it is about time for them to begin. If they are willing to have their million of *new stock* gambled away; if they are willing to be taxed for the construction of their new road after all necessity for its construction has been bartered away to a road which not only will never feed theirs to the amount of a dollar, but will run in direct competition with theirs for all of the St. Louis business; if they are willing to be sold out, house and home, so that private individuals in whom they have placed implicit confidence, and with whom they have entrusted the management and control of their affairs, may enrich themselves at their expense, they can be accommodated as easily as not. All they have to do is to hold still a short time longer and the thing will be accomplished. Perhaps it is already.

ONE WHO IS INTERESTED.

A VALUABLE INVENTION.

RAILWAY TRAVEL *sans* DUST, *sans* SMOKE, *sans* CINDERS, *sans* MISERY.

About an hour before the time for the departure of the 11 o'clock Albany and Buffalo Lightning Express, yesterday morning, says the *Albany Express*, we happened to see a coach run down into the station, that attracted our attention by the oddity of its appearance. The roof presented a series of what seemed to be three miniature observatories, in place of the half dozen queer shaped tin ventillators that usually occupy it, and the windows instead of presenting the usual flat surface, projected several inches in a concave shape. The coach was evidently an old one, thus remodeled. Curiosity being at the proper pitch, we walked into the coach to examine it, and found it was fitted up to test a new ventilator and dust-excluder. The windows were concave and divided into five sections each. The center pane, some 8 1-2 inches long by 4 1-2 wide, was made to open like a swinging sash. In the roof of the coach, at regular intervals, were three apertures, some 38 inches long by 11 inches wide, and lined with zink. About 4 inches from each of these was suspended by means of screws, an iron deflector of the same width and length, elegantly painted. So much for the interior of the coach. Mounting to the roof, we found the little "observatories" were nothing more or less than tanks containing water, and curiously constructed. Each tank was divided into six compartments, and each compartment contained an ordinary sized pail full of water, covering the zink-lined surface to the depth of an inch or two. Above these receptacles for water were two apertures for the free ingress of air when the coach was in motion. Between these and the opening into the body of the coach below, were upright slaths of the width and thickness of lath stuff, standing partly in the water and arranged alternately so that the in-rushing air could be thoroughly received. These slaths were each of them covered with thick coarse sponge.

When the car is in motion, the water in the tanks is agitated by the motion just sufficiently to keep the sponge saturated. The air rushes in laden with dust and other impurities, but before it escapes into the car below the wetted sponges arrest and abstract all these substances, and it passes down thoroughly cooled and cleansed, and therefore reaches the occupants of the coach in a condition to refresh them. The little windows being open, it rushes out at once, and thus an equal, constant and free circulation is kept up, for the concave construction of the window contributes to drive everything from within out. Therefore the fresh air is constantly coming in through the tanks, and not a breath of air, not a particle of dust or smoke or cinder can fly in from without.

To see for ourselves how it worked, we took the Lightning Train and rode as far out as Fonda, 42 miles. The car was placed at the rear of the train ventilated, which was a long one. It was speedily filled with passengers, each of whom seemed to be examining its novelties, and speculating upon their character. At the appointed moment the train sped away. We took the rear seat in the car, which, in dusty and hot traveling is, in the last car, the most uncomfortable one in the whole train. On we went until we reached a portion of the road between this city and Schenectady where new rails had been laid and the surface of the track was loose sand, in this dry time so dense was the cloud of dust that we could not, in some places, see fifty feet of the track behind the train, and yet the coach in which we sat was perfectly free from it.

DISSOLUTION.—By reference to our advertising columns, it will be seen that the firm of Smith & Tyson, manufacturers of Railroad spikes and chairs, at Baltimore has been dissolved. Mr. Tyson's interest having been purchased by Mr. J. Hopkinson Smith, who will carry on the works in his own name.

We are informed that the works are being enlarged and new machinery added to make them more efficient, if possible, and to fully supply the increased demand for their articles.

Mr. Smith is prepared to fill all western orders, via. the Baltimore and Ohio Road, at the lowest market rate. We commend him to the Railroad community.

SYRACUSE & BINGHAMPTON RAILROAD.—This road is completed to Tully, twenty miles from Syracuse, and a regular passenger train has been put upon that section.

SELF-ADJUSTING RAILWAY SIGNAL.

Mr. S. L. Spafford, the able Superintendent of the Baltimore and Philadelphia Railroad, (says the *Baltimore American*,) has invented a valuable self-adjusting signal to be used at draw-bridges, switches, railroad crossings and other places of danger. It can be attached, we are told, to any moveable structure, at a slight expense, it is simple in its construction and consequently not liable to get out of order. It can be elevated to any height desired and is so arranged as to show the proper signal, both by night and day. The chief merit in the invention, however, consists in the absolute imposibility to show a *wrong* signal by it; a desideratum long felt by railroad men.—The machinery by which the signal is operated is connected with the structure to which it is applied, in such a manner as to render it impossible to exhibit the signal of safety for the passage of a train unless the structure, a draw for instance, be in its proper place and surely locked.

The circumstance which led to this invention, illustrates its importance and value.—Soon after Mr. Spafford assumed the office of Superintendent of the railroad, with which he is at present connected, a freight train, running at night, was precipitated through an open draw into the river, causing the death of several persons and the destruction of a large amount of property. The draw, it seems, had been left open for the passage of a vessel, and the Bridge Tender being fatigued, fell asleep. The noise of the approaching train suddenly awakened him from his slumber, and being confused as was natural under the circumstances, he unwittingly exhibited the signal of safety instead of the signal of danger and the train went rushing on to its destruction. This accident directed Mr. Spafford's attention to the necessity of having a system of signals, which should be entirely independent of any human being, and, which, at the same time should be in all respects, reliable. After much reflection on the subject he succeeded in producing the Self-Adjusting Railway Signal, which was immediately introduced into use upon the Philadelphia, Wilmington and Baltimore Railroad, where it has successfully established its reliability and usefulness by sustaining every test to which it has been submitted.

WILLIAMSPORT & ELMIRA RAILROAD.—This road was opened for travel on the 7th.—Its length is 75 miles, and it is built in a most substantial manner. It is another link in the chain of direct railroad communication between Philadelphia and Niagara Falls, by way of Reading, which only needs the connection between Cattawissa and Williamsport to make it complete. This, it is stated, will be accomplished in a few weeks.

THE RAILROAD CONVENTION.

The Railroad Convention at the St. Nicholas closed its labors this evening with the unanimous adoption of a series of resolutions settling amicably the various questions which have been under discussion, and involving a general advance of charges on freights and passengers and a reduction of speed and amount of service. Through fares from New York to Buffalo by the two great routes are to be advanced on the 1st September to $8 equal to 50 cents advance, and to $9 during the winter season. Freight is to be advanced about 10 per cent. at present, with a further advance hereafter. There is also to be an entire discontinuance of the system of runners and Western agents, which will be an immense saving to all the roads. The system of free passes has been materially abridged by resolutions, and its entire abolition submitted to the consideration of the Presidents of the various roads. A uniform classification of freights on all the four great lines has been adopted, and the charges equalized. It was found upon comparison with other freights, that the mail service was performed at a cheaper rate than any other branch of service, and steps are to be taken to obtain a commensurate increase of compensation. The mail compensation was to be estimated to be 25 per cent. cheaper than the lowest grade of freight. The question of reduction of speed and service will be settled between the Central and Erie Roads, not coming legitimately before the Convention.

The action of this Convention must result in a large saving of running expenses to our roads and a considerable increase of gross earnings. The agreements of the Convention, strictly adhered to, would add half a million of dollars to the net earnings of both the Erie and the Central Roads.—*New York Tribune.*

RAILROAD EFFECTS.—No man can long continue a skeptic as to the effect of railroads on the general development and prosperity of the country through which they pass, who will take the trouble to keep his eyes open while passing along the Baltimore and Ohio railroad. At every station almost, a neat and thriving village is springing up, in many places towns, while the entire country wears a new countenance under the vigorous efforts of her husbandman, who now finds a market for his products, a place to furnish for his wants, and in either way calculated to reward his toil. Heretofore he could barely live by consuming what he made, and making all that he consumed; now the market is at his door and he can sell all that he makes and more than buy with his receipts all that he wants. The price of the land is increased cent per cent in many places, while the general tendency of everything is to go ahead. Counties can observe and profit and learn hence that their corporate subscriptions are repaid them with interest, the moment such works are completed, even should the stock not pay one per cent or sell for 20 per cent on first cost.—*Wheeling Intelligencer.*

UTICA & BIRMINGHAM RAILROAD.—At a meeting of the Directors of this road, held at Hamilton, on the 15th ult., A. J. Williams of Utica, was chosen President; Dr. D White of Sherburne, Vice-President, and J. Watson Williams of Utica, Secretary and Treasurer. It has been resolved to put the portion of the road between Utica and Sherburne immediately under contract.

ERIE RAILROAD.—The financial troubles of this road continue to be an exciting topic in New York. Its stock recently sold as low as $35, advancing an ⅛ at the second board. The New York Times says:

The failure of Mr. Henry Sheldon, one of the securities to Messrs. Brown, Brothers & Co., for their actual and promised advances, altogether about $600,000, has led to the abandonment of that arrangement so much talked of at the time. Messrs. Shepherd Knapp and Cornelius Smith, another director, both of whom were also joint securities for the advances in question, became alarmed, and declined any longer to become responsible, so that the Company were in renewed trouble for their floating debts.

Under these circumstances the Directors have applied for assistance to the leading Banks, offering the individual security of Mr. Drew, the Treasurer of the Company, and that of Mr. Nelson Robinson, a leading Director. The application has been partially successful, loans having been granted for six months from date on the acceptances of these gentlemen. The Bank of Commerce loaned $50,000; and the State Bank another $50,000; while Commodore Vanderbilt has consented, it is stated, to loan $100,000 on the same terms. Hopes are entertained that other Banks will supply the remainder of the $600,000. All this, it will be observed, is independent of the pending propositions to arrange for the payment of the income Bonds due in February.

THE PACIFIC RAILROAD.—The Committee charged by the late Southern Convention with the subject of the Pacific railroad, have prepared a memorial with accompanying acts of incorporation, to be presented to the Legislatures of the several Southern and South-Western States at their next session. The memorial urges strongly upon the Legislatures addressed immediate action upon the bills in accordance with the plan which secured the approbation of the Convention. Other drafts are to be presented to the Councils of the Cherokee, Creek, and Choctaw Nations.—The Committee, we are told—

"Entertain the most sanguine hopes that the plan here proposed will be carried into complete and successful operation; and that under it, roads from New Orleans by Opelousas, from Vicksburgh by Shreveport, from Helena, Memphis and Cairo by Fulton, and from St. Louis through the Cherokee, Choctaw and Creek country, will unite and form one great trunk, connecting those several points with the Pacific Ocean. Such a work as that the world never yet saw. Its influence upon the destinies of the South is incalculable. It can be built only by the united energies of the South, and it is worthy to tax those energies to their utmost."

BUFFALO & NEW YORK CITY RAILROAD.—The thirty days grace on the 1st mortgage bonds of the Buffalo and New York City Railroad having expired on the 1st inst., the Trustees have taken legal steps to foreclose the mortgage and sell the property.

SUBMARINE TELEGRAPH ACROSS THE MEDITERRANEAN SEA.—The operation of laying down a submarine wire from Spezzia to the Island of Corsica, part of the line intended to connect Europe with Africa, is described at length in the English Journals. The steamer Persian carried the wire, and she was accompanied by two Sardinian frigates. The distance is seventy-five English miles. A letter, after describing the mode of laying down the wire, says:

"As I conclude this, a gun has been fired on board the Persian by an electric spark passing twice to Santa Croce and back, through the whole length of the cable on board and in the water—that is to say, along 440 miles of wire—awakening the echoes of the Corsican hills with the tidings of their now being joined to the main land by ties which, it may be hoped, will be found productive of the happiest results to all parties."

OHIO AND PENNSYLVANIA RAILROAD.—The travel on this road, says the *Pittsburgh Gazette,* is much larger than in July, and the through freight is nearly twice as large, so that there is good reason to believe that the receipts of August will exceed those of any former month.

The freight cars of about twelve different roads are now running upon the Ohio and Pennsylvania Railroad, and freight is carried through from Pittsburgh to Cincinnati, without transhipment, in thirty-five hours. The coal trade westward has become a considerable item, and is rapidly increasing. Since the opening of the Darlington Cannel Coal Railroad, about sixty tons of cannel coal have been sent from Darlington to Cleveland, and thence to the city of New York, for the use of the gas works, and preparations are making to increase the shipments to several hundred tons per day.

GRADING MACHINE—ITS OPERATION.—On the Galveston, Houston & Henderson road, there is one of these machines at work; it succeeds admirably, and does the work of more than fifty hands. It is worked with ten yoke of oxen, and cuts a furrow of two feet wide, and from two to four inches deep, the whole of which is thrown from the side to the middle of the road as fast as the team moves forward, which is with the ordinary speed of an ox team. With the aid of this machine the work now being done is just about equivalent to what one hundred laborers can do. Additional hands and two more machines are soon expected.

HEAVY VERDICT AGAINST A RAILROAD COMPANY.—The decision of the referees in the case of Myers vs. York, and Cumberland Railroad, was given at Portland, yesterday morning, awarding Myers $159,000, costs and interest.

MONETARY.

The reports from the East exhibit an increased demand for money and consequently an increased rate per cent. We quote good Commercial paper at 12 to 15 per cent, Railroad, 18 and dull.

The New York Times says:

The demand for money is great. The amount of bills receivable offering for discount is very large, mostly dry goods paper, but they appear the most current security of the time, as the discount of stocks and bonds is very great. The lowest rates, however, are high, being 12 to 15 ℔ cent for good endorsed paper. Railroad paper, with good endorsers, is being offered at 18 ℔ cent without takers. Auctioneers' acceptances are 12 to 15 ℔ cent. Single named paper is 15 ℔ cent. Call loans are easy at 7 ℔ cent, but only to first class borrowers. There appears no stint of money, but very careful use of it.

The Stock Market had presented rather a dull appearance but brightened up in the beginning of the week with prices somewhat better.

The Tribune says the steamer Pacific brought out large orders for Central Stock and Illinois Central Bonds, and the effect of the purchases is seen in the rapid advance of prices for these securities. The orders were very considerable also for other shares and bonds, and the letters state that if we exhibited more confidence ourselves, the orders would be largely increased. The tone of the private letters is very cheerful.

In spite of the difficulties that were around them, the Erie R. R. have succeeded in the arrangements which were immediately necessary.

The Erie Railroad Company have raised the additional $200,000 they were negotiating for, making altogether $600,000. The acceptances for the $200,000 are stated to have the endorsement of Daniel Drew, and those for the $400,000, secured by a chattel mortgage, to have that of Commodore Vanderbuilt. The Banks after much consideration, have been induced to agree to discount the paper which is at five months' date falling due the beginning of February next.

The sales during the week past were as follows:

By A. H. Nicolay, Aug. 28—

$1000	Bonds	N. Y. & Harlem	1st mort. 7s	$84 00
1000	"	" "	" 7s	83 50
3000	"	" "	" 7s	83 00
1000	"	" "	" 7s	82 00
2000	Bonds	G. W. (Ill.)	1st mort,. 10s	75 00
6000	"	" "	" 10s	74 00

All the above with interest.

At the West, we have to note an active and somewhat pressing demand for Money, consequent upon the September payments, and the Bank difficulties with regard to the Small Note Law. There is, however, Money in sufficient supply, but holders are cautious, and the disposition seems to be to prepare for an emergency if it should happen.

The rates are not materially changed. We quote No. 1 Commercial at 10 to 15 per cent.; less known at 15 to 18. Eastern Exchange is at 1¾ to 2 per cent. for Bankers' checks, payable in mixed currency.

RAILROAD FROM JACKSONVILLE TO DALTON.—Just at this time the people along the line between Jacksonville, in Benton county, Ala., to Dalton, Georgia, seem to be alive to the great importance of the connection of a railroad between these two points. Large and enthusiastic meetings have been already held, and notices been given for others to be held, at different points on the route where the matter has already been discussed, and will continue to be discussed. The distance between the two places is 88 miles, and is thought that a survey can be made and a route secured that will reduce it to 80 miles. In this enterprise there cannot be much interest enrertained by the friends of the Alabama and Tennessee River road, for it, when completed, is only an arm of this useful work, and a useful arm too, for it at once connects our road with the East Tennessee and Georgia road, thus filling up the only link in the great National line of Railway between Selma, New York, Boston, Philadelphia and Washington City.

This link between Jacksonville and Dalton it is said has attracted the notice of Northern capitalists, and already a proposition has been made, of a very favorable character, to undertake the graduation and masonry.—*Selma, (Ala.,) Sentinel.*

RAILROAD FROM CHICAGO TO DECATUR.—The track upon the main trunk of the Illinois Central Railroad is already laid from Lasalle southward to within ten miles of Decatur, and there is also a strip of 28 miles south of Decatur, on the way to Cairo, where the track is laid. It is calculated to run the Aurora extension train into Decatur in a very few days.

Miscellaneous.

CASTINGS IN MALLEABLE IRON.

Mr. R. A. Brooman, the patent agent for a correspondent, has specified an improved method of preparing wrought-iron, so that it may be capable of being poured or cast into moulds for the production of malleable castings or articles, which shall have all the strength and qualities due to the wrought-iron. The invention is designed chiefly for the manufacture of railway wheels; but is equally applicable to the production of other articles. The process is as follows:—The metal employed may be either scrap wrought-iron, or bars or plates cut into small pieces, and the melting is to be performed in crucibles, such as are used for melting blistered steel. The operator weighs out the iron in quantity proper for a charge in the crucible according to its size; he then mixes with the iron about one-half of one per cent. of charcoal by weight, or of any other suitable carbonaceous matter which will afford that proportion of carbon; and finally adds one per cent. of manganese, and one per cent. of sal-ammoniac. These materials are to be placed in the crucible, which is then to be covered, as the melting must be performed out of contact with the atmosphere. The crucible is then introduced into a proper furnace, where a fire is raised, and a heat obtained sufficient to reduce the iron to a melted mass, which temperature is about 15,000° Fahr. This degree of heat must be maintained for about three hours, when the material will be in a state fit for pouring into the moulds. Railway carriage wheels, formed of this material, can be cast with a chill, as in the case of common iron castings; and they will moreover be malleable, so as to be capable of being treated under the hammer in the forge, and formed into other shapes. In the making of other articles, not requiring to be chilled, they may be subjected in like manner to alterations in shape, or otherwise be treated as malleable wrought-iron is usually worked. Articles may also be manufactured having part of their shape made in the moulds, and their form completed by forging. Thus, intricate shapes and ornamental work may be accomplished with great facility and in a superior manner; thus forming articles highly ornamental, as well as those of mere utility. The patentee claims the method of treating malleable iron so that it may be capable of being used in the production of malleable castings, as heretofore described.

The New York Central Railroad has purchased one of the wires of Morse's Line of Telegraph between Albany and Buffalo, for the exclusive use of the road. Offices are to be established at the various stations.

Extraordinary Performance of a Locomotive.—We the other day spoke of the remarkable economy in fuel in the running of the locomotives turned out in this city of the Cuyahoga Locomotive Works, which machines are now in use upon the Cleveland, Columbus and Cincinnati, and the Cleveland and Pittsburg roads. Since then further exploits of these locomotives have excited the admiration of railroad men, and mechanics, and the astonishment of even the sanguine builders themselves. As an instance, we can say, and can prove what we say to be true—that the locomotive Nashville, belonging to the Cleveland, Columbus and Cincinnati, and Columbus and Erie Railroad Company Geo. Westfall, engineer, ran from Columbus to Erie, and 40 miles back, or in all 295 miles, with one tender of wood. This feat is unprecedented in the history of locomotives, and we challenge the world to produce a like instance.

This was done on one of the daily trips of the lightning train, with an ordinary train of cars, and subjeet to all the stops, checks and interruptions of every day running. The feat was unknown to the builders of the engine, until after it was accomplished, and they had no knowledge that it was to be attempted.—*Cleveland Herald.*

The same paper says of another of these engines: Engineer Moores, who runs the *Rocket* on the Cleveland and Pittsburgh road, has given us the precise amount of wood consumed on yesterday in running the *Rocket* from Wellsville to Cleveland. The distance is 104 miles, and the wood used was three-fourths of a cord less five feet. This wood was measured by Mr. Moores, and was fed to the engine by Fireman Reed. The amount usually consumed in ordinary engines running the same distance is three cords.

The *Rocket* in performing this feat, hauled the express train, consisting of four cars, made twenty-one stops, and maintained the daily speed allowed that train.

This engine weighs twenty-five tons, and has a six foot driver.

Brownsville & Rio Grande Railroad, Texas.—A meeting of the commissioners of this company was held at the office of Converse & Co., New Orleans, on the 1st day of July, 1854.

The resignation of John R. Butler as President of the Board was received, read and accepted, and Wm. P. Converse was elected to fill the vacancy.

It was resolved, that books of subscription to the capital stock of the Brownsvillle and Rio Grande Railroad Company be opened at the office of Converse & Co., to remain open sixty days under the superintendence of W. P. Converse, and John C. Shannon, Commissioners, from 10, A. M. to 2, P. M., each day.

Resolved, That the sum of eighty thousand dollars be reserved for three months for subscription at Brownsville, and that books be opened there under the supervision of F. Cummings, Esq., for the above named time, unless the same is sooner subscribed.

North-East and South-West Alabama Railroad.—On monday night the City County of Chattanooga met—a full board being present—to consider the question of transpirring the city subscription of $100,000, of the Wills Valley Railroad, to the N. E. & S. W. Alabama Railroad, and have it *bona fide* and available in three years, to date from the time the entire grading, and an additional cash subscription of $600,000 are raised for this line. After a spirited discussion, in which all participated, it was carried, and the Mayor is thus authorized to make that subscription. *How* this money is to be raised is a matter of after consideration—to be determined when the full amount is subscribed along the proposed route. We are decidedly in favor of the construction of this road, for, when terminated at this point, we have such a powerful concentration of railroad interests that the town *must* take a new and more rapid start, and fully achieve that business importance so frequently alluded to and prophesied in the past ten years. Progress is the watchword.—*Chattanooga Adv.*

ACKNOWLEDGEMENTS.

We have received from S. L. Spafford, C. E., Superintendent of the Philadelphia, Wilmington and Baltimore Railroad, a copy of the "Rules and Regulations" for the management of the affairs of that company. It is a bound volume and contains full instructions to every employee of the company. A similar issue is recommended to every company. Mr. Spafford has our thanks for his attention.

We are also indebted to Jno. J. Blackwood, Cashier, of Hamburgh, S. C., for valuable reports, for which he has our best thanks. We shall give extracts from them hereafter.

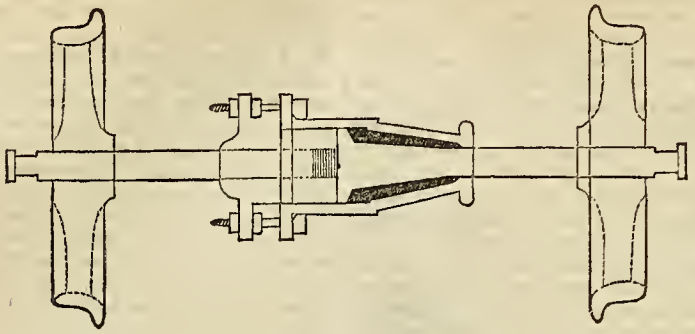
Rail Road Printing.

WE ask the attention of Railroad men to our facilities for doing every variety of Printing needed or used by Railroads. We have taken especial pains to fit up our establishment with reference to this branch of business.



Reports, with or without maps or illustrative engravings, will be gotten up at short notice and in superior style.

Blanks of any description, adapted to the wants of the different departments of Railroad business, and to the wishes and tastes of parties, will be prepared in a style warranted to give satisfaction.

Blank Books, with or without printed headings, ruled to any pattern. Day Books, Ledgers, and every vaaiety of Blank Books, made to order.

T. WRIGHTSON & CO.,
Rail Road Record Office, 167 & 169 Walnut st. Cin.

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the enrvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alley, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it can be refilled, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

Pittsburgh, Philadelphia, BALTIMORE AND NEW YORK.

NEW ROUTE OPENED TO NEW YORK, ALL THE WAY BY RAILROAD, VIA **CINCINNATI, HAMILTON & DAYTON RAILROAD.**

The quickest, cheapest and most pleasant route to Pittsburgh, Philadelphia, Baltimore and New York.—Depot in the West end of the city.

Only route via Pittsburgh by which through tickets can be obtained from Cincinnati to New York.

One less change of cars than any other route.

Passengers leaving Cincinnati, on 6 o'clock morning train of Cincinnati, Hamilton & Dayton Railroad, go through to Crestline without change of cars, and, after 30 minutes for dinner, proceed by Ohio & Pennsylvania Railroad, arriving at Pittsburgh at 8 o'clock P. M.: leave Pittsburgh via Pennsylvania Central Railroad, at 9 o'clock, P. M., and arrive in Baltimore and Philadelphia at 12 o'clock and 30 minutes (noon) next day; and from thence via Kensington and Jersey City, or Camden and Amboy Railroads, arriving in New York at 4 P. M.

Second Train:

Leaves Cincinnati, Hamilton and Dayton Railroad at 8 o'clock and 20 minutes every morning: arrives at Crestline at 4:20 P. M., and Pittsburgh at 12 o'clock and 30 minutes, midnight; and after a comfortable night's rest, resume by 7 o'clock A. M. train, arriving in Philadelphia and Baltimore at 12 o'clock and 30 minutes, midnight.

The only offices in Cincinnati at which Through Tickets can be purchased from Cincinnati to New York, via Pittsburgh and Philadelphia, are under the Spencer House, and one door below the Gibson House on Walnut street.

FARE:

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to these of any other great threugh line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such faver as a passenger read, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as seen as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NEW SOLD IN

Cincinnati, Louisville, Madisen, Indianapolis, St. Lenis, Chicage, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to

WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodatiens are previded. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road cennects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Besten, the Ericsson Steamers by Canal to Philadelphia and New York,

And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and te Richmond, Norfelk, Charleston, Savannah, etc.

New route from Columbus, West and from Urbana, East.

On and after Monday September 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between COLUMBUS and URBANA. Will leave Columbus at 4.50 a.m., and 3.30 p.m.—arriving at Urbana at 8.12 a.m., and 6.14 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with the night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morning Cleveland and Zanesville trains can have a few hours at Columbus and leave by the 3.30 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton and Cincinnati.

The 9.15 a.m. train from Urbana connects with the morning train from Cincinnati and Dayton that arrives at Urbana 8.40 a.m.—arriving at Columbus at 12.05 p.m in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Sandusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibuses will connect with the trains at Urbana for the conveyence of passengers to and from Piqua and Greenville over a good Macadamized road.

WINSLOW'S
PATENT COMPOUND RAIL.

THIS RAIL, which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a

THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are—a saving in the wear and tear of Machinery—it saves, to a great extent, in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable Being practically a continuous Rail for the entire length of the road, without break at the ends of bars, the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effects upon Cars and Machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at Hanging Rock Iron Works, upon the Ohio River, and at Mt. Savage Iron Works, Maryland. Specimens of the Rail and patterns of the same will be gladly shown, as well as information in relation thereto, given by application to

A. S. WINSLOW, Nos. 9 & 11 West Second Street, bet. Main and Walnut Sts., CINCINNATI.

WHEELBARROWS!

ON hand, Wheelbarrows, of my own manufactur suitable for Railroad, Turnpike, Canaling, etc., in ots to suit purchasers. Orders filled for any reasonable amount.

HENRY ROCKEY,
jy. 20. No. 21 East Front st.

CAR MANUFACTORY,
Dayton, Ohio.

E. THRESHER & CO., having enlarged their shops, are prepared to contract on favorable terms, for building every variety of railroad Cars, in any quantity and on short notice, made of the best materials, and of the most approved workmanship.

They are prepared also to furnish jaws and boxes; the Washburn Wheel, 30 and 33 inch, adapted to inside or outside bearing; cast iron frogs, steel plated; and switches of the most approved patterns.

They also manufacture blacksmith tuyeres, Harris' Patent; portable bolt forges: bolt heading and bolt cutting machines; upright drills, wheel presses; wood planers; tenoning and mortising machines, etc.

They respectfully invite the attention of railroad directors and superintendents to their establishment.

KENTUCKY LOCOMOTIVE WORKS.

CORNER OF KENTUCKY AND TENTH STS.

LOUISVILLE, KY.

THE Proprietors of the Kentucky Locomotive Works would respectfully inform Railroad Companies and the public generally that, having completed their establishment, they are now prepared to receive and execute orders with fidelity and dispatch.

They will contract for

Locomotives, Passenger, Baggage, Freight, Gravel and Hand Cars,

Of every style and pattern, as well as all kinds of Steam Machinery required for railroads.

Particular attention will be paid to repairing, which they have every facility.

They are also prepared to contract on favorable terms for building all kinds of Machine Tools, such as Turning Engines, Lathes, Planers, Drills, Slotting, Spliting, and Shaping Machines, of every variety of pattern.

Having also a large FOUNDRY connected with the establishment, orders for Castings are solicited, and will be filled with promptness.

Car Wheels of any pattern can be furnished on short notice. Double and single plate and Spoke Wheels of all sizes constantly on hand.

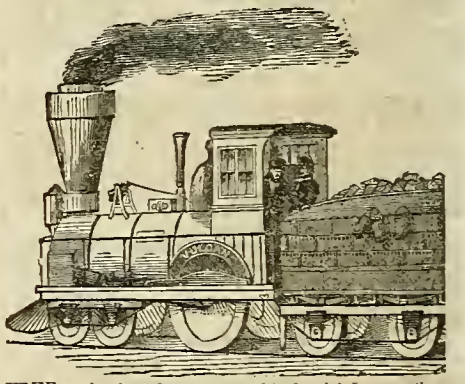
☞ Communications or orders must be addressed to OLMSTED, TENNYS & PECK,
je.8-tf Louisville, Ky.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of those boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Reservoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.



The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,
PRINCIPAL AGENT,
May 18.6* Office, No. 167 Broadway, New York.

Cincinnati Locomotive Works!

THE undersigned are prepared to furnish Locomotives equal in efficiency and durability to the best Eastern manufacture. Also, Shaping and Slotting Machines suitable for railroad shops. Also, all kinds of heavy forging and casting done at short notice. Also, bolts for bridges cut with dispatch.

DESCRIPTION OF PLAN.

Fig. 1, of the above cut, represents the foundations, consisting of *Bank* and *Track Walls*, the latter made of cut, the former of hammer-dressed stone, with cut stone coping. The Track is bent of the ordinary T rail, spiked and leaded to the stone track walls. The Center Pier is made of cut stone, with a step for screw and pivot bolted to the same.

Fig. 2, shows the framing.

Fig. 3, is a side view of Main Truss, with the mode of gearing, including the mitre-wheels, iron crank frame, rack and pinion, foundations, pivot wheels and pedestals.

Fig. 4, gives a perspective view of rim, segments, decking, etc.

Fig. 5, is an end view of the main trucks, with pedestals and wheels.

Fig. 6, is a screw for pivot, 6 inches in diameter, working in a steel step through a nut for adjustment.

Fig. 7, shows a cross section of track wall, well, and pedestal.

FORT WAYNE, LACON & PLATTE VALLEY AIRLINE RAILROAD.—The application to Congress for a donation of lands in aid of this great national work failed, owing to the impossibility of getting the bill acted upon at this session. The road was quite a favorite work with the members, and all who examined the proposed route were satisfied that it presented favorable claims for national aid. If the bill could have been reached, it would undoubtedly have passed. This failure, coupled with the stringency of the money market, and the impossibility of raising funds on any description of railroad securities, has delayed the prosecution of the work; but the directors feel sanguine that ere long they will be able to make a vigorous commencement of the work of construction. The money market is becoming more easy, and there can be no doubt that capitalists will, as soon as public confidence can be restored eagarly avail themselves of the opportunity of investing in the securities of this company.

A joint meeting of the several boards of directors will shortly be held at Lacon, Illinois, to take into consideration the prospects of the road, and devise measures for its early construction.—*Fort Wayne Sentinel, Sept. 2.*

RAILROAD MEETING.—We learn from the Zanesville *Aurora* that the Stockholders of the Central Ohio Railroad, on Monday last, elected the following gentlemen as Directors of said Company for the ensuing year:

John H. Sullivan, Chancy Brooks, N. L. Whittimore, N. Wright, John Davenport, J. W. Hall, George James, S. R. Hosmer, William Galligher, Samuel Clark, George B. Wright, D. W. Dreshler, Samuel Brush.

There was no opposition to the ticket elected with the exception of George James, Esq., of Zanesville. He was elected over Mr. Sarchet, of Cambridge, by a close vote, the foreign vote generally having been cast against Mr. James.

CONSTITUTIONALITY OF THE SMALL NOTE LAW.

Tinkering with the Currency, is one of the habitual vices of American Legislation.—Scarcely a session of the Legislature has been held in Ohio, (and it is the same in other states), where some law is not passed to make, mend, corrupt, or destroy the currency. This is not only bad in itself, but it is most deplorable when done by men, nine tenths of whom are ignorant of the first elements of political economy. Next to quack medicine for the body, quack legislation for commerce is one of the worst of evils. The *small note law* of Ohio is one of these quackeries. What was it enacted for? To drive out paper, and substitute coin under ten dollars? Not at all: for the sixty banks of Ohio may issue as many small notes as they please; coin will not be increased one dollar. Was it to drive out *foreign* small notes? The states of Kentucky, Virginia, and Connecticut, are not *foreign* states. They are members of the same great community, from whom we cannot separate in any particle of commerce, society, or interest. But, it is *not* to exclude *foreign* notes. If that were the object, *all* should be excluded. It is difficult to discern what was the object; but, in its misty obscurity, one thing is quite obvious, it was intended to give as much trouble to persons engaged in banking as possible, and in that will accomplish its end.

So far as this effects the free banks of Indiana and Illinois, its operation may be salutary; for these banks have in a *twelvemonth* put out *ten millions of notes*, based entirely upon State Stocks, which are in turn nothing but credit. If this system be not arrested, it must in another year be inflated to such a degree, as to burst and destroy the whole system, to the great injury of community. So far, the small note law may claim some merit; but even here it fails. The *ten* dollar notes, and all above, of the *same* banks, still have immunity untouched by law. Not only that, but the law drives out the small notes of the best banks of the American Union. There is no point of view, in which the small note law has either sense, principle or consistent object. It is incongruous, inconsistent, and impolitic. A more important question, however, is whether this law is really *constitutional?* If it be, then it is very clear the constitution permits a very palpable oppression on particular classes of the community. In the last number of the RECORD, we published the opinion of Messrs *Corwin, Hayes and Rogers*, attornies. We do not agree with that opinion, so far as it lays stress on the idea of comity between the states. It is a very unwise thing to do a discourteous act; but, it is not, therefore, an illegal one. A state has a right to make what laws it pleases, in relation to its financial or commercial policy, and though its law be unwise, it cannot be called in question for its policy.

But Messrs. Corwin & Co., have made one point, which cannot be blinked. Is a law, drawing *palpable and oppressive distinctions*, against particular classes of men, *uniform in its operations?* We do not think a candid man, can for a moment doubt that *it is not.* The 26th Section, 1st Article of the Constitution of Ohio, declares, that *all laws of a general nature shall have a uniform operation throughout the State.* Common justice requires this. If a general tax law then, shall make the tax, or the penalty for non-payment, fourfold as great on merchants, as on any other class of men,—it is clearly unconstitutional.

It will hardly be said, that this principle is to apply to *territory* and not to persons; for this is to assume that the constitution followed the shadow and not the substance. If the Legislature can fix a penalty on bankers ten times greater than on individuals, then no law need be made *uniform.* Thus opening the door to every species of oppressioon.

But if the law be unconstitutional, will the Supreme Court declare it so? We cannot guess. There was a time, when courts were governed by principle; but, what they will do now we might know, if we knew where the wind will blow next. Our courts like our laws, present a scene of confusion unparalleled. The volumes of reports, like those of the statutes have ceased to embody any permanent principle. It is the people who must decide this question, by upsetting if possible all political quackery.

THE REMISSION OF DUTIES ON RAILWAY IRON.

We have published, as our readers know, a series of articles on the remission of duties on railway iron. This *remission*, however, was expressly confined to *rail bars*, and intended only to be temporary, for the purpose of aiding railways now partly completed, and struggling for existence. Ardently and always in favor of American Manufactures—and as we thought, pretty thoroughly acquainted with the subject—this temporary and practical remission of duties appeared to us a proper and an important end, to be urged upon statesmen mindful of their country's best interests. It was urged upon no other ground. Yet the *American Railway Times*, a paper which receives its support, we imagine, from railroad men, attacks the object, the men engaged in it, and their motives. Its first objection is the stale and obsolete cry of injury to American manufactures. In what part of the United States is the iron manufacturer to be injured? If in any, only in a narrow strip on the coast. In the interior, the iron manufacturer is protected to a large extent, by its freight alone. In Ohio, Kentucky and Tennessee, the iron manufacture is being rapidly developed, with-

out the slightest aid from the duties. The price fell when the duty was high, and it has risen when the duty was reduced. In the last five years the furnaces of Ohio have been nearly doubled, and it will puzzle any one to show that the taxes on iron have been of any benefit to them. Our readers know that we *demonstrated* that the duties on railway iron had no effect on the American manufacturer of bar iron. The railways, in consequence of buying for credit, bought abroad almost entirely; and if they had not they could not have been made.

But, we *demonstrated* another thing, that the stoppage of the unfinished railways, at this time, would *displace* and arrest a large portion of American industry. Now, in the name of common sense, is it more important to *protect* 25,000 men, engaged in manufacturing bar iron, than it is to protect 150,000, engaged in making railways? This idea of *protection* is a two-edged sword, and in this case it cuts much deeper *against* the iron manufacturer than for him.

The *Railway Times*, however, is not satisfied with crying for protection; but assails the motives of those who think differently.—It says that as articles in favor of the *remission*, appeared simultaneously in the RECORD and the *Railroad Journal*, that *somebody* must be very active and busy, and whether successful or not, will hardly discontinue the effort, because a dozen makers of iron don't like it.

But the *Times* goes much further than this, and assails the *motives* of the writer—of the Hon. S. F. VINTON, MR. ASHMUN, and others, because they have done as all other attornies do, attended to the interests of their districts, with whatever ability they could. It charges, that they are to receive 5 per cent. on the duties for this. If they are, we know nothing of it, nor never heard of it. The *Times* should know that such men as VINTON and ASHMUN, cannot be assailed in this way, without more injury to the assailant than themselves. And it ought to know another thing, that protection to American manufactures is not to be maintained by such disregard of great Western interests, and such vain parade of importance to a half a dozen iron establishments on the Atlantic side.

THE BLACK-BAND IRON.

The ore from which the Scotch Pig is made is called *Black-band*, and is deemed very superior. We see a newspaper notice that it has been found in Mahoning county, Ohio.—If it is found in Mahoning, it will certainly be found in other counties; and Ohio will have another variety added to the great number of her mineral resources.

"The identity of what was hitherto deemed a worthless bituminous slate, with the famous Black-band, has been but recently ascertained. Very intelligent Iron Masters, and experienced English, Cornish, Welsh and American miners, have walked, worked, and bored over and through this ore for years past, unconscious of the wealth that lay neglected beneath their feet. A Scotch miner temporarily attached to a blast furnace, recognized his old friend, as flung out from an ore heap by a filler as worthless slate, and speedily had it elevated to the consequence that belongs to this distinguished ore. We congratulate the state of Ohio, and our old friends of Mahoning County, upon the discovery of this source of wealth. It is a richer deposit than the gold in the bosom of California."

Railroads.

CLEVELAND AND ST. LOUIS RAILROAD.

STRAIGHT LINE.

We have before us a copy of "*Facts and Statements*," concerning this road, from which we gather the following:

This undertaking embraces a line of railway extending from Cleveland, in Ohio, to Paris, Illinois, a distance of 342 1-3 miles, being only three miles more than an air line, making the distance between Cleveland and St. Louis, over this line, and Terre Haute and Alton road, 500 miles.

It is formed of two companies, one in Indiana, organized on the 29th day of March, 1853, and one in Ohio, organized July 22d, 1853.

The officers of the respective lines are as follows: In Indiana,

President, Erastus Hopkins, Cleveland, O.; Vice President, W. H. Harding, Indianapolis; Treasurer, O. Brown, Indianapolis; Civil Engineer, E. G. Goddard, Cleveland, Ohio.

Directors: E. Hopkins, Hon. J. A. Wright, W. H. Harding, Hon. W. G. Coffin, John Nulligan, Jesse H. Fordyce, Hon. A. J. Borne, J. W. Dodd, Geo. T. Bateham.

Principal office in Indianapolis.

In Ohio the officers are,

Hon. Israel Dill, President, Newark, Ohio; H. B. Spellman, Secretary and Treasurer, Cleveland, O.; E. Hopkins, General Agent, E. G. Goddard, Chief Engineer, Cleveland, Ohio.

Directors: Hon. Israel Dill, Hon. H. Griswold, Hon. E. A. Andrews, Thos. Hamilton, H. W. Day, H. H. Dodd, F. W. Binkley.

Principal office at Cleveland, Ohio.

The ten miles of the line in Illinois, will be made by a company under the general railroad law of that State; or as a branch of the Terre Haute and Alton Road.

The two principal companies are united in interests, and have had the preliminary surveys made, with the following results:

Total distance to Paris, Illinois	342¼	miles
Straight Line	330¼	"
Contiguous Straight Line	244	"
Continuous " "	188	"
Curvature, maximum	1,432.5	feet.
" minimum	2,865	"
Gradients, maximum. per mile	39½	"
" Level	75.86	miles.

In its course the road will pass through, or within two miles of upwards of 50 towns, cities or villages, and intersect 10 lines of railways in Ohio, and 3 in Indiana.

The amount of stock authorized is $6,500,000. The resources are:

Stock subscriptions	$3,200,000
Future "	1,300,000
First mort. Conv. Bonds	4,500,000
	$9,000,000

Arrangements have been made to commence the work on independent sections, in both Ohio and Indiana, keeping closely within the means of the company. By building thus in sections, having productive connections, the road will be available as fast as completed.

Accompanying the pamphlet is a fine map, showing the location of the road. We commend these "Facts and Statements" to the perusal of railroad men.

MEETING OF THE SOUTH-WESTERN GA., RAILROAD COMPANY.

The regular semi-annual meeting of the President and Directors of the South-western Railroad Company, was held at Macon, on Thursday, 10th August, when a dividend of four per cent., for the last six months, was declared, payable on the 15th inst.

Total earnings of this road for the year ending 1st August, were		$220,251 34
Viz: from Freight	$139,202 10	
From Passengers	75,649 24	
From Mails	6,000 00	
The current expenses for the year		$99,246 13
Net earnings		$121,605 21

From which have been declared dividends as follows:

February, 1854	4 per cent.
August, 1854	4 per cent.

The increase of business over the preceding year. is:

Gross	$80,843 09
Net	44,797 62
The number of bales of Cotton transported from 1st August, 1852, to 1st August 1853, was	38,834
From 1st August, 1853, to 1st August, 1854	105,083

Average number of passengers during the year ending 1st instant, 171 per day, against 106 per day for the previous year.

It thus appears that the business of this most successful road is rapidly increasing, and gives promise of great results in the future.

The passenger trains run now to within ten and a half miles of Americus, and will run into Americus by the 1st day of October next. On the 12th October, the President and Directors of the Company are to meet the people of South-western Georgia at Americus, to consult upon the further extension of the road. In view of the immense advantages to result from an extension into the heart of the great cotton region of the State, and considering that this city has contributed so great a sum to the establishment of the existing railroad line in this direction, we do earnestly hope that the Agriculturists of the South West will appear at Americus at the contemplated meeting in great numbers, with a determination to subscribe with marked liberality. If our fellow citizens below Americus, in the respective valleys of the Flint and Chattahoochee will agree on a line to suit all parties, there cannot be a doubt that the State will extend its aid in such manner as to secure the speedy and full development of a region to which none other in the whole South is superior. We think the planters will come up to the work, for they see that this

great road can pay eight per cent. per annum. Capitalists can no where find a better investment than in the stock of this company. We are proud of its complete success, and gladly acknowledge the obligation of this city to L. O. Reynolds, Esq., President, and the Board of Directors and officers generally, for their good management.—*Savannah Republican.*

MISSISSIPPI & TENNESSEE RAILROAD.

We have before us the first Report of the President, Treasurer and Chief Engineer of this road. The facts embraced in it exhibit a very satisfactory state of affairs of the Company, and furnish a solid ground of confidence in its vigorous prosecution and early completion. Familiar as we were with the zeal and energy of its projectors and friends, and the ability and willingness of the population along its line to make its construction a practical reality, we have been agreeably taken by surprise by finding the enterprise in a greater state of forwardness than we had supposed it to be previous to reading this exposition.

The line of this road, as located, is thus designated by Mr. Meriwether, the Chief Engineer:

"Commencing at a point selected for your depot, on Main street, the location pursues with slight variation, the course of the preliminary survey to the town of Hernando—a distance of 22 miles; where, turning eastwardly, it approaches the head of Nip-and-Tuck creek, where it descends to Cold Water river. Crossing this, and bearing slightly west to avoid the high ridge between Cold Water and Hickahalee creek, it crosses the latter, and pursues a southeasterly course on an almost unbroken line of 18 miles over the elevated plateaus of Panola county to the head of Lofton's creek, four miles south of Sledgeville. Descending Lofton's creek to the Tallahatchie river, a favorable point is found for bridging the latter at Sue's Bluff.—From this point the location ascends Duke's creek to the summit of the highlands dividing the waters of Long creek and Tallahatchie, and crossing this summit in what is generally known as the 'Robinson Plantation,' it descends Bradford's creek, a tributary of Long creek, to the valley of the latter, passing about a half a mile west of General Rayburn's. It has not yet been extended beyond this point.

"Of the entire line, there will be 9¾ miles in Tennessee, and almost 87¼ miles in Mississippi, of which 31½ miles are in DeSoto county, 28½ miles in Panola, and the balance 27¼ miles, in Yallabusha county."

The country throughout the entire route, is one of the most fertile character, furnishing already, an immense agricultural product, and susceptible of the highest degree of development and increase. The eight counties tributary to it had, in 1850, of white population, 60,584, negroes, 50,906, with a product of 89,533 bales cotton, 4,490,899 bushels corn, besides peas, potatoes, oats, rice, etc. This, too, when the season was very unfavorable and there was a "short" crop. The entire length of line of the road between Memphis and Grenada will not exceed 97 miles.

The grades of the road are exceedingly easy, the maximum being 47½, and the curves long and flat, giving capabilities to it not only of cheap heavy freights, but high speed, with entire safety. On the 62 miles already located there are 52 miles 2111 feet of straight line, and 9 miles 3809 feet of curves. The total rise overcome is 822 feet, and the number of miles on which the grade reaches from 45 to the maximum of 47½, is 28. With the improvements which have been made in locomotives, the road, in all practical points of view may be considered almost as on a level. The lateral variations from a right, or an "air-line," do not exceed 1¼ miles.

The estimated cost of constructing the road, with the very best of iron, and in every respect as a first class road, is as follows:

Grading, Bridging and Masonry, including depot grounds, side tracks, crossings of public highways, cattle-guards, etc., 100 miles, at $7,200 per mile	$720,000
Superstructure, including cross ties, rails, chairs and spikes, (105 tons per mile,) and laying track, turn-tables, track-scales, switch machines, etc., for 100 miles of main line and turn outs at $8,500 per mile	850,000
Construction of freight, passenger, and engine houses; machine shop, machinery and tools at Memphis; way depots, water stations, wood sheds, division houses; depot and engine house at Grenada, 97 miles at $1620 per mile	160,000
Equipment, consisting of 10 locomotives and tenders, 4 passenger and baggage cars, freight and gravel cars—97 miles at $1720	167,000
Depot grounds and right of way	23,000
Engineering and contingencies	80,000
Total	$2,000,000

Should iron go down to $60 per ton, this estimate would be less by $100,000. A partial curtailment in equipment, and the temporary substitution of wooden structures for brick work would put the road in operation for $1,700,000. The resources of the Company are as follows:

Individual cash subscription	$534,725
Memphis city subscription—bonds payable in 30 years, bearing interest at 6 per cent., payable semi-annually, for which the city provides a special tax—the proceeds pledged to the purchase of iron	250,000
Tennessee State loan—bonds payable in 30 years, bearing interest at 6 per cent., payable semiannually; principal and interest to be paid by the company, and a first mortgage given to the State on 2 1-3 miles of the road as security for their payment—this also pledged to the purchase of iron	97,000
Total	$882,225

leaving the amount to be supplied from additional subscriptions of cash stock, stock taken to be paid in work, and by a sale of the company's bonds, $717,775. That this sum can be easily raised from these sources, there can be no kind of doubt. The company having voluntarily surrendered the county subscription of $400,000 voted in Panola and DeSoto counties, the validity of which subscription has since been affirmed by legal tribunals, there can be no question but that those counties would, were it necessary, renew these subscriptions, rather than see the road fail, or even lag for the want of means. Memphis, too, we doubt not, would increase her subscription, should the necessity for it become apparent. But we do not apprehend any such necessity for either. From the spirit manifested among the planters along the line, we doubt not a very considerable increase of stock can be obtained, to be paid in work.

But it is more than likely that the success of the work will not depend even upon these means. Contractors of the very first character for solvency and respectability, are understood to be willing to undertake the work, taking one-half this deficiency in stock, and the balance in bonds of the company.

The Mississippi and Tennessee road is destined to form a link in the great North and South road, leading from St. Louis on the one hand, and the Lakes on the other, to New Orleans. A line drawn between these two places, passes by the Iron Mountain, through Memphis, and very nearly covers Grenada and Jackson, Miss. The distance, by this connection, between these two points, would not exceed 530 miles, of which 400 is already under contract. That it will be the *first* great North and South road opened up entirely through, is not doubtful, throwing upon the Memphis and Tennessee road an immense amount of traffic and travel over and above the large local business which has demanded its construction.

Contracts have been closed for the entire work for the first fifty miles out from Memphis. The grading has been let with the exception of thirteen miles, to Pope & Crandal, of Atlanta, Ga., and four miles nearest town, to Col. W. D. Ferguson, in short sections to wealthy planters on the line. The bridging, trestle-work, masonry, bridging Tallahatchie, cross-ties, and laying track, has been let out to Mr. Crandal, an experienced contractor of Chattanooga. An additional ten miles, making the first sixty miles out from Memphis, will soon be let out, and every energy of the company will be exerted to have it completed at the earliest possible period.—*Memphis Eagle.*

FRENCH'S RAILROAD BETWEEN WASHINGTON AND ALEXANDRIA.

We subjoin the following from the Washington Correspondent of the New York Herald. Too much credit cannot be awarded to Mr. French for the restless energy and untiring perseverance which he has displayed in this enterprise, and to which alone is to be attributed its success. We trust that it may yield him an ample return for his labors.

"Among the important bills passed by Congress at its session, just closed, was authorizing an extension of the Alexandria and Washington Railroad into the District of Columbia, to connect with the Baltimore depot.—This gives a continuous line of railroad between the North and South. The projector of this road is Jas. S. French, Esq., a popular and influential Virginian, who, by the the most indomitable perseverence and energy, has now the control of this improvement. The various rival interests which have been contending for it is proof of its value and utility. Not a bill before Congress has been fought with more unceasing opposition, from its incipient step to its final passage, than this. We wish all success to its enterprising and talented projector.

The directors of the new road are among the most respected and influential citizens of Washington, including ex-Mayor Maury, Robert W. Latham, Esq., the banker, and others of like character. They have published a card inviting subscriptions to the stock of the company, under the charter granted by the state of Virginia at its late session. The time is limited for the construction of this road to two years, I believe; but the remarkable go-aheaditiveness of the projector warrants the opinion that it will be "put through" in a much shorter time.

ANNUAL REPORT OF THE INDIANAPOLIS & CINCINNATI RAILROAD COMPANY.

The undersigned submits to the stockholders of the Company a full exhibit of its condition and affairs, embracing its operations since first of December last, when the running of cars had well commenced, to the first of July last. This exhibit is the result of a very careful and thorough examination and review of all the affairs of the Company since its organization, and the results compare accurately with the books of the Company; and give a reliable and full view of its concerns.

Dr. Indianapolis & Cincinnati Railroad.

To amount of Stock in Road paid for	$1,213,723 38	
To 1st Mortgage 7 per cent. Bonds	500,000 00

		542,165 30
Deduct proceeds of Lands pledged for payment of Real Estate Bonds		200,000 00
Leaving applicable to Floating Debt		$342,165 30

The required increase of equipment, and expenditures for ballasting Road, and building Depots, etc., have added beyond our expectations to the debt of the Company; an experience which seems to have been usual in our country, where our roads are pressed into use, as soon as the track is laid down, and along the route of which new villages and business stations are springing up constantly, requiring accommodations.

As will be seen above, the gross receipts for seven months, including the Summer, the most unproductive months, and a month in the Winter, in which (an unusual occurrence) the river was frozen, were $145,947 80, or nearly $21,000 00 per month. Had the uniform tariff of Freight, recently established by all the railroads centering at Indianapolis, been then in operation, the receipts on the same amount of business would have been about $24,000 00 a month, without increased expenses; so that the receipts for the ensuing year, which will include the Fall, the most productive months, ought to average much larger, while the expenses, from the greatly improved state of the road, the experience of officers and hands, and better Depot accommodations, may be expected to be largely diminished.

The expenses for transportation during the seven months, has been $70,868 56, or about 48 per cent. of the gross receipts.

Although the net earnings of the road, after paying the interest on all except the Real Estate Bonds, which is a charge on the lands, have been $41,809 24—about 3½ per cent. on the capital stock—still as they have been used for the road, and payment of debts, it has been thought best to make no dividend until January next.

The result of the first few months operations, commenced in the winter, when the road was but partially ballasted, along a route to which the business of the country to be affected by it, had to be gradually conformed, affords very satisfactory evidence of the reliable character of the estimated productiveness of our road. The number of promising villages and business stations, and of saw and grist mills, and other manufacturing improvements already erected, proves that the expectations formed of the value of the local business of our line, are so abundantly realized.

T. A. MORRIS, Pres.

Office Indianapolis & Cincinnati Railroad,
Lawrenceburgh, August 21, 1854.

HENDERSON AND NASHVILLE RAILROAD—OFFICIAL REPORT.

We gladly give place to the following, from the *Green River Whig*, contradicting, as it does, the report in circulation that this road was about to suspend operation.

We have been furnished a printed copy of the joint report of the Presidents of the Henderson and Nashville, and the Edgefield and Kentucky Railroad Companies, showing the present condition and future prospects of the work on the line. We condense a statement of the principal facts presented. The work of construction is carried on upon these two roads under separate charters. When completed, the two roads, meeting at the Kentucky State line, will, by virtue of a contract entered into between them, become one road, under the name of the Henderson and Nashville Railroad. The total length of the road as located from Henderson to Nashville, through Hopkinsville, Trenton, and Springfield, is 143½ miles. The present resources of the companies are put down as follows—from Henderson to the State line;

Individual subscription	$325,000 00
Already earned—contractors' stock	30,000 00
Right of way secured throughout, including depots, mostly additional stock	35,000 00
Todd County bonds relied upon	100,000 00
Christian	150,000 00
State line to Nashville, individual stock	250,000 00
Davidson county bonds	200,000 00
State aid $10,000	480,000 00
Total resources	$1,550,000 00
Cost of road, including equipment, as shown by Engineer's report	4,183,966 00
Balance required	$2,633,966 00

There are upwards of $100,000 expended on the Kentucky portion of the road. A contract has been entered into with Van Bergen, Ward & Co., to construct the entire road, upon the following payments: one-third, cash and county bonds; one-third, bonds of the companies. It appears from the above statement of their resources, that the companies have provided means to fulfill their part of the contract. The contractors will require the bonds of the companies to the amount of about $1,394,655. The security offered to capitalists for the payment of them is $1,650,000, secured in various ways along the line, and the right of way and depot grounds, secured through, in addition to the paying capacity of the enterprise.—[*Nashville Whig.*

In the above statement, we are sorry to say, the sum of two hundred and fifty thousand dollars must be subtracted—Todd and Christian having failed to come up to the mark. But, we confidently believe the work will go on, and that sufficient capital is already invested to secure the completion of the road.—Stock-holders must be punctual, and meet their instalments as they fall due. If they will do this, with the increase of stock, which can be procured by a proper effort, it will "keep the ball rolling," and in the course of a reasonable period, the road will be in operation. Falter not—fail not! stand up to the rack, and show yourselves TRUE Kentuckians. Our friends in Tennessee, have commenced work, as we are informed, and will give us a close race for the State line. Then, onward! onward!!

TUSCARAWAS BRANCH RAILROAD.—The Tuscarawas Branch Railroad from Bayard to New Philadelphia is completed to within a couple of miles of Canal Dover, and within four miles of its terminus. The track-layers are spiking down about two thousand feet per day. The passenger train runs only as far as Waynesburgh, but in the course of a week will run to Canal Dover. The whole road will be in running order before the first of September. The road is built in the most substantial manner, and can be run with speed and safety. The bridge over Tuscarawas river, at Dover, will be thrown across very soon, as we learn from the builder. The abutments and masonry have been completed some time since.

The first eighteen miles of the road is down the midst of a wide and delightful valley, passing a village at every two or three miles, then comes a couple of miles as grand and picturesque as the scenery on the New York and Erie road. Hills are cut down, valleys filled up, a high ridge penetrated by one thousand feet of tunnel, graceful curves avoiding obstructions, and then the road sweeps out of the hill country into the valley of the Tuscarawas, skirting along between the river and high bluffs, for a few miles into the New Philadelphia plains. The road-way cuts through coal-banks, ore-banks and stone quarries. In one place is a deep cut of some 60 feet where a 4 foot vein of coal can be seen cropping out of the cut on either side, 20 feet above the roof of the cars. Iron ore abounds along the track of the road, for at least ten miles, and stone coal a greater distance. Considerable transportation will come from these sources. One of the finest sandstone quarries in the state looms above the road-bed.—The stone can be rolled from the quarry on the cars at a rod's distance.

Were it not for a partial failure of the crops, a heavy produce transportation would pour over the Tuscarawas Branch Road this fall. Considerable freight and travel, however, will be done upon it this season.—[*Cleveland Leader.*

REGISTRY OF SHARES.

The late astounding disclosures of frauds by transfer agents, have aroused the attention of railroad companies, and it is a serious question, amid regrets for the past, to determine the proper course for the future. It is plain that the system heretofore adopted, as it has been pursued, is defective in the extreme, and additional checks and safeguards must be placed around the transfer of stocks. It is also a gratifying fact that the confidence reposed in the officers and managers of our prominent companies, is still unshaken. Had it not been for this unswerving trust, the circumstances that we have to regret could never have transpired, and it is more a desire to protect against future abuses than the fear of present danger, that is leading to the surest basis of confidence —an unerring system of checks and safeguards. The Cleveland, Columbus & Cincinnati Railroad Company have appointed a new officer connected with the transfer of their stock.— Soon after the publicity of the late frauds, the Transfer Agents of this company, in New York, requested an examination, and accordingly the Board appointed a person in whose integrity and ability they could rely. After a most patient and thorough investigation in which every certificate was traced from its issue to its return or present owner, it was satisfactorily ascertained that in this company there had been no abuse of power. Hereafter the certificates will have the signature of a registrar as well as that of the agents. The book of certificates is first signed in blank by the President, it is then entrusted to the registrar. Whenever then, it is desired to obtain a new certificate, the old one is presented to the Transfer Agent, who satisfies himself that it is genuine and in due form, and after subscribing his name and the date, appends to it the name in which the new one is to be made out; it is then presented to the registrar who also examines, and if found correct cancels it and makes out the new certificate in due form and passes it to the Transfer Agent. It is then countersigned and delivered to the proper party.

Each office records its transaction and makes its report to the Company at stated periods, accompanied with the cancelled certificates.

If this system is carried out, or some other equally efficient, it will tend greatly toward restoring that healthy tone of feeling in our trans-Atlantic neighbors which has hitherto aided so efficiently in the construction of our roads.

Subterraneous Rivers in Florida.—A writer in the Floridian and Journal says the upper stratum of Florida rests on one vast network of irregular arches of stupendous magnitude, through which inumerable rivers, creeks, and mineral waters, in silent darkness perpetually flow. Wakulla, Ocilla, Warcissa, Crystal, Homosassa, Chesiouitdska, Wickawatch, and Silver Spring are the principal rivers. The creeks of this denomination are too numerous to mention; most of them afford fine mill-sites.

They are too, partly or wholly navigable for the smaller class of steam and sail vessels through out the entire distance of their subterraneous courses. Those that are not, can be made so, with comparatively small trouble and little expense.

In view of the gloomy prospect of having railroads to any great extent in Florida during this generation, the writer thinks it wise to clear out these subterraneous passages, connecting them by canal-cuttings with the open or navigable parts of the rivers.

They are numerous, and can be made efficient for one hundredth part of the expense and trouble that would be required to build rail and plank roads to effect the same amount of service.

OPERATING LOCOMOTIVES BY CONTRACT.

At first view this would seem a novel and almost impossible task, attended with many unnecessary intricacies and upon the whole a subject of so much trouble and inconvenience as not to be worth even the risk of an experiment. Yet such is not altogether the case, as the following extract from the American Railroad *Times*, relative to the success of the scheme in Great Britain would seem to indicate:

"So far as has been tried the result is extremely favorable, particularly is that the case with regard to the experiment made by the manager of the London and Northwestern line, one of the wealthiest corporations in England. Their contracts are such that all their employees are beneficially interested in the results of their own labors and their actual wages, if they can be called such, are dependent to a great extent upon the success attendant upon their own endeavors. For instance, the company has entered formally into contracts with their engineers for running the locomotives. They pay them so much per mile for the train, sell them the fuel, oil, grease, etc., at prime cost, in sufficient quantities for the distance run and the time employed in running it, and allow them as profits all that they can save by economy and skill. The engineer pays a fine for every moment of time lost through his own fault, and thus is interested in getting his train in, in season and safety. It is said that the plan works well, the engineer being anxious to be frugal in the management of his materials while he is punctual in time. The engines are kept in better repair and much more apt to be ready for service. A writer in the London *Times* thinks that companies in England would save seven hundred thousand pounds sterling a year by the universal adoption of this plan. It is likewise thought that a better guard would be kept against accidents, where a man's own profits will be diminished by the results of his own carelessness."

The Tuscarawas Extension of the Cleveland and Pittsburgh Railroad is now being run over as far as Canal Dover, whence stages run to New Philadelphia.

Blue Ridge Railroad.—We are glad to hear that the affairs of the Blue Ridge Railroad are in a prosperous condition, for we regard this road as the most important enterprise extant. Its completion will not only develope a large section of country unsurpassed for its wealth, and the extent of its resources, but it will give to the mighty West an outlet for its multiplying productions.— Not only this, but it will give the business of the whole country an impetus, and therefore we feel a deep interest in all that pertains to this enterprise. Southern States have heretofore been exceedingly backward in all matters pertaining to internal improvements, but they are now awakening to the great importance of the system. We recollect commending the annual message of Gov. Manning, of South Carolina, as being fully equal to the spirit of the age, and we hope that the interests of that state will not suffer from laxity or indifference on the part of its government, South Carolina, by its locality and natural advantages, is fully entitled to an immense Western trade. If she does not provide the facilities for cultivating such trade, it will of course be diverted elsewhere. But the Blue Ridge Railroad will secure to the State the tribute which justly belongs to it. A road has been surveyed, and we believe contracted for, commencing at Knoxville, Tennessee, which is to be the Western terminus of the Blue Ridge Railroad, and terminating at Paris in Kentucky. From the last named place to Cincinnati a road is already completed. This will bring Cincinnati in immediate connection with Charleston, and by a route one hundred miles shorter than any other. The importance of this connection is not the subject for speculation; it is an absolute necessity.—*Wall St. Journal.*

VERMONT CENTRAL RAILROAD COMPANY.

The report of the investigating committee of the Vermont Central Railroad Company, gives the losses of that unfortunate and abused corporation as follows:—By fire, $98,553.98; by freshet, $32,803.06; by S. F. Belknap, $500,000; by forfeited stock, $369,858.67; by loss on bonds, $528,556.18; by interest, $763,957,68; by Vermont and Canada road, $252,583.44; by Josiah Quincy, Jr., $295,205.46—total, $2,841,517.17. It is supposed that when all the floating debt is paid and the small issue of bonds taken up, the corporation will stand with stock of $5,000,000, and bonds $3,500,000. Mr. Parrott's appraisment of the road and equipment gives a value of $5,265,000. In other words, the road, instead of costing $8,500,000, should have cost but $5.265,000. During the year ending July 1, 1854, the gross earnings of the Central and Canada together were 16 per cent. on what should have been the cost of the former, and more than 12 per cent. upon what should have been the true cost of both. With honest and capable management, therefore, the Central can earn its interest on $3,500,000, and a fair dividend on the stock, reckoned at $20 to $25 per share.

☞ The Connellsville Railroad is said to be progressing rapidly in grading

NEW AND CHEAP ILLUMINATING GAS.

The following discovery of a new process in procuring Gas, will, if finally proved practicable, be of great importance. Cheap light and cheap power are among the things most useful in the arts. It is thus noticed in the *Mining Journal:*

"This machine for the production of hydrogen gas by means of electricity, with which experiments were recently made in the presence of the Emperor and and Empress, is the invention of a Mr. Sheppard of London. It consists of a number of magnets in connection with reels of copper wire, one end of which is inserted in vessels of water into which is introduced a composition for rendering the gasses non-explosive. Upon the turning of a wheel, so as to give a flow of magnetism through the wires, the gas is quickly evolved and gathered in a gasometer, which is so constructed as to enable persons to see the gas rising within it. The gas procured is peculiarly pure and of good illuminating power, and much less expensive than the present coal gas. But cheap light is not the only advantage expected to be derived from this invention, as it is proposed to drive locomotives by it, and arrangements have already been entered into in England with several railway companies for a trial of its capabilities on their respective lines.

IMPROVEMENTS IN BLASTING MINES.—Capt. Norton (England) has lately invented a cartridge for the purpose of blasting in mines without danger, by frictional appliances. The exploding cartridge is the same which he has projected for danger signals on railways. In that case it was to be thrown in the air by a strong arm or propeller; for the purpose of mining, a common wine-bottle, charged with blasting powder, can be used. The cork, with the frictional twisted wire passing lengthways through its center, having four of Bell's gas-congreves tied firmly round the twisted wire, with their heads towards the inner end of the cork, and the cork being pressed by the instrument for that purpose, makes it enter easily into the neck of the bottle, which then, by swelling out, holds fast, and is perfectly water-proof. Experiments have been practically demonstrated at Spike Island, with the permission of the Board of Ordnance, and lately at Hill Barracks, in the presence of Colonel Swyny, and the officers and privates of the 63d regiment. Captain Norton is likewise favorably known, owing to several improvements he has made with rifle-cannon and other fire-arms.

ELECTION OF PRESIDENT OF THE CLEVELAND & TOLEDO RAILROAD.—At a meeting of the Board of Directors of the Cleveland & Toledo Railroad Company, held on the 6th inst., Henry Martin, Esq., of Buffalo, was elected a Director and the President of said company, in place of Hon. S. F. Vinton, who gave notice of his resignation some months since.

Railroad Items.

☞ Mr. I. Newton Perkins has been elected President *pro tem.*, of the Illinois Central Railroad Company. Mr. Perkins is a valuable accession to the management of this Company.

☞ Mr. Nicholas Dean was, on Friday, elected a Director of the Harlem Railroad Company, and will probably, during the week, be elected President, vice Mr. Wetmore, who will resign.

AGAINST THE RAILROAD.—The people of Copiah county, Miss., by a vote of 326 to 417, have refused to make a county subscription to the New Orleans and Jackson Railroad.—*Memphis Eagle, Aug.* 10.

☞ The Bastrop (Texas) Advertiser says that there were 230 laborers at work on the Pacific Railroad, at last accounts from Marshall, and fresh arrivals were constantly increasing that number At the present time the number of laborers must be about 400.

☞ The citizens of Deca'ur Co., Iowa, have held a meeting to devise means to further their claim to an extension of the Fort Madison & Bloomfield Railroad, through the southern counties to some point on the Missouri.

☞ We learn from the Selma Reporter that the occasion of the first trip on the Alabama & Mississippi River Railroad, afforded a very pleasant and agreeable excursion, and was participated in by many of the prominent citizens.

MISSISSIPPI, OUACHITA & RED RIVER RAILROAD.—This road was inaugurated at Camden, on the 4th inst., with the usual ceremonies, public addresses, breaking ground, etc. Though local in its character, this work will be one of immense benefit to Western Arkansas and Eastern Texas, and we trust its friends will find the means necessary to its speedy accomplishment.

BUFFALO & GODERICH RAILROAD.—We understand that the final arrangements were made a few days ago by the Contractors, to complete and have in running order, within the course of the year, the whole distance to Stratford. This announcement will be hailed with much satisfaction by every one interested in this important work. Its extension to Goderich will be accomplished next season.

CHICAGO & ROCK ISLAND RAILROAD.—We learn from the Chicago Democratic Press that there has been a serious strike among the Engineers of this road, arising from a determination of the workmen to uphold one of their number in a breach of orders. But through the energy of the Superintendent and the courtesy of the neighboring road, the business of the road was not interrupted.

OHIO & MISSISSIPPI RAILROAD.—H. D. Bacon, Esq., of St. Louis, has been elected President of the Western Branch of the Ohio & Mississippi Railroad. Of the Eastern Branch, Jas. C. Hall, Esq., of this city, is President. With so good a team at the two ends, the union must soon be formed at the center, and St. Louis and Cincinnati meet together in local and commercial harmony on the "Broad Gauge" principle.

CLEVELAND, COLUMBUS & CINCINNATI RAILROAD.—This is considered one of the most prosperous railroads in the country. Its earnings for July, as given in the Cleveland Herald, are as follows:

Earnings for July, 1854	$93,608 14
" " " 1853	88,006 31
Increase	$5,601 83

COVINGTON & LEXINGTON RAILROAD.—This road is now opened to Keiser's Mill, in Bourbon county, a distance of 74 miles from Covington, and the work is progressing steadily to completion.

Passengers now leave Lexington at 7 A. M., leave Keiser's at 11:20 A. M., and arrive in Covington at 3:15 P. M., in time to take the 5 o'clock P. M. train for the East.

NORFOLK & PETERSBURG RAILROAD.—In addition to the connection between tide-water and the West canal, Norfolk is to have a railroad intercourse. The commissioners to lay damages for land on the above named road are about to report. The South Side Railroad, from Petersburg to Lynchburg, is nearly completed to the latter place, and this connects with the South western Road to the Tennessee line, at which point other roads are stretching to the West and South.

QUEBEC & RICHMOND RAILROAD.—We have authority to announce that the entire line of railroad from Quebec to Richmond will be opened for traffic and travel on the 2d of October; on and after which day regular trains will traverse the road, between Montreal, Richmond, Quebec and Portland. Trains already run over the entire line, but some portions of the work remain to be done, to put the line in permanent working order. The distance from Montreal to Quebec by this line is 172 miles. The distance from Quebec to Portland via Richmond, is 320 miles.—*Montreal Pilot.*

SURVEY OF THE CAIRO & FULTON RAILROAD.—We are gratified to be able to inform the public, on the authority of Capt. Williams, Chief Engineer, that the surveys of the Cairo and Fulton Railroad are completed, and that they will be reported so soon as the estimates, plans, maps and profiles can be made.

We learn also that the route of this road runs through a country remarkably well adapted to railroad construction, that it will be very direct with light grades, and that the cost of construction will not exceed, and may fall below, the average of Western roads.—*Little Rock Democrat.*

THE AIR LINE RAILROAD BETWEEN BOSTON AND NEW YORK.—At the Stockholders' meeting last week, a report was presented from the directors showing that the whole line between New Haven has been consolidated. The late Legislature of Connecticut, almost unanimously passed a resolve authorizing the Company to accept the offer of the British capitalists to take $1,500,000 of the stock and $2,000,000 of the bonds of the road. The grading and work on the road has been done for a double track, and is of the most substantial and permanent character. The amount of capital stock subscribed is $525,250, and $237,821 29 have been expended on the road

MISSISSIPPI CENTRAL & TENNESSEE RAILROAD.—The celebration at Bolivar on breaking ground on the Mississippi Central and Tennessee Railroad, connecting that place with Jackson, came off on Tuesday of last week. About three thousand persons were said to be present. Speeches were made by Judge Milroo Brown, Dr. A. Jackson, John V. Wright, and Mr. McCrary, after which the large assembly partook of a sumptuous barbecue.

The depot at Jackson has also been located, in the western portion of the city, not far from the residence of Mr. James Caruthers, and on his land—which event was celebrated there by a brilliant illumination.

EXCURSION TO PORTLAND.—The Managers of the Grand Trunk Railway have matured a plan for an excursion to Portland during the week of the great Industrial Exhibition, which will certainly prove one of the most interesting excursions of the season, and a creditable wind-up to the highly successful excursion season of 1854. Trains will leave Montreal on Monday, the 18th September, and tickets will frank the holder to Portland and back again, any day on or before Monday, 25th of September. Excursionists will then have the opportunity of visiting the White Mountains, to which crowds of people go from the sea-board cities of the United States, and the Portland Exhibition, with the advantage of a week's sojourn in these agreeable places.—*Montreal Pilot.*

OHIO & INDIANA RAILROAD.—This road is now finished to Van Wert, and passenger trains running every day to that place. The first trip was made on Friday the 25th ult., on which occasion there was a number of invited guests, who were received by the good people of Van Wert, in a kind and hospitable manner. At night the people of that flourishing little town had a general "good time" in manifesting their rejoicing at this new and important epoch in her history, in the way of music, bonfires, etc. In the morning, when about to return, the ladies of Van Wert presented the Engineer with a beautiful flag in honor of the Locomotive "Van Wert," in a neat address, which was happily replied to by the Engineer.

This road is said to be doing a fine business, and when finished to Fort Wayne, which will be in a few weeks, will be a great thoroughfare.—*Richland Shield & Banner.*

ONTARIO AND HURON DOUBLED IN ONE DAY BY WAY OF THE NORTHERN RAILWAY.—Until yesterday, Aug. 25th, the journey from Lake Ontario to Lake Huron and back was never performed by any individual in one day—although in a few weeks, when the railway will be completed, the feat may easily be accomplished by any one in about six or seven hours. Mr. Fleming, Resident Engineer, started with the usual morning train at 7 o'clock, for Barrie, connected with the iron train running from thence as far as the rails are now laid, thence on horse-back along the graded road, and on foot through swamps of Collingwood Harbour—and returned in a similar manner, after spending an hour on the water, examining the Harbour works, arriving in Toronto at half-past nine the same evening.

Distance traveled by rail	170 miles.

MONETARY.

In New York there is a growing stringency in Money affairs, though the supply of capital is undoubtedly large; yet the unsettled condition of finaucial affairs renders capitalists very cautious in their investments. We find quotations about as follows: On call, 6@7 ℔ cent.; short business paper 10@12 ℔ cent.; longer number one paper, 12@15 ℔ cent.; railroad securities, 15@24 ℔ cent.

In the Stock Market there has been a decided improvement, but how long it will continue is a matter of uncertainty. The fluctuations which have characterized the market for some time past, will doubtless continue for some time. The low figures which some of our rail road stocks have reached have induced many purchasers; but stability in the market must result from a feeling of entire confidence. State loans are in less demand.—The recent loan of the state of New York was taken at 112½@116¼. Sales of the same have since been made at 114½.

Foreign Exchange is active at 109@109½.

The sales of Stock at auction have been as follows:

By A H Nicolay, Sept. 4—

$5,000	Bonds	Ohio & Miss. 2d mor. 7s. conv. '80		$56 50
5,000	"	" " " " "		54 00
9,000	"	N. Y. & Harlem, 7s. '73		02 56
5,000	"	" " "		82 00
1,000	"	Tol., Nor. & Cleve., 7s. '73		82 50
5,000	"	N. Y. & N. Haven, 7s. '66		79 50
3,000	"	Flushing Railroad, 7s. '68		61 00
5,000	"	" " "		60 25
150	Shares	Galena & Chicago Union RR		87 60

The above bonds were all with interest.

By A. H. Nicolay, Sept. 7th—

$1,000	Bonds	Ills. & Wis. 7s., conv. '73	$35 00
2,000	"	" " " "	30 00
4,000	"	" " " "	26 00
5,000	"	Gal. & C. Union, 7s. const. '68	88 25
5,000	"	" " " "	87 75
10,000	"	Ohio & Miss., 2d mor., 7s. conv. '80	60 00
5,000	"	" " " "	59 75
2,000	"	N. Y. & Harlem, 7s. '73	82 00
1,000	"	" " "	81 87½
2,000	"	" " "	81 75
5,000	"	" " '66	80 00
5,000	"	Scioto & Hock. Val. 7s. '65, conv.	51 00

All the above with interest.

At the West we have to note an increase in the rate of interest. Prime paper having been done at 1¼ ℔ ct. ℔ month. This stringency acts against second rate paper, and makes such difficult of negotiation.

The rule adopted by our bankers relative to foreign issues has been generally enforced, which has tended to increase the amount of Ohio and Kentucky funds in circulation. Virginia funds, though refused by the bankers, in less denominations than $10, still pass current at a very small discount. After the 20th inst., the issues of Indiana will be uncurrent under $10's. What we shall then do for currency is difficult to say, though we have little doubt that all foreign issues will pass as readily as now, because the business of the community will require it, as our legislators, wise as they were, were not sapine enough to see the necessity of supplying a circulating medium to fill the place of that legislated out of existence. As to specie currency, the present rate of Exchange will prevent any remaining in this section.—Business generally is dull, though had we a river communication we might expect a heavy business at this time.

Miscellaneous.

THE DEEPEST ARTESIAN WELL IN THE WORLD, AT BELCHER'S SUGAR REFINERY.

ITS MYSTERIES EXPLAINED.

We were fortunate enough to direct our steps towards Belcher's immense Sugar Refinery on Saturday last, (says the St. Louis *Democrat*,) for the purpose of making some observations of the great artesian well, which is now being bored at that place. Fortunate, we say, for we never spent an hour more to our interest and profit than the one employed in witnessing the operation of the digging, and learning the history and progress of the work.

This well was commenced about six years ago by Mr. Belcher, his object being to secure for the purpose of his large Refinery a supply of pure water. For six months the operations were continued by hand, and reached a depth of some two hundred feet below the surface, when it was found necessary to employ the agency of steam with suitable machinery.

Since the application of steam the work has progressed steadily and persevereingly until the present time, when the incredible depth of *twenty-two hundred feet* has been reached.—This is said to be the deepest artesian well in

the world. One of the most important that we now remember of, is that of Grenelle, near Paris, in which operations were continued for eight years, and which was sunk to a depth of *nineteen hundred and sixty-one feet* below the ground. And we believe there is another somewhere in France which numbers about twenty-one hundred and fifty feet; but none have yet reached the distance into the bowels of the earth that this of Mr. Belcher's has.

We do not know that this wonderful enterprise was commenced with any anticipation that so much time and expense would be consumed in its completion ; nor are we advised that it was originally proposed upon any geological theory, leading to the belief that the stream of water desired would be found at any particular depth or between any supposed strata of rocks ; yet having undertaken the work, the subsequent energy and persistence of labor, reflects the highest credit upon him for whose benefit it is designed. Success in the boring of artesian wells must always be of a problematical kind—even where there is the most accurate knowledge of the geological character of the region of country in which the enterprise may be undertaken, for however certain theory may be regarded,there are yet certain unknown conditions in the formation of the different underground strata which may render success impossible.

In the present instance the most formidable impediments have met the operation.—From the surface to the extremest depth, the drill has met with a constant succession of the most stubborn rocky formations, with the single exception, however, of a strata of soft slate stone, about 100 feet in width, at a depth of about 1000 feet below the surface. The last formation penetrated by the drill is a yellow sandstone.

What further conditions or impediments are yet to be encountered we are not enough of a geologist to theorize upon, yet whatever they be, the steady perseverence in the work for a period of six years would seem to warrant the belief that the enterprise will not be abandoned until absolute impossibility meets its operations.

The work first begun with hands, was carried on by means of a spring pole, with the drilling rods and the drill attached to one end, and working up and down.

Since the application of a steam engine of about twenty-five horse power, the rods and drills are made to work in a vertical direction, the same as with hands, from the end of a large beam, which has a two or three foot stroke.—The width of the bore is five inches. The kinds of drills used are various, some being adapted for pulverizing the rock, others for hooking up soft substances, and then there is an instrument called a rimmer, used for cutting the sides of the bore to make it round and smooth. Tubes are also used, containing valves, which catch the loose particles of rock and carry them to the top of the well. The drilling rods are made of stout oak wood, are about two inches in diameter and about thirty-two feet long, having iron screws and fastenings at the ends, by which a continued rod may be formed of any length.

The presence of one or more persons is constantly required for the purpose of turning the drill around in the bore, as its vertical motion continues. At present the operators are engaged in enlarging the cavity at the point where the soft slate stone occurs, for the purpose of introducing a copper tube to prevent the continual caving in of soft particles which are constantly sloughing from the sides. We are told that this falling in of the blue slate stone had left a cavity as large perhaps as a good sized house. We believe it is the intention to introduce copper pipes from the top to the bottom of the well, as soon as it is finished, although the hard, rocky sides would seem to make it unnecessary. The object to be gained by this is to shut out the various kinds of waters from the sides,so that the pure stream from the bottom may reach the top without any mixture.

At the depth of 700 feet a vein of salt water was struck, and at 1,500 feet an immense vein of sulphur water burst forth, which has been running ever since its discovery in a large stream from the mouth of the well. This water is the same as that of the Blue Lick Springs, in Kentucky, and possesses a purity and freshness of taste quite superior to that which reaches us in barrels and casks. It is carried off by a large sewer, leading to the river. It seems too wasteful that such profuse quantities of this celebrated water should be permitted to flow away, but the Refinery needs the clear, unadulterated element, and it must have it and nothing else. Other medicinal waters have been discovered, we believe, but they have been of little consequeuce.

We are indebted for all our information in regard to this well, to the exceeding kindness of Mr. John M. Brown, who has superintended its boring for a long time. Mr. Brown, we believe, has a large experience in this business, having assisted at the boring of several wells in the state of Virginia. He is very satisfactory in all the information he imparts.

This well is indeed a great wonder, and must, in time, as the deepest in the world, become famous. There is no calculating when the desired vein of water may be reached, but when it shall be tapped there is every reason to believe that the force of the stream upward will be immense.

Suppose that the vein may have its foundation head, (and there is no extravagance in the hypothesis,) somewhere in the peaks of the Rocky Mountains at the altitude of 1000 feet and by a dip of the strata of rocks between which it is contained, it lies 2500 feet below the surface of the ground at this point of the earth's surface—then on the principle that water must find its level, or that the stream will rise as high as the foundation, the water will burst forth with a force sufficient to carry it to the height of a thousand feet, excepting of course the diminished force that would be induced by the friction of the stream against the sides of the bore—though still the great pressure of the earth at the depth of 2500 feet would equal or perhaps more than counterbalance the impediment of the friction.

We are anxious that the enterprise may soon be consummated, and yet our curiosity induces to an expression of the wish that the drill may still penetrate many, many feet more toward the unknown regions below.

POPULATION OF GREAT BRITAIN.—The number of the effective population of Great Britain, between the ages of 20 and 60, is 10,-082,296, and the number of persons engaged in agriculture is 1,877,960. In France the whole population is stated at 35,783,970, of which 20,351,678 are agriculturists.

RAILBOAD STOCKS, AND OTHER SECURITIES.
The subscriber offers for sale—

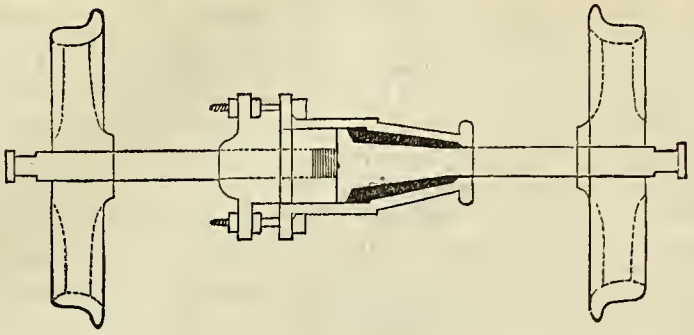
Rail Road Printing.

WE ask the attention of Railroad men to our facilities for doing every variety of Printing needed or used by Railroads. We have taken especial pains to fit up our establishment with reference to this branch of business.



Reports, with or without maps or illustrative engravings, will be gotten up at short notice and in superior style.

Blanks of any description, adapted to the wants of the different departments of Railroad business, and to the wishes and tastes of parties, will be prepared in a style warranted to give satisfaction.

Blank Books, with or without printed headings, ruled to any pattern. Day Books, Ledgers, and every vaaiety of Blank Books, made to order.

T. WRIGHTSON & CO.,
Rail Road Record Office, 167 & 169 Walnut st. Cin.

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it can be refilled, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

SAMUEL L. DENNEY,

Notice of Copartnership.

MR. PETER MARIE. heretofore of the firm of Decoppet & Co., has this day formed a copartnership with Mr. Rudolph Kanz, (for many years with the banking house of Messrs. L. Von Hoffmon & Co.,) under the firm of MARIE & KANZ, at 27 William street. Their attention will be devoted to the purchase and sale on commission of Stocks, Bonds and Foreign Exchanges, and to the negotiation of business paper.

New York, Sept. 1, 1854. [sept. 7-1*

GUNPOWDER,

MANUFACTURED BY

The Hazard Powder Company,

HAZARDVILLE, CONN.

H. G. HAZARD, President.
A. E. DOUGLASS, Secretary.

THE undersigned are always prepared to furnish Mining and Blasting Powder to any extent, delivered at any point on the lines of railroads, or any other places of public improvements in the West or South, at the very lowest rates. Also, SAFETY FUSE of the best Eastern manufacture.

We would respectfully urge all contractors and consumers to call upon or correspond with either of us before arranging for their supplies elsewhere.

To the trade generally we would offer all the brands of Sporting and Rifle Powder manufactured by the above concern. M. D. W. LOOMIS,
Southeast corner Main and Second Sts.
Cincinnati, Ohio.

Baltimore, August 31-†

Pittsburgh, Philadelphia, BALTIMORE AND NEW YORK.

NEW ROUTE OPENED TO NEW YORK, ALL THE WAY BY RAILROAD, VIA **CINCINNATI, HAMILTON & DAYTON RAILROAD.**

The quickest, cheapest and most pleasant route to Pittsburgh, Philadelphia, Baltimore and New York.—Depot in the West end of the city.

Only route via Pittsburgh by which through tickets can be obtained from Cincinnati to New York.

One less change of cars than any other route.

Passengers leaving Cincinnati, on 6 o'clock morning train of Cincinnati, Hamilton & Dayton Railroad, go through to Crestline without change of cars, and, after 30 minutes for dinner, proceed by Ohio & Pennsylvania Railroad, arriving at Pittsburgh at 8 o'clock P. M.: leave Pittsburgh via Pennsylvania Central Railroad, at 9 o'clock, P. M., and arrive in Baltimore and Philadelphia at 12 o'clock and 30 minutes (noon) next day; and from thence via Kensington and Jersey City, or Camden and Amboy Railroads, arriving in New York at 4 P. M.

Second Train:

Leaves Cincinnati, Hamilton and Dayton Railroad at 8 o'clock and 20 minutes every morning; arrives at Crestline at 4:20 P. M., and Pittsburgh at 12 o'clock and 30 minutes, midnight; and after a comfortable night's rest, resume by 7 o'clock A. M. Train, arriving in Philadelphia and Baltimore at 12 o'clock and 30 minutes, midnight.

The only offices in Cincinnati at which Through Tickets can be purchased from Cincinnati to New York, via Pittsburgh and Philadelphia, are under the Spencer House, and one door below the Gibson House on Walnut street.

FARE:

From Cincinnati to Pittsburgh, first class.....			$ 7 00

Keep the most complete stock in the West of every thing used by Engineers. On application, a catalogue with prices will be forwarded. [jy.21-†.

ENGINEERS' & SURVEYORS' INSTRUMENTS!
JAMES FOSTER, Jr.,
MATHEMATICAL AND PHILOSOPHICAL
INSTRUMENT MAKER!
HAVING removed from his old stand to south-west corner of Fifth and Race street, and increased his facilities for making instruments, is now ready to supply Levels, Transits, Theodolites, the Dumpy or Gravatt Level, Circular Protractors of Troughton & Simms model, Surveyors Compasses, Pocket Compasses with and without sights, in great variety. All kinds of Land Chains; Ivory and Box wood Scales of all kinds and graduation; Drawing instruments of all kinds, brass and German silver. Measuring tapes of all kinds, Magnets, Magnifyers, Barometers, Spy Glasses, &c., &c. Repairing promptly attended to. ap.6-6*.

MUSKINGUM WORKS,
ZANESVILLE, OHIO.
DOUGLASS, SMITH & CO.
WOULD respectfully call the attention of Railroad Companies to their establishment at Zanesville They are prepared to execute orders, on short notice, for
Passenger Cars of the most superior description,
Second Class Passenger, Mail Express, and Baggage Cars; Freight, Cattle, four or eight wheeled Gravel Cars.
We manufacture a superior
CAR WHEEL,
Over 2500 of which are now running on the Central Ohio Railroad, and many of these have been in use on the road over two years, having in that time only three to crack, and two to be renewed in consequence of the wearing of the Chill. We have also commenced the manufacture of the celebrated
WASHBURN WHEEL,
And are prepared to furnish this wheel, with or without axles. Also, castings for Cars fitted to order at the shortest notice.
BOLLMAN'S PATENT IRON & WOOD BRIDGE.
We are also agents and builders of the above celebrated Bridge. Are now placing upon the piers an iron bridge on this plan over the Muskingum river at Zanesville. We are ready to contract with companies for the construction of this Bridge. All orders addressed

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to

WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly to the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York, And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

J. B. FORD is the Company's Receiving Agent at Wheeling.

COLUMBUS PIQUA, AND INDIANA RAILROAD.

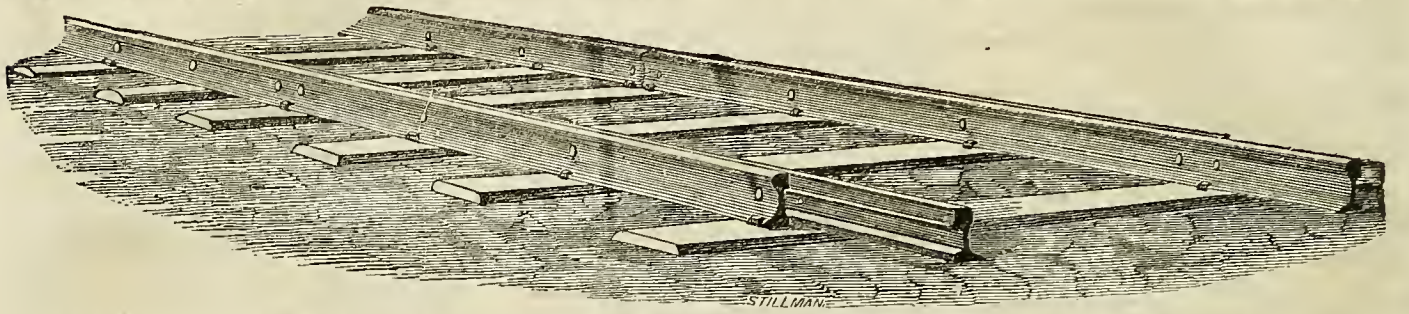
New route from Columbus, West and from Urbana, East.

On and after Monday September 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between COLUMBUS and URBANA. Will leave Columbus at 4.50 a.m., and 3.30 p.m.—arriving at Urbana at 8.12 a.m., and 6.14 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with the night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morning Cleveland and Zanesville trains can have a few hours at Columbus and leave by the 3.30 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton and Cincinnati.

The 9.15 a.m. train from Urbana connects with the morning train from Cincinnati and Dayton that arrives at Urbana 8.40 a.m.—arriving at Columbus at 12.05 p.m in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Sandusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibuses will connect with the trains at Urbana for the conveyence of passengers to and from Piqua and Greenville over a good Macadamized road.



A. G CONOVER, Sup

RAILROAD IRON, LIGHT WEIGHT.

470 TONS, 47 lbs. per yard, good quality and pattern, now lying at New Orleans. For terms apply to VOSE, PERKINS & CO.,
ap27-tf New York

WINSLOW'S
PATENT COMPOUND RAIL.

THIS RAIL, which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a

THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are—a saving in the wear and tear of Machinery—it saves, to a great extent, in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable Being practically a continuous Rail for the entire length of the road, without break at the ends of bars, the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effects upon Cars and Machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at Hanging Rock Iron Works, upon the Ohio River, and at Mt. Savage Iron Works, Maryland. Specimens of the Rail and patterns of the same will be gladly shown, as well as information in relation thereto, given by application to

A. S. WINSLOW, Nos. 9 & 11 West Second Street, bet. Main and Walnut Sts., CINCINNATI.

WHEELBARROWS!

ON hand, Wheelbarrows, of my own manufacture suitable for Railroad, Turnpike, Canaling, etc., in lots to suit purchasers. Orders filled for any reasonable amount.

HENRY RCCKEY,
jy. 20. No. 21 East Front st.

CAR MANUFACTORY,
Dayton, Ohio.

E. THRESHER & CO., having enlarged their shops, are prepared to contract on favorable terms, for building every variety of railroad Cars, in any quantity and on short notice, made of the best materials, and of the most approved workmanship.

They are prepared also to furnish jaws and boxes; the Washburn Wheel, 30 and 33 inch, adapted to inside or outside bearing; cast iron frogs, steel plated; and switches of the most approved patterns.

They also manufacture blacksmith tuyeres, Harris' Patent; portable bolt forges: bolt heading and bolt cutting machines; upright drills, wheel presses; wood planers; tenoning and mortising machines, etc.

They respectfully invite the attention of railroad directors and superintendents to their establishment.

KENTUCKY LOCOMOTIVE WORKS.

CORNER OF KENTUCKY AND TENTH STS.

LOUISVILLE, KY.

THE Proprietors of the Kentucky Locomotive Works would respectfully inform Railroad Companies and the public generally that, having completed their establishment, they are now prepared to receive and execute orders with fidelity and dispatch.

They will contract for

Locomotives, Passenger, Baggage, Freight, Gravel and Hand Cars,

Of every style and pattern, as well as all kinds of Steam Machinery required for railroads.

Particular attention will be paid to repairing, which they have every facility.

They are also prepared to contract on favorable terms for building all kinds of Machine Tools, such as Turning Engines, Lathes, Planers, Drills, Slotting, Spliting, and Shaping Machines, of every variety of pattern.

Having also a large FOUNDRY connected with the establishment, orders for Castings are solicited, and will be filled with promptness.

Car Wheels of any pattern can be furnished on short notice. Double and single plate and Spoke Wheels of all sizes constantly on hand.

☞ Communications or orders must be addressed to

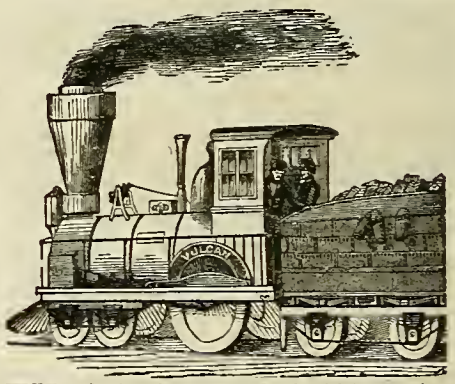
OLMSTED, TENNYS & PECK,
je.8-tf Louisville, Ky.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Resevoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.



The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,
PRINCIPAL AGENT,
May 18.6° Office, No. 167 Broadway, New York.

Cincinnati Locomotive Works!

THE undersigned are prepared to furnish Locomotives equal in efficiency and durability to the best Eastern manufacture. Also, Shaping and Slotting Machines suitable for railroad shops. Also, all kinds of heavy forging and casting done at short notice. Also, bolts for bridges cut with dispatch.

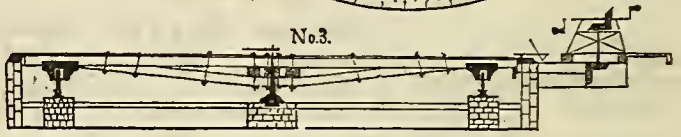
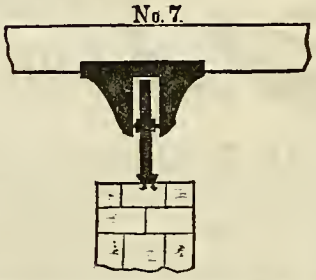
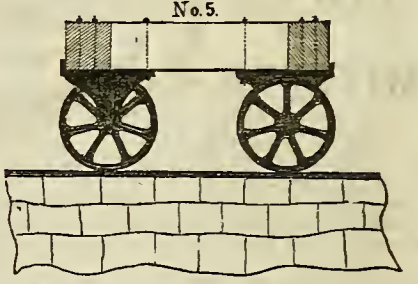
CARHART'S IMPROVED TURNTABLE.



Now building for 13 of the Principal Roads in Ohio, Indiana, New York, New Jersey, and North Carolina.





This Table, together with an Engine and Tender of 30 Tons Weight, can be Turned by One Man in 25 Seconds.

RAILROAD COMPANIES in want of *Turntables* of a permanent and durable character, at a low price, are respectfully referred to the annexed references. The undersigned being confident that the manner of turning engines by his Table is the most permanent, expeditious, and cheapest in the United States, solicits the attention of Engineers, and others, to his improvement. The undersigned being a practical mechanic, and having devoted his time, for the past five years, exclusively to the construction of Turn and Transfer Tables, Draw and other Bridges, is prepared with every facility for executing orders in that line with promptness and satisfaction.

The price, which is always based upon the use of the best materials and best workmanship which can be procured in the market where used, can be determiued only by the locality.

DESCRIPTION OF PLAN.

Fig. 1, of the above cut, represents the foundations, consisting of *Bank* and *Track Walls*, the latter made of cut, the former of hammer-dressed stone, with cut stone coping. The Track is bent of the ordinary T rail, spiked and leaded to the stone track walls. The Center Pier is made of cut stone, with a step for screw and pivot bolted to the same.

Fig. 2, shows the framing.

Fig. 3, is a side view of Main Truss, with the mode of gearing, including the mitre-wheels, iron crank frame, rack and pinion, foundations, pivot wheels and pedestals.

Fig. 4, gives a perspective view of rim, segments, decking, etc.

Fig. 5, is an end view of the main trucks, with pedestals and wheels.

Fig. 6, is a screw for pivot, 6 inches in diameter, working in a steel step through a nut for adjustment.

Fig. 7, shows a cross section of track wall, well, and pedestal.

Railroad Printing.

WE have now attached to this office an extensive Composition and Press Room and Bindery, under the personal supervision of the proprietors of the RECORD. With confidence, therefore, we call the attention of RAILROAD OFFICERS and others to our extensive establishment, containing every facility for turning out superior work in any and every department of the PRINTING BUSINESS.

We are fully prepared to furnish Railroad and other Reports, with or without Maps or other Illustrations, gotten up at short notice and in superior style. Also, Blanks of any description, adapted to the wants of the various departments of the Railroad service, and to the wishes and tastes of the parties.

Also, Railroad Tickets and Conductors' Checks. Our patent Card Press, enables us to supply any demand at Short Notice and in Unequalled Style.

Also, Blank Books, ruled to any pattern, with or without Printed Headings, and bound in the most substantial manner.

With the numerous facilities for doing the Best Work, we feel no hesitancy in promising full satisfaction to all who may favor us with their orders.

T. WRIGHTSON & CO.,
Rail Road Record Office, 167 Walnut st. Cin.

☞ Several Engineers on the Chicago & Rock Island Railroad having been discharged for bad conduct, endeavored to stop the working of the road by an attempt to frighten the Engineers in charge of the trains. For this they were arrested on a charge of conspiracy and were held to bail in sums of one hundred to one thousand dollars each.

THE WHEAT CROP OF 1854, AND THE INTERNAL TRADE IN GRAIN.

The newspapers of the country have till very recently been roundly asserting that the wheat crop, though failing palpably in several localities, is in the United States generally *an average crop.* This is a very great mistake, and the effect of the mistake is found in producing even higher prices than need have existed. As those who believed (that is the majority) in an average crop, looked for a fall of prices on the arrival of a new crop, there has been a reaction, consequent on the disappointment, till the wheat market is extravagantly high. But what is an *average crop?* In the United States we generally export flour and grain equivalent to about twenty millions of bushels. The White population consumes *five* bushels to *each individual.* The population on the 1st of June, 1849, (free) was 20,000,000, and has increased 500,000 per annum since, making an aggregate of wheat-consuming people on the 1st of June, 1854, of 22,500,000. At five bushels each, this people will consume in the current year 112,500,000 bushels of wheat. Add an ordinary export of 20,000,000, and an *average* crop would be 132,500,000 bushels. Have we raised it? It is quite plain we have not. Some states, it is true, have raised good crops; but several have not. Take Ohio for example. Ohio raises *one-fifth* of the wheat raised in the United States. In this state several of the best wheat counties have not raised half a crop. But this is not the worst sign. The great cause of failure is found in the *weight.* The threshing out of the wheat almost everywhere disappoints the farmer. Fields that looked full and yellow, and were well harvested, and counted at from 16 to 20 bushels per acre, thresh out only 10 or 12 bushels; so that the loss in this way will be very great. This is true in many parts of the United States; and that this is well understood by both our farmers and millers, is evident from the state of the grain market. Prices are actually *double* the average in Ohio. This is not a consequence of the *foreign* demand at all. 33 English shillings at Liverpool is only equal to $8 25 in New York, where flour is $9 25 per barrel. Our prices are now the results of the home demand. As they have risen very rapidly they *may* fall. But what if prices do fall? It is plain that the lowest rate they reach will be far above an *average* price, which at Cincinnati is not more than $4 50 per barrel.

When we add to this fact, the immense loss of human and animal food, in corn and potatoes, it is obvious that the export to Europe of breadstuffs and pickled meats, may be considered for the next year, as very nearly nothing, unless done at enormous prices.—But if it be so, it will teach a salutary lesson which our acute and shrewd merchants are very apt to forget; that is how little we are dependent on Europe for the great bulk of our trade; and how much of wealth we owe to the variety, extent and exuberance of our own magnificent country. We know Europe chiefly for the *evils* it brings—*debts, fashion vice, pauperism and crime.* We know our own country for the blessings it confers—*wealth, virtue, freedom and power.* If a year of bad crops shall teach us to cut off the former and adhere more closely to the latter, it will be well for our peace and prosperity.

At first sight it might be supposed that the business of railways may be diminished by the diminution of breadstuffs. But when we consider that this diminution falls on the amount sent abroad chiefly, and that the domestic supply, which is the basis of the Internal Trade, will still go on, we shall have no cause for apprehension. The following is a statement of the several classes of states *deficient,* to be supplied from those having *surplusses.* The latter estimated by *average* crops.

MANUFACTURING STATES DEFICIENT.

	Production. (*bushels.*)	Consumption. (*bushels.*)	Deficiency. (*bushels.*)
Maine	200,000	3,000,000	2,700,000
Vermont	500,000	1,575,000	1,075,000
N. Hampshire.	200,000	1,589,000	1,389,000
Massachusetts.	50,000	4,950,000	4,900,000
Connecticut	50,000	1,852,000	1,802,000
Rhode Island	.....	737,500	737,500
New York	14,000,000	16,000,000	2,000,000
New Jersey	1,600,000	2,450,000	850,000
8 Manufacturing States	16,700,000	32,153,500	15,453,500

Here are eight manufacturing states, having a population of over six millions, who must each year *buy fifteen millions of bushels of wheat!* All this wheat (or its equivalent, flour) must be carried over the railroads and canals of the West. More than a million of barrels of flour from the West, enter the Port of Boston alone. Then, there are New York, New Haven, Portland, Providence, Portsmouth, etc., each of which receives large amounts.

COTTON PLANTING STATES DEFICIENT.

	Production (*bushels.*)	Consumption. (*bushels.*)	Deficiency, (*bushels.*)
South Carolina	1,050,000	1,450,000	400,000
Georgia	1,110,000	2,700,000	1,600,000
Alabama	300,000	2,200,000	1,900,000
Mississippi	150,000	1,500,000	1,350,000
Louisiana	.....	1,400,000	1,400,000
Arkansas	200,000	800,000	600,000
Texas	100,000	800,000	700,000
7 States	2,900,000	10,850,000	7,950,000

Here are seven cotton-planting states of the South-West, which must buy about eight millions of bushels of the grain-growing states. Here, then, we have *fifteen* states which are so deficient in wheat, that they must *buy of other states twenty-three millions of bushels.* Now, from what states do they buy? The following table will show:

GRAIN-GROWING STATES—SURPLUSSES.

	Production. (*bushels.*)	Consumption. (*bushels.*)	Surplus. (*bushels.*)
Pennsylvania	15,000,000	12,000,000	3,000,000
Maryland	4,500,000	2,500,000	2,000,000
Virginia	12,000,000	5,000,000	7,000,000
Ohio	24,000,000	10,000,000	14,000,000
Indiana	9,000,000	5,000,000	4,000,000
Illinois	9,500,000	4,500,000	5,000,000
Michigan	5,000,000	2,000,000	3,000,000
Wisconsin	4,500,000	2,000,000	2,500,000
8 Grain-Growing states	83,500,000	43,000,000	40,500,000

The other states, not mentioned, are nearly equal in their production and consumption.

In the above statement we see that it is the Central states that produce the great bulk of breadstuffs, and supply in a great measure, all the Atlantic states, both North and South.—We see also how vastly the internal trade predominates over the foreign, which will be still more clearly illustrated by an exhibition of the Internal Trade in Provisions and Manufactures.

PROPER INDIGNATION—IRON DUTIES.

Messrs. *Reeves, Buck & Co.*, manufacturers of iron in Philadelphia, say that they find "several" numbers of our paper on their table; and, as it is against their *private interests* to encourage such articles as ours, on the remission of Iron Duties, they want their bill, and wish to be struck off our list.

On inquiry, we find, that Messrs. Reeves, Buck & Co., were never subscribers to the Record; but, that one or two numbers were sent them to look at. There is, therefore, no bill to be sent them, and no tax to be levied on their private purse. Messrs. R., B. & Co., are very much mistaken in supposing that we wish to *crush* iron manufacturers.—On the contrary, there is no interest in the country we would go farther to support. Nor have we the least idea, that a remission of duties on railway iron, for a short period, would seriously injure the iron interests.—But, let us ask Reeves, Buck & Co., what protection *they* actually receive at this moment? Railway iron is in England $42 per ton; it is in this country $70 per ton.—Messrs. Reeves, Buck & Co., have at this moment a *protection* fully equal to 65 per cent.—say 60 per cent—one-half, (30 per cent.,) from the Government, and the other half in freight and charges. We would say that the private interests of Messrs. Reeves, Buck & Co., were tolerably well protected; nevertheless, it is no more than proper indignation for them to repel an attempt, (if we had made any such,) to tax them, at any such rate, against their will.

Indianapolis & Peru Railroad.—At a meeting of the stockholders of this road, held at Noblesville on the 12th inst., the following gentlemen were elected Directors for the ensuing year:

Samuel M. Strader, Nathan Powel, Madison; John Wooley, Willis W. Wright, John Burke, David Macy, Indianapolis; E. Nottingham, H. G. Finch, Noblesville; E. M. Sharp, Sharpsville; C. D. Murray, John Bohun, Kokomo; A. A. Cole, Ira Mendenhall, Peru.

At a subsequent meeting of the Directors the following gentlemen were elected officers:

President, Samuel M. Strader; Secretary, Theo. P. Haughey; Treasurer, John Woolley; Superintendent, E. G. Barney.

Railroads.

OHIO RAILROADS.

The Railroads in this State are still progressing with considerable rapidity, notwithstanding the great difficulties thrown in the way by the want of money and the high price of labor and materials. Among the works just finished, or progressing, are the following:

1. The Central Ohio Railroad is, we are informed, just about finished to its junction with the Baltimore & Ohio Railroad, on the Ohio River. This makes a new and continuous route to the Eastern citis, *via* Baltimore. It will be formed thus—

Little Miami Railroad to Xenia	64	miles.
Xenia & Columbus to Columbus	54	"
Central Ohio Railroad to Ohio river	140	"
Baltimore & Ohio Railroad to Baltimore	380	"
Cincinnati to Baltimore, via Wheeling	634	miles.
Cincinnati to Philadelphia, via Baltimore	727	miles.
Cincinnati to New York, via Baltimore	810	"

2. The Cincinnati and Marietta Railroad will in a few days be opened from Cincinnati to Chillicothe. The route will be formed thus—

Little Miami Railroad to Loveland	23	miles.
Hillsborough Railroad to Blanchester	15	"
Marietta Railroad to Chillicothe	55	"
Total	93	miles.

This will make a communication between Cincinnati and the heart of the Scioto Valley. Thence, the road is graded entirely to the mineral region, and will soon be ironed.

3. The Cincinnati and Dayton Short Line, is still in progress, although proceeding slowly.

4. The Cincinnati, Lebanon and Xenia Straight Line, is under way.

5. The Dayton, Xenia and Belpre, is still going on.

6. The Western road, united with the Cincinnati, Logansport and Chicago, is in progress.

7th. The Ohio and Indiana Railroad, has just been completed to Van Wert, and will soon be opened through to Fort Wayne, thus making a direct communication from Philadelphia to that city.

There are a number of other roads in the upper part of the State, of which we have not full information, which we know to be in progress. The recent panic, united with the almost total paralysis in the movement of Railway Bonds, has certainly prevented the *rapid* progress of Ohio railways; but they have not prevented the completion of many—nor will anything arrest the determination of the people of Ohio to go on with all the roads they have planned, or deem necessary to the public business and convenience. The State has already reaped an immense harvest from railroad enterprises, and the dividends which will hereafter be declared, will raise most of our stocks to a point sufficiently high to command their sale. In a very short time, at most a year or two, the Ohio system of railroads will not only be among the wisest, but the most profitable of all the public enterprises in our country.

SAVANNAH RIVER VALLEY RAILROAD.

We have before us a copy of the Engineer's report of this railroad, under date of April 20th, 1854, for which we are indebted to J. J. Blackwood, Esq., of Hamburg, S. C.

This line runs through a wealthy portion of South Carolina, along the valley of the Savannah River, northwardly from Augusta to a connection with the Rabun Gap road at Anderson, 93½ miles, thus opening a direct communication for that city with Tennessee, Western Virginia and Kentucky, and through this latter state with Cincinnati. It will be of great importance to Augusta, and make that city a strong competitor for Charleston to contend with.

The line of the road as surveyed presents no obstacles to easy construction. The length of the line is 93½ miles, which can be reduced to 92, and is only 9½ per cent. over a perfect air-line; which, compared with several other Southern roads, is highly favorable, thus:

The length over a straigbt line—

From Nashville to Columbia, is	25½	per cent.
" " " Hamburg	11½	"
" Columbia to Charlotte	28	"
" " " Greenville	47	"
" " " Anderson	28	"
" Augusta to Atlanta	35	"
" Savannah to Macon	27	"

The estimated cost, completed and equipped, is $1,811,270, being a first class road in every particular, with a road bed 18 feet wide in excavations, and 14 feet upon embankments; rails to be 55lbs. per yard. The maximum grade has been fixed at 52.8 feet per mile, ascending from the sea-board, and 45 feet in the other direction. The maximum either way can be reduced, by additional expense, to 42 feet. Minimum radius of curvature 1910 feet. The right of way will be readily conceded gratuitously by the planters on the line.

This road will shorten the distance between Augusta and Savannah and Knoxville very much, and must tend to increase the trade of Augusta by placing her in direct communication with the wealthy portions of South Carolina, from which the want of transportation facilities has heretofore cut her off. We trust that the means to build this road may be readily found, and that Augusta will soon re-assume the station she once held as the Emporium of trade for that section of country. We have a strong predilection for that beautiful city; a number of the earlier years of our life were passed in that place, and the memory of it hangs around us still.

Dayton and Michigan Railroad.—The directors of the Dayton and Michigan Railroad met at Dayton yesterday and determined to move the office of the company from Troy to Dayton. It was also resolved to build a warehouse to accommodate the freight business of the road at Dayton.

INDEPENDENCE RAILROAD, VA.

This is a line of road intended to connect Cincinnati directly with Baltimore, via Marietta, the North-western Virginia and the Baltimore & Ohio Railroads. The western terminus is fixed by the charter at Williamstown, Virginia, on the Ohio river, directly opposite Mariettta; the eastern terminus was not defined, except that it should be some point upon the North-Western Road.

Three lines have been run, respectively 19, 25¾ and 28 miles in length. The latter has been adopted as giving the greatest distance that can be advantageously made in trade and travel between the Ohio valley and tide water at Baltimore. The point selected as the Eastern terminus, is known as Williamson's, 28 miles from Marietta, and 39 from Parkersburg; making the total distance from Cincinnati to Baltimore, over this line 556 miles, being 7 miles less than via Belpre and the Parkersburg road; and 84 less than by way of the Central Ohiu road and Wheeling.

There will be two tunnels on this line, and the grades will not reach 75 feet per mile.—The curves are favorable, being in almost every case at a grade.

The surveys of the banks of the Ohio for a suitable point for a bridge have resulted in the finding of a favorable site near the mouth of the Muskingum, at an elevation of 120 feet above low water mark, being above the requirements of the Supreme Court in the case of the Wheeling Bridge. The cost is found to be much less than was anticipated, the bridge and approaches probably not exceeding $520,000, which is $180,000 less than the estimated cost at Walker's Crossing, 8 miles below Parkersburg.

By the requirements of the charter the work must be commenced within two years from the passage of the charter; consequently it is the intention of the Board to proceed at an early day to put some of the heavier portions under contract, and thus, not only comply with the requirements of the charter, but place the most difficult portions of the line in a state of progress that will enable the whole to be urged to an early completion, whenever it shall be deemed proper and necessary.

New York & Harlem Railroad.—Mr. Nicholas Dean has been unanimously elected President of Harlem Railroad Company.—The transfer books of the Preferred stock of this Company were to be opened on the 13th inst. The Directors, in compliance with the resolutions of the stockholders' meeting, have retired the amount of over-issued Preferred stock which could not be directly indicated as false stock; that in the hands of the parties who received it directly from Kyle, has not been retired, and the transfer of it will not be allowed. The action of the company in regard to this stock is reserved for the present.

MEMPHIS & LITTLE ROCK RAILROAD.

From the Arkansas *Whig* we learn that this important line is progressing very favorably.

The city of Memphis, and her citizens have subscribed $650,000, and the city is pledged for a further subscription of $550,000, as soon as the road is completed to the St. Francis river, making a total city subscription of $900,000. The Memphis Land Company has put in 50,000 acres of land, lying on the line of the road, valued at $500,000. The agent who is obtaining subscriptions along the line of the road reports his success as very flattering, as far as he has proceeded.

Some controversy has been had about the negotiation of the bonds of the city of Memphis; this has been settled, and the bonds have been negotiated.

Under these favorable pecuniary circumstances, the friends of the road are sanguine that it will be completed at an early day. It is a very important road for Arkansas, opening a direct communication for the transportation of produce to markets heretofore inaccessible, and bringing Little Rock, the Capital, within hailing distance of the eastern and north-eastern cities.

We wish the road all success, and hope that there will be no mistake in the financial arrangemets, thus compelling a suspension after commencement. We hope for better things, however; this is one of those necessary roads which should find the means of construction at home, and thus become a certainty.
